BlueSpice 2.22.2 is a patch and maintenance release.

Changes since 2.22.1

extensions/BlueSpiceDistribution

- Renamed BlueSpiceDistribution.php to BlueSpiceDistribution.php.template

extensions/BlueSpiceFoundation

- i18n: fix spelling "occurred" (thanks to Yuki Shira)
- Userbox now has anyMatch as default to make it easier to work with real names
- Fixed BSMaintenance and TestMail
- Little work on maintenance scripts
- Fixed Fatal error: Using \$this when not in object context
- Implemented isSerialized method to StringHelper to avoid notice and warning
- Code cleanup in CoreHooks and StringHelper
- Added Title object as param to parseWikiText
- Added ParserOptions as a member of Core
- UserCombo now dies client sort on display_name
- Added fake RequestContext for current ContextSource implementation
- Fixed issue with overridden OutputPage
- Use options array of ViewBaseElement that options can be edited after initialization
- Added public getter to avoid PermissionManager JSON from breaking
- Keep transparency in uploaded user pictures
- Fixed sorting of getCategoryStoreData
- Added contributors
- Deleted copy of Html class
- Removed unnecessary code
- Deleted param in if statement in PageContentProvider
- Fixed ExtJS x-body font-size bug

- Fixed issue with bs user preferences that false or 0 values were treated wrong because of none type prove check
- Removed outdated installcheck.php
- Added js code from skin for multiselect
- Behaviour switch regex now uses 'si' modifier to allow multiple magicwords in one nowiki tag

extensions/BlueSpiceExtension

- i18n: Fix spelling: occurred (thanks to Siebrand Mazeland)
- Authors: Do not display IP Authors
- Authors: Changed display order of authors
- Authors: Fixed display of authors, more were displayed than limit
