**Additionally required licenses**

BlueSpice is delivered free of legal defects and without hidden additional licenses. There is only one extension which charges an additional fee for the enhancement of the existing function:

- **PHPDOCX Pro**: This additional license is only needed if you want to use the export to DocX format.

**Extension\: Arrays**

**Overview**
- **Description**: Store and compute named arrays
- **State**: stable
- **Developer**: Li Ding, Jie Bao, Daniel Werner
- **Type**: MediaWiki
- **Edition**: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

The Arrays extension (formerly known as ArrayExtension) creates an additional set of parser functions [1] that operate on arrays [2].

**Extension\: Auth remoteuser**

**Overview**
- **Description**: Automatically logs-in users using the `REMOTE_USER` environment variable
- **State**: stable
- **Developer**: Otheus Shelling, Rusty Burchfield, James Kinsman, Daniel Thomas, Ian Ward Comfort, Mark A. Hershberger, Stefan Engelhardt
- **Type**: MediaWiki

**You've got any questions?** Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Overview
Edition: BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)
For more info, visit Mediawiki.

Features

The **Auth remoteuser** extension automatically logs-in users if they are already authenticated by an arbitrary remote source. The extension maps the given remote user name to an existing user name in the local wiki database (or creates it first if it has the permissions to do so). The external source takes total responsibility in authenticating that user.

This allows integration with the web server’s built-in authentication system (for example via the REMOTE_USER environment variable, which is set through HTTP-Auth, LDAP, CAS, PAM, etc.) or any other type of external authentication (SSL client auth, user accounts provided by different forum software, etc.).

Template: MWlink

Extension\: BlueSpiceAbout

Overview
Description: Information about BlueSpice
State: stable 
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Administration
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

AboutBlueSpice offers a wiki page to provide additional information from an external source, e.g. a page from a content management system.

The extension was developed for marketing reasons, so that people come via a link to an included external page. It is delivered with every edition of a BlueSpice MediaWiki distribution.

The extension inserts a link *About BlueSpice* in the main navigation. The content of the external page is embedded via an *Iframe*.

This link can be deactivated in the [[Reference:BlueSpiceConfigManager| ]].

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension: BlueSpiceArticleInfo

Overview

Description: Provides information about a page in status bar
State: stable
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Data Analysis
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

This extension provides additional information compared to the standard MediaWiki page information. In the Discovery skin, this information can be accessed in the page tools using the link all actions... >Page Information.

The following information is included:

- General Info
- Last edit
- Properties
- Expiry of page
- Authors of this page
- Readers of this page
- Reminder

**Extension**: BlueSpiceArticlePreviewCapture

**Overview**

- **Description**: Creates preview images of wikipages for dynamic file dispatcher
- **State**: stable
- **Dependency**: BlueSpice
- **Developer**: HalloWelt
- **License**: GPL-3.0-only
- **Type**: BlueSpice
- **Category**: Data Analysis
- **Edition**: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

**BlueSpiceArticlePreviewCapture** provides the ability to show current snapshots of wikipages as thumbnails throughout the wiki.
The ArticlePreviewCapture extension creates preview images (screenshots) of pages, which are displayed for example in the search results of the ExtendedSearch autocomplete function, in the Recent changes, the List of books and the Timeline.

This extension requires PhantomJS (Linux | Windows) to be installed on the server.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

**Type:** BlueSpice

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**View help page**

---

### Features

**BlueSpiceAuthors** displays the profile images of the users who have contributed to a wiki page. They are listed on the *Page information*, which can be accessed from the quality management tools.

- **Image selection:** The image shows the profile image that a user is currently using.
- **Avatar:** If a user has not uploaded a profile picture, a personalized avatar is shown.
- **Deleted users:** If users are not registered or were deleted since they made the contribution, an image with a yellow question mark is displayed.
- **Interaction:** Hovering over the profile picture shows the user name. The image links to the user’s profile page.

Users with admin rights can set in the **Config manager** if and how many authors should be shown on the page information. If there are more authors than configured, a pagination is being generated.

The display of authors can be supressed with the behavior switch `__NOAUTHORS__` on an individual wiki page. It can be placed anywhere in the source code.

---

### Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

#### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

#### Integrates into

### Overview

**Description:** Provides generic and individual user pictures  
**State:** stable  
**Dependency:** BlueSpice  
**Developer:** HalloWelt  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Category:** Personalization  
**Edition:** BlueSpice pro, BlueSpice free, BlueSpice Farm, BlueSpice Cloud  

### Features

**BlueSpiceAvatars** handles profile images of wiki users. Initially, every user has an automatically generated avatar.

This extension adds an option to each user's page to change his profile image. At the top of a user's page users can see their current profile image and the link "Userimage". Clicking on this link opens a dialog offering several options for setting a profile image:

- upload a new image
- link to an image that has already been uploaded
- generate a new avatar

### Technical Information

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

Bookshelf combines wiki pages to create books and also to export those pages as a PDF document.

- Sets of different pages (chapters) can be put together individually to a book.
- The table of contents of the book is displayed in the left navigation bar.
- The chapters are displayed in a collapsible tree structure.
- The book or parts of the book can be exported to PDF.

Configuration manager

Some aspects of this extension can be configured on Special:BlueSpiceConfigManager. Here, wiki administrators can:

- prepend the article table of contents and headlines of a page with book numeration.
- suppress the namespace prefix of book articles in the PDF output.
- apply the display title from the book source to a wiki page.

Skin: BlueSpiceCalumma

**Overview**

**Description:** BlueSpice Skin  
**State:** stable  
**Dependency:** BlueSpice  
**Developer:** HalloWelt  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

BlueSpiceCalumma is the responsive skin for BlueSpice 3. There is a user setting for the navigation panel (left panel) and the page tools panel (right panel) to switch the toggle behavior.

The value can be set as default value by an administrator and on the user level through the special page `Special:Preferences`. BlueSpiceCalumma is based on Bootstrap and the Wikimedia Chameleon skin.

