### What is Showtime?

**Showtime** integrates a HTML video player.

### How to use Showtime?

Use the tag `<bs:showtime>Video.mp4</bs:showtime>` anywhere in an article to activate the player. Please note that you have to upload the video you want to show into your wiki first.

The following video formats can be displayed: **mp4, ogv, flv, webm**

### Optional arguments

You can configure the player with the following arguments:

Argument	Description	Type	
<i>width</i>	Width of the video	int	320
<i>height</i>	Height of the video	int	240
<i>autostart</i>	Automatically starts the video when the page is loaded	bool	false
<i>repeat</i>	Automatically repeats the video in a loop	bool	false

**Example:** `<bs:showtime width="640" height="480" autostart="true">Testvideo.mp4</bs:showtime>`

### Compatibility matrix

For technical reasons, not all video formats can be played in all browsers.

Format	Firefox	Chrome	Internet Explorer

mp4	yes	yes	yes
flv	yes	yes	yes
ogv	yes	yes	no
webm	yes	yes	no

**Please note:** due to VideoJS standards, the player is set back from HTML5 to Flash when playing an flv-file or using the Internet Explorer.
