

BlueSpice 2.27.3

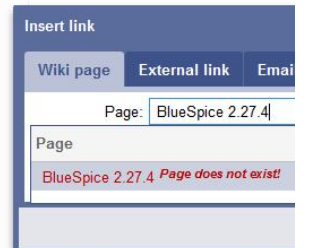

BlueSpice 2.27.3 is a patch release. The version 2.27.3 was published on Wednesday, 18th April 2018.

Notable new features

ArticleInfo: The display of all subpages is now sorted in a meaningful way.

The link wizard **InsertLink** now informs users whether the desired page to be linked exists.

Namespaces can now also have hyphens in their names.

The **InsertMagic** wizard (which you can use to insert tags, switches and variables) now offers the possibility to give users a list of the most important tags to prevent longer searches ("Quick access").

Insert magic word or tag

1. Choose tag or magic word

Quick access|

Tags

Behavior switches

Variables

Quick access

Bookmaker - Mass add: Assign many pages to a book at once using the "Mass add" function in the bookmaker. You select the pages of a category or the subpages of a page and only have to sort the added pages. It is also possible to search for pages and export the search results and import them into the book.