**Extension**: BlueSpiceCategoryCheck

**Overview**

Description: Checks for assigned category before an article gets saved

State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Infrastructure
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
Features

With **CategoryCheck**, pages cannot be saved unless a category is assigned to a page. This extension reminds a user to assign a category to a page before saving it.

This functionality can be assigned to a namespace in the **NamespaceManager**.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension: BlueSpiceChecklist

Overview
Description: Provides checklist functionality
State: stable Dependency: BlueSpice
Developer: HalloWelt License: GPL-3.0-only
Type: BlueSpice Category: Rich Articles
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features
The extension Checklist allows inserting checklists and checkboxes for to-do lists with responsibilities and status settings.

The checklist extension inserts:
- single checkbox elements
- checklists based on templates with an unordered list

It is possible to add multiple checkboxes and/or checklists to a page.

Checklist changes are automatically marked as minor changes. This setting can be changed in the Config manager.

Technical Information

Extension\: BlueSpiceConfigManager

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Offers the possibility to admins, to configure the whole wiki from a single special page</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>beta</td>
</tr>
<tr>
<td>Dependency</td>
<td>BlueSpice</td>
</tr>
<tr>
<td>Developer</td>
<td>HalloWelt</td>
</tr>

<td>BlueSpice</td>
</tr>
<tr>
<td>Category</td>
<td>Administration</td>
</tr>
<tr>
<td>Edition</td>
<td>BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud</td>
</tr>
</tbody>
</table>

Features

BlueSpiceConfigManager provides a special page that enables managing all global wiki settings in one place.

Once on the special page, all settings will be grouped by logical groups. There are three ways of grouping the settings:

- Feature - grouping by type of functionality setting belongs to (searching, administration...)
- Extension - grouping by the extension the setting is coming from
- Package - grouping by the package extension providing the setting comes from.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

Extension\: BlueSpiceContextMenu

Overview
- Description: Provides context menus for various links
- State: stable
- Dependency: BlueSpice
- Developer: HalloWelt
- License: GPL-3.0-only
- Type: BlueSpice
- Category: Search and Navigation
- Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

ContextMenu replaces the default browser context menu with wiki functions - depending on the context and user permissions.
- Replaces the default browser context menu.
- Can be turned on or off by each individual user.
- Offers different content depending of the type of link that its being opened on and depending on the user permissions.

Some aspects of this extension can be configured in the User preferences, under the tab Appearance:
- Click on right mouse button and pressing CTRL (Normal right mouse button will show default browser menu).
Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Features

**CountThings** provides a set of tags for counting various metadata in the wiki. This information is displayed on the page as text or in a configurable table, depending on the chosen mode.

Tags made available by this extensions are:

- **countarticles:** displays the total number of articles on the wiki
- **countusers:** displays the total number of users registered on the wiki
- **countfiles:** displays the total number of files uploaded to the wiki
- **countcharacters:** available in multiple modes:
  - **Chars:** number of characters on the current page (based on the wiki code, including spaces)
  - **Words:** number of words on the current page
  - **Pages:** number of pages the current article would have if printed/exported
  - **All:** default mode – shows all the information above in a table

Extension: BlueSpiceCustomMenu

**Overview**

**Description:** Provides customizable menus

**State:** stable  
**Dependency:** BlueSpice

**Developer:**  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Category:** Search and Navigation

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Overview
Edition: BlueSpice pro, BlueSpice free, BlueSpice Farm, BlueSpice Cloud
View help page

Features

CustomMenu is a menu with configurable items. It appears as collapsible menu above the top navigation bar. The HTML output is an unordered list. Menu items can be modified by editing the page MediaWiki: CustomMenu/Header.

Syntax:

* html ID (has to be unique) | target page | label (optional)

The html ID can be used to apply CSS rules in MediaWiki:Common.css.

Examples:

1. A link to the Wiki page 'Intranet':

   * menuLink1 | Intranet

   The html ID 'menuLink1' is used to display the menu item, because no label has been specified.

2. A link to the Wiki page 'Intranet'. The visible label is 'Our Intranet':

   * menuLink1 | Intranet | Our Intranet

3. A Dropdown with link to the Wiki pages 'Intranet' and 'Demo'. The visible label of the menu is 'Hello World'. The dropdown contains 'Our Intranet' and 'Demo':

   * Hello World
   ** menuLink1 | Intranet | Our Intranet
   ** demoLink | https://en.demo.bluespice.com | Demo

BlueSpiceCustomMenu will be hidden on mobile devices. The width is restricted to the content width. It is limited to one line.

By default, there are only 2 menu levels (link text and one dropdown). More levels can be set, but it is tested only up to level 3. Further menus may be outside the browser window.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.
Requirements

Extension: BlueSpiceDashboards

Overview

Description: Provides dashboards for users and administrators
State: stable
Developer:HalloWelt
Type: BlueSpice
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
License: GPL-3.0-only
Category: Reporting

View help page

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

**Dashboards** consists of an admin and a user dashboard. It provides several portlets a user/admin can choose. Choose available portlets and integrate them in your dashboard.

Available portlets:

- Assignments
- Calendar
- Most active users (by edits)
- Most edited pages
- Most viewed pages
- My edits
- Number of content pages
- Number of edits
- Number of pages
- Number of users
- RSS feed
- WikiPage (custom portlets)

Extension\: BlueSpiceDrawioConnector

**Overview**

**Description:** Connects BlueSpice to Drawio  
**State:** stable  
**Dependency:** BlueSpice  
**Developer:** HalloWelt  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Category:** Infrastructure  
**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

BlueSpiceManual:Extension/DrawioEditorConnector enables the integration of the extension DrawioEditor into the BlueSpice framework.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension: BlueSpiceExpiry

Overview

Description: Pages can be marked as expired.

State: stable  Dependency: BlueSpice

Developer: HalloWelt  License: GPL-3.0-only

Type: BlueSpice  Category: Quality Assurance

Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

Expiry marks — after a certain period of time — a chosen article as "obsolete". The article can be updated by editing or by confirming that the article is still up-to-date. Expiry is the ideal basis for an archiving system. Outdated articles can be moved to an archive after being queried.

