

BlueSpice pro

BlueSpice pro

- The
professional
business
solution

BlueSpice pro offers everything you could expect from a business-critical solution. In contrast to BlueSpice free, BlueSpice pro is the comprehensive, business-critical and subscribable BlueSpice version. Find out more on the [BlueSpice Website](#).

BlueSpice pro packages

Bookmaker

- Compile articles to books and export them as pdf- or docx-file
- Chapter navigation in the wiki
- Export with cover, clickable table of contents, and all attached files

Teamwork

- Create review workflows and define workflow processes
- Edit articles in draft mode
- Publish new or changed articles after approval

VisualDiff

- Compare versions in three different views: classic comparison, wiki-code, or visual
- Colored highlighting of all changes

DocumentManager

- Assigning namespaces and manage view rights for documents
- Open, edit, save Office documents directly from the wiki
- Manage the complete wiki in a separate file system
- Filter- and sortable file list with extended meta data

Reminder

- Schedule articles for revision
- Enter a reminder date and be reminded via notification in the wiki
- Mark articles as "expired"

SemanticData

- Entries with additional values (Meta data)
- Forms with pre-defined entry
- Initiate combined queries

WikiExplorer

- Filterable and sortable list of all articles in the wiki
- Filter for 17 categories, with information on e.g. approval or responsible editors

RatedComments

- Rate articles with up to 5 stars, and write a review
- Special page with filterable list of all rated articles

ServiceCenter

- Define search areas to refine user searches thematically
- Display the "Top 10" of most-searched articles

PasteImage

- Upload and insert pictures via drag & drop into an article
- Take and insert screenshots via the Print-button

ReadConfirmation

- Request or send read confirmations
- Quick overview of all confirmations
