### Usage / features

This extension provides a built-in browser confirmation dialog when leaving a page without unsaved changes.
Technical information

Configuration

Administrators can set the default recovery interval and whether to show the name of the current editor in the Config Manager.

Rights (permissions)

This extension does not require any special rights.

Requirements

SaferEdit requires BlueSpiceFoundation.

More info

For a detailed description and usage info, visit our help page.

Demo

You can try leaving a page without saving it in our BlueSpiceDemo.

GPL v3 only

Redirect to:
- [GPL v3]

Unsaved changes (autosave)

The extension SaferEdit automatically saves a page at predefined intervals.
How it works

Users can set their preferences under the tab Editing if they want to see a warning message when they leave the page without saving pending changes. This setting is activated by default.

Warning when leaving an unsaved page

Additional functions

- **Recovery versions**: The recovery versions are saved for the user and are only available to this user. They are not, however, deleted when logging off and are available when the user logs on again.
- **Edit conflicts**: If the page is currently being edited by a user, a banner at the top of the page shows the user name of the editor.
Tips

SafeEdit is useful when you have just accidentally closed a browser tab without saving your changes. If, however, you leave the page intentionally, i.e. you have saved the page or clicked on “Cancel” and confirmed the dialog that you want to leave the page with unsaved changes, then the existing recovery versions are deleted and are no longer available.

Configuration

In the Config Manager, administrators can change the following settings:

- **Interval for lookup for concurrent editings**: Sets the time in seconds for checking if another person is editing the page.
- **Show name of current editor**: Shows or hides the name of the user who is currently editing the page.

Related info

- Reference:BlueSpiceSaferEdit

Reference:BlueSpiceConfigManager

**BlueSpiceConfigManager** provides a special page that enables managing all global wiki settings in one place.

### Usage / Features

Once on the special page, all settings will be grouped by logical groups. There are three ways of grouping the settings:

- Feature - grouping by type of functionality setting belongs to (searching, administration...)
- Extension - grouping by the extension the setting is coming from
- Package - grouping by the package extension providing the setting comes from.

### Technical information

#### Rights (permissions)

This extension requires the right `bluespiceconfigmanager-viewspecialpage`, which is contained by default in the roles `maintenanceadmin`, `admin`, and `structuremanager`. 
Requirements

BlueSpiceConfigManager requires BlueSpiceFoundation.

More info

For detailed description and usage, visit our help page.

Reference: BlueSpiceFoundation

The extension BlueSpiceFoundation is the interface between BlueSpice and Mediawiki. It provides basic functions for the individual BlueSpice extensions.

If you install any BlueSpice extension in a MediaWiki environment - that is outside of BlueSpice free or BlueSpice pro - the reference information for the extension will indicate if it requires BlueSpiceFoundation.

Technical information

Requirements

This extension requires ExtJSBase.