- An author can add an expiration date to an article.
- The expiry date can automatically be postponed to the future for a specific period of time.
- Several authors: There can only be one expiration date. The user who originally entered the expiration date will be informed of the change.
- There is no limit to the number of expiration dates with respect to users.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
- BlueSpiceReminder: 4.0

Extension: BlueSpiceExportTables

Overview

Description: Allows export of tables to Excel and CSV
State: stable  Dependency: MediaWiki
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Export
Overview
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

ExportTables allows exporting tables on wikipages and grids with tabular data.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

Extension\: BlueSpiceExtendedFilelist

Overview

Description: Provides a special page to interact with the wiki file repo
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Document Management
Overview
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

The extension BlueSpiceExtendedFilelist provides a special page to interact with the wiki file repo. It features a friendly user interface that allows sorting and filtering by a variety of fields.

- ExtendedFileList contains a list with files.
- While typing a search string in the search filter, the number of listed files is reduced.
- If there are many results, these are shown on several pages. The maximum number of results per page can be set.
- Columns with different information can be toggled on and off. The columns can be (ascending /descending).
- Columns can be filtered.
- An upload button allows uploading files.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Overview

Description: Elasticsearch search backend
State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Search and Navigation
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

ExtendedSearch replaces the default MediaWiki search engine. It is based on ElasticSearch engine, and provides many improvements over the standard MediaWiki search both in terms of quality of indexed content and user interface.

- Search titles.
- Search the full content.
- Search uploaded or linked files (Office documents and PDFs).
- Search image data.
- Search-as-you-type and auto-complete.
- Ignore upper and lower case (case-insensitive).
- Search with the operators AND, OR, NOT.
- Search with wildcards.
- Search for phrases.
- Fuzzy search.
- Search for sentence fragments.

Some aspects of this extension can be configured on Special:BlueSpiceConfigManager, under section "ExtendedSearch". Here wiki administrators can configure:

- external file paths
- layout of the autocomplete box
- language filter
- exclude patterns

Configuration (server)

For boosting by match percent, the following settings are available in the extension itself:

```
"ESMatchPercentBoostFactor": { 
  "description": "How much to boost the result based on the percent of its title taken up by the search term. Set to 0 to disable",
  "public": false,
  "value": "0.5"
},
"ESMatchPercentTitleField": {
```
Description:

- **ESMatchPercentBoostFactor**: The value here is multiplied by the the match percent and by the score of the document. Example: The search term is "Test". The search finds for example "Testpage" and assigns a score of 20 to this result. Your search term matches 50 percent of the found name, so its match factor is 0.5. This factor is then multiplied by the value in this setting (by default 0.5), which gives the total boost factor of 0.25. The final score is calculated as "original score + (original score * boost factor)" = 20 + (20 * 0.25 ) = 20 + 5 = 25. This means that because your search term matches 50% of the result, it got boosted by the factor of 5.

- **ESMatchPercentTitleField**: Field on which the match analysis is performed. Defaults to nothing, so whatever the search lookup sets. It can be set to "prefixed_text" to calculate match percent on the title with namespace prefix, for example, or to something like "basename" to calculate the match percent only on the page name, without the namespace prefix.

<td>Reporting</td>
</tr>
<tr>
<td>Edition:</td>
<td>BlueSpice pro, BlueSpice Farm, BlueSpice Cloud, BlueSpice free (deactivated)</td>
</tr>
</tbody>
</table>

Features

ExtendedStatistics provides an analytic view of many relevant parameters on the wiki, providing wiki administrators better insight into the usage of the wiki.

ExtendedStatistics can be accessed from the page Special:ExtendedStatistics.

It offers analysis of many aspects of wiki, like:

- Number of users.
- Number of pages.
- Edits per user.
- Search queries and more.

This data can be filtered:

- By defining the period (from and to date).
- Granulation (interval to show on diagram - day, week, month, year).
- Type (absolute, aggregate and list modes).
- Additional filters depending of the data being represented.

Some aspects of this extension can be configured with the Config manager, under ExtendedStatistics. Here, wiki administrators can configure:

- the users to exclude from statistical analysis
- the maximum number of interval steps

Extension: BlueSpiceFoundation

Overview
Description: Makes MediaWiki enterprise ready
State: stable Dependency: BlueSpice
Developer: HalloWelt License: GPL-3.0-only
Type: BlueSpice Category: Infrastructure
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

The extension BlueSpiceFoundation is the interface between BlueSpice and Mediawiki. It provides basic functions for the individual BlueSpice extensions.

If you install any BlueSpice extension in a MediaWiki environment - that is outside of BlueSpice free or BlueSpice pro - the reference information for the extension will indicate if it requires BlueSpiceFoundation.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- ExtJSBase: 1.31
- OOJSPlus: 0.2
Integrates into

- BlueSpicePrivacy

Special pages

- SpecialCredits
- WikiAdmin

Overview
Administration interface for adding, editing and deleting user groups and their rights

Description:
Administration interface for adding, editing and deleting user groups and their rights

State: stable
Dependency: BlueSpice

Developer: HalloWelt
License: GPL-3.0-only

Type: BlueSpice
Category: Administration

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

GroupManager allows to create new groups, and to edit and delete existing groups.

Using the group concept, you can soften the wiki principle to work with a more granular permissions model. Using groups, administrators can assign different permissions to users. For example, a group can have read permissions, but no edit permissions. Use the group concept wisely, since otherwise the cooperative dynamic suffers.

With the Group manager, you can:

• create groups
• edit groups
• delete groups (system groups cannot be deleted or edited)

Users are assigned to groups in the User manager. Permissions are assigned to groups in the Permission manager.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.
Requirements

Extension:\ BlueSpiceHideTitle

Overview

Description: Adds the magic word `\"`\`UNIQ--nowiki-00000214-QINU\`\`\` to hide the title of the page
State: stable  
Developer: HalloWelt  
Type: BlueSpice  
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

License: GPL-3.0-only  
Category: Rich Articles

Features

**HideTitle** enables hiding of the title on the page, if it’s necessary.

To hide a page’s title, use __HIDETITLE__ anywhere in its source code.

