Usage / features

The NamespaceManager is visible for users with admin permissions. The following actions are possible:

- Creating a namespace
- Editing a namespace
- Deleting a namespace
- Turning features for a namespace on or off:
  - Subpages: Activates the use of subpages, which introduce some hierarchical organization into wiki pages.
  - Content namespace: Contents from this namespace will be prioritized in the search results.
  - Category check: Warns users on page save that a page has no associated category.
  - Secured page assignments:
  - Page templates: allows page templates to be used.
  - Rating: displays a star-based rating option with the page title.
  - Recommendations: displays a recommendations icon next to the page title.
  - Read Confirmation: users that are assigned to this page need to confirm when they have read the page.
  - Approval: creates draft and approved versions of pages.
- Sorting, filtering, and exporting of the table grid

Technical Information

Configuration

This extension offers no configurations.

Rights (permissions)

Users must have the namespacemanager-viewspecialpage permission in order to change the namespace configuration.

Requirements

NamespaceManager requires BlueSpiceFoundation.

More info

For detailed description and usage, visit our help page.
Namespace manager

The Namespace manager allows a user with administrative rights to create, delete and rename namespaces and to change the settings of these namespaces. The interface for the user manager is provided by the extension BlueSpiceNamespaceManager.

### Accessing the Namespace manager

The navigation link to the Namespace manager is located under Global actions > Management. This link opens the page Special:NamespaceManager.
Creating a namespace

**To create a namespace:**

1. **Click** the "Plus" icon at the top of the page. A dialog opens.
2. **Enter** the name for the new namespace and select the namespace options.

![Creating a namespace](image)

3. You can activate the following options:
   
   1. **Subpages**: namespace can contain subpages (MediaWiki functionality)
   2. **Content namespace**: needs to be checked if users will create wiki pages in this namespace (MediaWiki functionality). See also mediawiki.org/wiki/Manual:ContentHandler.
   3. The remaining options activate a number of extensions for the namespace: CategoryCheck, Secured page assignments, PageTemplates, Visual editor, Rating, Recommendations, ReadConfirmation, Semantic MediaWiki, Approval.

The corresponding talk namespace for the new namespace is automatically created. The ID of each namespace is assigned automatically based on wiki settings and existing namespace IDs.

Editing and deleting a namespace

**Editing a namespace:** A namespace can be edited by clicking on the "wrench" icon in the table row or above the table when a namespace is selected.

Names of talk namespaces or of system namespaces (File, MediaWiki) cannot be changed.

**Deleting a namespace:** Only custom (user created) namespaces can be deleted.

After clicking on the delete icon, a dialog with the delete options appears.
Deleting a namespace

- **Will be deleted**: deletes the pages in this namespace together with the namespace
- **Will be moved into "(Pages)"**: moves the pages of this namespace into the main namespace
- **Will be moved into "(Pages) with the suffix "(from [namespace name])"**: moves and appends the pages with "from [namespace]"

Talk namespaces are deleted with their corresponding namespace and cannot be deleted separately.

Reference:BlueSpiceFoundation

The extension **BlueSpiceFoundation** is the interface between BlueSpice and Mediawiki. It provides basic functions for the individual BlueSpice extensions.

If you install any BlueSpice extension in a MediaWiki environment - that is outside of BlueSpice free or BlueSpice pro - the reference information for the extension will indicate if it requires BlueSpiceFoundation.