Changing an existing article’s title completely is not possible that way, but you can move the article to have the correct title.
Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

**Requirements**

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

**Integrates into**

- BlueSpiceVisualEditorConnector

**Special pages**

**Hooks**

- BSInsertMagicAjaxGetData
- BSUsageTrackerRegisterCollectors
- BeforePageDisplay
- GetDoubleUnderscoreIDs

Extension: BlueSpiceInsertCategory

**Overview**

**Description:** Dialog to enter a category link

**State:** stable  **Dependency:** BlueSpice

**Developer:** HalloWelt  **License:** GPL-3.0-only

**Type:** BlueSpice  **Category:** Editor

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

**InsertCategory** allows to add categories to a page in view mode or in visual edit mode.

This extension is in use in the page information flyout, in the title section and in the multi-upload dialog.

Some aspects of this extension can be configured on Special:BlueSpiceConfigManager, under section "Insert category". Here wiki administrators can configure:

- whether to set the page categories as default in the file upload dialog
- whether to insert a category with its parent category
**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

### Integrates into

**Extension**: BlueSpiceInsertFile

**Overview**

**Description**: Dialog to upload files and insert a file link

**State**: stable

**Developer**: HalloWelt

**License**: GPL-3.0-only

**Type**: BlueSpice

**Category**: Editor

**Edition**: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
Features

InsertFile extends the Insert media dialog of VisualEditor, providing an advanced interface for inserting files and images in the page. It offers direct file upload from the edit mode.

- Search for uploaded files and insert them.
- Filter files with a search box. Filtering files by namespace is possible, but requires the extension NSFileRepo.
- Upload a new file, assign categories and insert it.
- Configure file link parameters before inserting the file link of page: Set a caption for the link and choose a link type (link to media page or direct download link).

Extension: BlueSpiceInsertLink
Features

BlueSpiceInsertLink offers a dialogue to insert links without using wiki code.

Links are inserted from the menu item Link in the visual editor toolbar.

Users can link the following targets:
- other wiki pages (with autocomplete function)
- external websites
- files uploaded to the wiki
- files on a network drive

Extension: BlueSpiceInsertMagic

Overview
Description: Adds a dialog allowing the insertion of magic words and tags
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Editor
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

InsertMagic provides a dialog for inserting Magic Words in VisualEditor.

You can open the dialog box in visual and source editing modes from the editing toolbar. A selection of tags and magic words is offered. After inserting a tag on the page, further parameters can be set.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

Integrates into

- VisualEditor

Extension: BlueSpicInsertTemplate

Overview
Description: provides a dialog interface to add and modify templates in edit mode. A preview can be shown.
State: stable
Developer: HalloWelt
Type: BlueSpice
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

BlueSpicInsertTemplate extension provides a dialog interface to add and modify templates in edit mode. A preview can be shown.

- Integrates into Extension:BlueSpiceVisualEditor
- Integrates into Extension:BlueSpiceExtendedEditBar

Extension: BlueSpicInterWikiLinks

Overview
Description: Administration interface for adding, editing and deleting interwiki links.
State: stable
Developer: HalloWelt
Type: BlueSpice
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
View help page

Features

The extension InterWikiLinks simplifies linking to other wikis. Through this extension, administrators can create the abbreviations for different external wikis using a special page.

Usage / features

This extension provides the following functionality:

- access to the page Special:InterWikiLinks
- add new interwikilink
- delete interwikilink entries
- assign URLs to interwiki link entries
- sort entries
- export entries
Technical information

Interwikilinks are saved in the Mediawiki table `interwiki`. An Interwikilink essentially consists of assigning a link name (prefix) to an URL. Keep in mind that the link name must be only one word.

Configuration

This extension offers no configurations.

Rights (permissions)

Users must have the `interwiki-viewspecialpage` permission to view the list of interwiki links. This permission is by default assigned to the roles `editor`, `admin`, and `maintenanceadmin`. To edit the list, users need `wikiadmin` permissions. This permission is by default assigned to the roles `admin` and `maintenanceadmin`.

Requirements

InterWikiLinks requires BlueSpiceFoundation.

More info

For detailed description and usage, visit our help page.

Demo

Try inserting interwiki links in our BlueSpiceDemo.

Extension: BlueSpiceInterwikiSearch

Overview

Description: Simultaneous search in multiple wikis
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL v3
Type: BlueSpice  Category: -
Edition: BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

View help page

Features

`InterwikiSearch` allows simultaneously searching other BlueSpice 3 wikis when performing a search on the wiki.

Usage / features

If BlueSpiceInterwikiSearch is enabled and configured on the wiki, every time user performs a search using the `Special:SearchCenter`, results from other wikis will be shown as well. Results from other wikis will be shown at the top of the page, below the filters, in form of Wiki name (number of results) buttons.
Technical information

Configuration

To set up this service, wiki administrator must add following settings into LocalSettings.php:

```php
$GLOBALS['bsgBlueSpiceInterwikiSearch']['Wiki name'] = [
    "name" => "Wiki name", // Will be displayed as the wiki name in the results
    "api-endpoint" => "http://other.wiki.com/api.com",
    "search-on-wiki-url" => "http://other.wiki.com/Special:SearchCenter" // URL to the SearchCenter SpecialPage on target wiki
];
```

Rights (permissions)

This extension does not provide any additional permissions.

Requirements

This extension requires BlueSpiceFoundation and BlueSpiceExtendedSearch.

More info

For detailed description and usage, visit our help page.

Demo

Try out InterwikiSearch in our BlueSpiceDemo.

Extension: BlueSpiceRenderer

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Renders LaTeX markup on a Windows server.</th>

</tr>
<tr>
<td>Edition</td>
<td>BlueSpice pro, BlueSpice Farm, BlueSpice</td>
</tr>
<tr>
<td></td>
<td>Cloud</td>
</tr>
</tbody>
</table>

Features

The extension LaserRenderer shows math formulas by rendering LaTeX markup as images on a Windows server.
Usage / features

This extension provides the following functionality:

- add a formula in edit mode like
- use the VisualEditor Math menu item to insert complex formulas
- the output of the formula in view mode is a png image

Technical information

This extension corresponds to the Math extension that is used to render LaTeX formulas on a Linux server.

Requirements

This extension requires Apache Tomcat Server.

</tr>
</tbody>
</table>

Features

BlueSpiceMatomoConnector provides an interface between BlueSpice and the open source Matomo analytics tool.

Usage / Features

This extension allows to add a Matomo URL to the wiki using the wiki's configuration manager.

Technical information

Configuration

See configuration manager.
Rights (permissions)

To access the configuration manager, users need admin permissions. This extension does not provide any new permissions.

Requirements

BlueSpiceMatomoConnector requires BlueSpiceFoundation.

Overview

Description: Provides batch uploading of files
State: stable Dependency: BlueSpice
Developer: HalloWelt License: GPL-3.0-only
Type: BlueSpice Category: Administration
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

BlueSpiceMultiUpload enables users to seamlessly upload multiple files to the wiki. By clicking on the Upload file link in the main navigation, the operating system's upload dialog opens. Multiple files can be selected.

After confirming the selection of files, a wiki upload dialog appears. Here, it is possible to add additional data such as:

- the namespace to upload to,
- category to attach to the files, and
- file descriptions.

All settings are optional.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension\: BlueSpiceNamespaceCSS

Overview

Description: Namespace specific styling
State: stable  Dependency: BlueSpice
Developer:HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Skinning
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

The extension **NamespaceCSS** allows users to use different CSS styles for different namespaces. This can be useful if you want to visually distinguish between different manuals or parts of your wiki.

It is possible to change the look of the wiki at the namespace level.

The CSS code is written to the contents of the `<namespace name>_css` page. The extension checks at each page call whether there is a CSS page for this namespace. This is then registered as a StyleSheet.

Example: MediaWiki:User_css affects all pages that are in the namespace User.

Technical Information

This information applies to BlueSpice 3 . Technical details for BlueSpice cloud can differ in some cases.
Requirements

Extension: BlueSpiceNamespaceManager

Overview

- Description: Administration interface for adding, editing and deleting namespaces
- State: stable
- Dependency: BlueSpice
- Developer:HalloWelt
- License: GPL-3.0-only
- Type: BlueSpice
- Category: Administration
- Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page
Features

NamespaceManager allows to manage all namespaces in the wiki. The NamespaceManager is visible for users with admin permissions. The following actions are possible

- Creating a namespace
- Editing a namespace
- Deleting a namespace
- Turning features for a namespace on or off :
  - Subpages: Activates the use of subpages, which introduce some hierarchical organization into wiki pages.
  - Content namespace: Contents from this namespace will be prioritized in the search results.
  - Category check: Warns users on page save that a page has no associated category.
  - Secured page assignments: Only assigned users can edit pages. By default, only users with reviewer or admin role can assign users. If pages are created by users with only edit rights, they cannot edit the new page after saving it unless they are later assigned to that page.
  - Page templates: allows page templates to be used.
  - Rating: displays a star-based rating option with the page title.
  - Recommendations: displays a recommendations icon next to the page title.
  - Read Confirmation: users that are assigned to this page need to confirm when they have read the page.
  - Approval: creates draft and approved versions of pages.
- Sorting, filtering, and exporting of the table grid

<td>BlueSpice</td>
</tr>
<tr>
<td>Category</td>
<td>Security</td>
</tr>
<tr>
<td>Edition</td>
<td>BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud</td>
</tr>
</tbody>
</table>

Features

**BlueSpicePageAccess** allows only a certain user group access to the page.

The restriction is achieved by inserting the tag pageaccess on a page. Access restriction per page is done on a group basis. "Access" here means all actions, including read and edit. To avoid that this mechanism accidentally blocks access for all users, users in the group "sysop" always have access to the page.

Example: <bs:pageaccess groups="editor" />

Extension\: BlueSpicePageAssignments
Overview

**Description:** Enables you to assign users or groups to a page

**State:** stable

**Dependency:** BlueSpice

**Developer:** HalloWelt

**License:** GPL-3.0-only

**Type:** BlueSpice

**Category:** Quality Assurance

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

**PageAssignments** allows to assign pages to single users or user groups. Assigned users are notified about assignment changes via email or internal notifications.

- Assign responsible users to a page.
- Assign individual users or groups.
- The responsible editor(s) for the page can be viewed in the flyout "Page assignments" in the quality management tools.
- Users can view their assignments on the page **Special:PageAssignments**.
- Users with **admin**, **maintenanceadmin** or **reviewer** rights can manage all assignments on the page **Special:ManagePageAssignments**.

Display assignments in the title section

The page assignments can be displayed in the title section of the page. Activate this page assignments display in **LocalSettings.php** (or in the php file in the d.settings folder):

```php
$GLOBALS['bsgBlueSpiceCalummaPageHeaderBeforeContentEnabledProviders'] = [ "pageheader-assignments" ];
```

Set the limit:

```php
$GLOBALS['bsgPageAssignmentsPageHeaderLimit'] = 25;
```

Assign all users (with option to exclude some users)

To activate the option to assign all users to a page, a group **everyone** can be created. For this, the following code needs to be set in `<bluespice-installationpath>/extensions/BlueSpicePageAssignments/extension.json`:

```json
"PageAssignmentsActivatedTypes": {
  "value": [
    "user",
    "group",
    "everyone"
  ]
}
```

This allows users to add the group **everyone** to a page assignment. Individual users can be excluded from the assignment by creating the file **MediaWiki:PageAssignments-everyone-blacklist**. Users can be added to this blacklist with using line breaks.
Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

**Hooks**

- **BeforePageDisplay**
Overview

Description: Displays a list of templates marked as page templates.
State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Content Structuring
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

BlueSpicePageTemplates allows users to create new pages from predefined templates to start with a basic page structure.

- Create a template (with headers, categories, boxes and other content) in the template namespace.
- Create a page template using the special page Special_PageTemplatesAdmin give the page template a name and a description.
- Each template should be assigned a template from the "Template" namespace that represents the structure of a document.
- Page templates can be assigned to a particular namespace, so that a certain template will only appear when creating pages in that namespace.
- The page template is shown as a choice when a new page is created.

Some aspects of this extension can be configured on the page Special:BlueSpiceConfigManager, under "Page templates". Here, wiki administrators can:

- Force a target namespace for the page that was created from the template
- Hide default templates

Overview

Description: Provides a personalized list of the last visited pages
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Personalization
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page
Features

**PagesVisited** creates a list of a user's recently visited pages.

- Adds a menu item for last visited pages in the BlueSpice Personal navigation menu.
- Users can also add a tag into any page to create a list of pages they have visited.

Extension: BlueSpicePermissionManager

Overview

**Description:** Administration interface for editing user rights  
**State:** stable  
**Dependency:** BlueSpice  
**Developer:** HalloWelt  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Category:** Administration  
**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

**BlueSpicePermissionManager** offers an easy and user-friendly way to manage user permissions on the wiki.
PermissionManager is for managing rights or permissions at a group and namespace level:

- Assignment of permissions to a user group.
- Display of permissions inherited from groups in the permissions hierarchy.
- Display of permissions blocked by another group.
- Assignment of permissions on a wiki level (applies to all pages in all namespaces) and on per-namespace basis, meaning that a user group can have certain permission in one namespace but still be denied the same permission in another namespace.

Some aspects of this extension can be configured on [Special:BlueSpiceConfigManager], under section "Permission manager". Here wiki administrators can configure:

- Backup limit: Defines, how many backups, which are created everytime the permission settings are saved, are stored.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

**Category:** Rich Articles

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

[View help page](#)

### Features

BlueSpice **Player** is a video player that enables you to play all the usual HTML5 video formats in your wiki.

- Activated with the `<bs: showtime>Video.mp4</showtime>` tag
- **Settings:**
  - change the size
  - start the video immediately (autoplay)
  - play the video in a loop
- Supported formats: mp4, ogv, flv and webm
- It is possible to include multiple videos on one page
- In IE and flv, the HTML5 player falls back to a Flash version (default in VideoJS)
- For compatibility reasons, `bs: jwplayer` is also supported as a tag

In the user settings ([Special:Preferences](#)) under Appearance, users can set if the videos should start automatically.

Overview

Description: Management page for user privacy settings
State: stable
Developer:HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Security
Edition: BlueSpice Cloud, BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

Features

The extension **Privacy** allows users to maintain their privacy and enables site maintainers to comply with the GDPR.

You’ve got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Users can:

- Request anonymization: The requests are directed to a site administrator for approval. If approved, the user is anonymized by the system.
- Request removal: The requests are directed to a site administrator for approval. If approved, the user is deleted from the system with all their data.
- Retrieve all data stored about them in the system.
- Give and revoke consent to the privacy policy.

It allows site administrators to:

- Manage anonymisation and deletion requests.
- Get an overview of the privacy policy and cookie consent of all users.

Extension: BlueSpiceRSSFeeder

Overview

Description: An extension to output valid RSS for every extension, which has a buildRss-function.
State: stable
Developer: HalloWelt
Type: BlueSpice
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
License: GPL-3.0-only
Category: Reporting

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

The extension BlueSpiceRSSFeeder introduces a special page that provides RSS feeds for many aspects of the wiki.

Feeds about the following changes are available from the special page RSSFeeder:

- Recent changes
- Own contributions
- A given wiki page
- Namespace
- Category
- Watchlist

Extension: BlueSpiceRating

Overview

Description: Provides a rating system
State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Communication
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

BlueSpiceRating enables users to rate a wiki page with up to five stars or to recommend the page. In the Namespace manager, wiki administrators can configure in which namespaces ratings or recommendations should be activated.

Rating

Users select a number of stars to provide their rating. Users can change their assessment at any time, by choosing less or more stars. The average evaluation as well as the number of assessments are displayed.

If a user rates the page multiple times, only the first assessment is counted. Subsequent ratings only change the average evaluation, but not the number of assessments.

Recommendation

Users click on a recommendation link to make the recommendation. Users can change their assessment at any time by recommending the page or by retracting their recommendation.

If a user recommends the page multiple times, only one recommendation is counted.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension: BlueSpiceReadConfirmation

Overview

Description: Extension to collect read confirmations for a page
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Quality Assurance
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

ReadConfirmation asks for confirmation that a page has been read by users who have a page assignment for that page.

When the feature is enabled for a namespace through the NamespaceManager, users who are assigned to a page see a checkbox at the top of the page. By clicking the checkbox, they confirm that the page has been read.

Page approval and read confirmation

If a namespace has the feature Approval activated at the same time, the read confirmation is triggered if a new draft page has been created. This can be changed server-side using LocalSettings.php. If a read confirmation should be triggered after the page has been approved and not when the draft is created, the following setting needs to exist:

```
$GLOBALS['bsgReadConfirmationMechanism'] = "\\BlueSpice\\FlaggedRevsConnector\\ReadConfirmation\\Mechanism\\PageApproved::factory";
```

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Dependency: BlueSpice

Developer: HalloWelt  
License: GPL-3.0-only

Type: BlueSpice  
Category: Data Analysis

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

The extension Readers displays the readers of a wiki page to users with admin rights.

- Displays the readers of a page in the page information flyout of the page tools.
- The special page Special:Readers/PageTitle creates a list of all readers of a page along with the user name and the date of the last visit.

Wiki administrators can set the number of readers to be shown in the page information flyout in the Config manager.

Extension: BlueSpiceReminder

Overview

- **Description:** Gives the user the opportunity to create reminders.
- **State:** stable
- **Dependency:** BlueSpice
- **Developer:** HalloWelt
- **License:** GPL-3.0-only
- **Type:** BlueSpice
- **Category:** Quality Assurance
- **Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page
Features

The extension **Reminder** allows users to keep track of pages by adding a notification date for themselves or for other users.

- Set a reminder date for yourself or for other users
- Make the date a recurring event
- View and manage a list of your personal reminders
- View a filterable list of all reminders on the wiki

In the user preferences, users can set if and how they want to be notified a week before the event and on the day of the event.

Extension: BlueSpiceSmartList

Overview

**Description:** Displays the last five changes of the wiki in a list

**State:** stable  **Dependency:** BlueSpice

**Developer:** HalloWelt  **License:** GPL-3.0-only

**Type:** BlueSpice  **Category:** Reporting

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

BlueSpiceSmartList introduces various tags that can be placed on any page to show a list of the most relevant pages based on different criteria.

The tag *newbies* shows the latest added user accounts. The *toplist* tag shows the most popular content pages.

The tag *smartlist* accepts the following parameters:

- categories to show
- whether to show comments
- number of results
- namespace
- sort order
- time period
- show minor changes
- show page title with namespace
- only show new pages
- show page content
- maximum length of the title (in characters)
- maximum length of the page content (in characters).

Extension: BlueSpiceSocial

Overview

Description: Base extension for social extensions
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Administration
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page
Features

BlueSpiceSocial is a group of extensions that add social media features to the wiki. This allows users to quickly communicate on the wiki and to express their opinions on pages more easily.

BlueSpiceSocial provides the architecture for all Social extensions. It contains base classes, SourceTitle namespace, SocialEntity ContentModel, notifications, etc.

This extension is required by all Social extensions. Without another Social extension (e.g., BlueSpiceSocialBlog), this extension has no effect.

The following Social extensions are available:

- SocialArticleActions
- SocialBlog
- SocialComments
- SocialMicroBlog
- SocialProfile
- SocialRating
- SocialResolve
- SocialTags
- SocialTimelineUpdate
- SocialTopics
- SocialWatch
- SocialWikiPage

Extension\: BlueSpiceSocialComments

Overview

Description: Comment functionality for BlueSpiceSocial
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Communication
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

BlueSpiceSocialComments provides the SocialEntity of type comment. Template:Box Note

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Social entities of type comment are automatically displayed with other social entities as a drop-down area by clicking on "Comments".

Not every SocialEntity can be commented (e.g., profiles). This is defined by the system or by a corresponding customization.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
- BlueSpiceSocial: 4.0

### Integrates into

### Special pages

### User options

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>

<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>Content of the comment</td>
<td>Wikitext or reduced VisualEditor, no full parser access</td>
<td>empty</td>
</tr>
</tbody>
</table>
Configuration

In their preferences, users can define if and how they are notified about comments on watched entities.

Extension: BlueSpiceSocialMicroBlog

Overview

Description: Microblog functionality for BlueSpiceSocial
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Communication
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

SocialMicroBlog provides the SocialEntity of type microblog. Template:Box Note

Microblog posts can be created on Special:Timeline by clicking the "plus" button. In contrast to blog posts, microblog post have no title, but consist only of their content.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
  BlueSpiceSocial: 4.0

Integrates into

Extension: BlueSpiceSocialProfile

**Overview**

**Description:** Profile entity for BlueSpiceSocial

**State:** stable  
**Dependency:** BlueSpice

**Developer:**HalloWelt  
**License:** GPL-3.0-only

**Type:** BlueSpice  
**Category:** Communication

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

### Features

**BlueSpiceSocialProfile** provides the SocialEntity of type profile. Furthermore, the user page is converted into a complete user profile. *Template:Box Note*

- the user page is converted into a complete user profile
- the content of the original user page is also shown as a description field below the profile section
- provides the page *Special:SocialProfiles*
- a user profile can be included in a page with the tag `<bs:socialentityprofile username="Testuser" rendertype="Short" />`
- users can update their profile information and upload a profile picture

### Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension\: BlueSpiceSocialResolve

Overview

Description: Resolve functionality for BlueSpiceSocial-entities
State: stable
Dependency: BlueSpice
Developer:HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Communication
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

SocialResolve provides the unresolved/resolved status for SocialEntities. By default, the status functionality is attached to entities of type topic (discussion entries). This extension adds a button to the social entity topic. Clicking it toggles the unresolved/resolved state of the topic. Closed social entities have a green background by default and their view type is changed to "Short". It is not possible to use this extension for social entities of type profile.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension:\ BlueSpiceSocialTags

Overview

**Description:** Adds tagging functionality to social entities
**State:** stable  
**Developer:** HalloWelt  
**Type:** BlueSpice
**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

**SocialTags** provides the option of linked pages to SocialEntities. Template:Box Note A social entity such as a discussion topic is linked to a wiki page. Users can update these page associations as needed.

The page Special:SocialTags shows a filterable list of SocialEntities that share the same tag. The function "watch" is automatically added to all social entities.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension: BlueSpiceSocialTimelineUpdate

Overview

- **Description**: Update functionality for BlueSpiceSocialTimeline
- **State**: stable
- **Dependency**: BlueSpice
- **Developer**: HalloWelt
- **License**: GPL-3.0-only
- **Type**: BlueSpice
- **Category**: Communication
- **Edition**: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

**SocialTimelineUpdate** provides a button that inform a user when new timeline posts have been created since the last page view. The timeline can then be reloaded. The button is automatically added to each timeline menu. A number indicates the number of contributions that have been added since the last call. For performance reasons, no more than 10 new posts will be queried. If there are more changes, it is indicated as "9+".

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

**Requirements**

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
Overview

**Description:** Topic and discussion entities for BlueSpiceSocial

**State:** stable  **Dependency:** BlueSpice

**Developer:** HalloWelt  **License:** GPL-3.0-only

**Type:** BlueSpice  **Category:** Communication

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

**SocialTopics** provides the SocialEntity types *discussion* and *topic*. At the bottom of each content page, the social entities associated with the page are displayed, filtered by the *topic* type.

The discussion page is completely replaced by the page view of the SocialEntity type *discussion*. It displays a timeline that lists the social entities of type *topic* that belong to this discussion. In addition, free text can be entered at the beginning of the discussion page just like on a standard MediaWiki discussion page.

Extension: BlueSpiceSocialWatch

Overview

- **Watch-functionality for BlueSpiceSocial-entities**
- **State:** stable
- **Dependency:** BlueSpice
- **Developer:** HalloWelt
- **License:** GPL-3.0-only
- **Type:** BlueSpice
- **Category:** Communication
- **Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

SocialWatch provides the monitoring system for SocialEntities. Template:Box Note This extension is designed to restrict notifications about social entities. So users do not get notifications for all changes to SocialEntities, but only for the SocialEntities they have on their watchlist. When a user creates or comments on a SocialEntity post, that post is automatically added to the user's watchlist. The watch button is automatically attached to all social entities. Not all social entities can be watched.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Overview
Type: BlueSpice  
Category: Communication
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

SocialWikiPage provides the SocialEntity types wikipage and stash. Template:Box Note
- At the end of each content page, a list of the attachments to the current page is displayed
- A social entity of type wikipage is automatically created in the system for each content page.
- The page Special:Attachments allows you to create an attachment without going directly to the associated wiki page.

Extension: BlueSpiceTagCloud

Overview

Description: Displays various tag clouds
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL-3.0-only
Type: BlueSpice  Category: Rich Articles
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

Features

**TagCloud** displays a tag cloud based on categories or search terms. It is used for visualizing the most popular search terms or pages.

A tag is provided to embed the configurable TagCloud in a content page. The tag `<bs:tagcloud />` can be inserted as Wikitext or using the **Insert > Magic word** menu in **VisualEditor**.

Extension: BlueSpiceUEModuleBookPDF

**Overview**

*Description:* Enables BlueSpice export hierarchical collections of articles to Adobe® Portable Document Format (PDF).

*State:* stable

*Dependency:* BlueSpice

*Developer:* HalloWelt

*License:* GPL-3.0-only

*Type:* BlueSpice

*Category:* Book

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

**UEModuleBookPDF** export books to PDF format.

- Creates a PDF book based on the data from the Universal Export.
- Underlying is an HTML / PHP template, which is also customizable by the user.
- Metadata is embedded in the PDF.
- Numbering of chapters and the table of contents is generated.
- Files are attached.
- The pages of the PDF Book are printed on the model of the PDF single pages.
- When exporting a title page and a table of contents should be generated.
  - The cover sheet contains company logo and date of creation and is freely designable.
  - The table of contents is generated automatically, is clickable and allows the direct jump to the desired position within the document.
- In addition, a summary of the changes under the term "last changes" will appear. It contains the relevant changes (ie not minor changes in the system) of the articles within the last two years. If required, the date (format: dd.mm.yyyy, sort order descending), article name and change note of the released statuses should appear.
- References to uploaded documents are included in the PDF book as an attachment ("merge" in the sense of readable articles and non-attachment). Footnotes from wiki articles should be placed at the end of the PDF page and should not appear at the end of the article.
- Breakthroughs of text, tables and images are intelligent to implement (not a single line of a new paragraph as the last line of a page, on the following page continuous tables get the table header again, images are only on one page to represent).
- As the chapter numbering is shown in the header, a page break is required when changing to another chapter.
• Hyperlinks are clickable and refer to the desired position within the document (also applies to attachments), external links are included in the pdf as a hyperlink.

Some aspects of this extension can be configured on Special:BlueSpiceConfigManager, under section "Universal export PDF module". Here wiki administrators can configure:
• How Table of content should be shown.

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Overview: BlueSpiceUEModuleDOCX

Description: This extension outputs a wiki page to Office Open XML.

State: stable  
Dependency: BlueSpice

Developer:HalloWelt  
License: GPL v3 only

Type: BlueSpice  
Category: Export

Edition: BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit Mediawiki.

Features

UEModuleDOCX exports pages and books to the docx-format. This extension requires an external license.

This extension allows the output of a wiki page or book to Office Open XML. The content is inserted in a user-defined, freely selectable template. The conversion is done via an external tool, which requires a license.

Conditions:

- If possible, the conversion should be based on HTML template.
- CSS / inline-styles should be supported. Here is the floating in pictures a bit critical.
- Running headers and footers are necessary.
- Images are embedded.
- Attachments are not possible.
- The template is a docx-file. The generated content from the wiki is inserted into the template at the place where the variable $WIKICONTENT$ is located.
- Meta information is stored in the docx-document (author, generator, etc).

Overview: BlueSpiceUEModuleHTML

Description: Enables export to HTML

State: stable  
Dependency: BlueSpice

Developer:HalloWelt  
License: GPL-3.0-only

Type: BlueSpice  
Category: Export

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

UEModuleHTML export an article to HTML format.

This module allows the UniversalExport to output wiki articles as HTML.
Some aspects of this extension can be configured on [Special:BlueSpiceConfigManager], under section “Universal export HTML Module”. Here wiki administrators can configure:

- Whether to Hide namespace prefix in HTML
- Path to templates directory

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
- BlueSpiceUniversalExport: 4.0

- **Developer:** HalloWelt
- **License:** GPL-3.0-only
- **Type:** BlueSpice
- **Category:** Export
  - BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

**BlueSpiceUEModulePDF** enables the output of a wiki page as Adobe Portable Document Format (PDF).

The user chooses an export function in the widget bar:

- Single page
- Single page with linked pages
- Single page with subpages

Administrators can change the following setting in the Configuration manager, under Function>Export or Extension>BlueSpiceUEModulePDF. Here wiki administrators can configure:

- *Hide namespace prefix in PDF*: The namespace is not shown for page titles in the PDF.

The wiki page can be printed to PDF in landscape format by adding the following tag anywhere in source view:

```xml
<bs:ueparams template="BlueSpice_Landscape" />
```

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

### Requirements

Extension: BlueSpiceUniversalExport

**Overview**

- **Description:** Enables MediaWiki to export pages into different formats
- **State:** stable
- **Dependency:** BlueSpice
- **Developer:** HalloWelt
- **License:** GPL-3.0-only
- **Type:** BlueSpice
- **Category:** Export
- **Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

[View help page]

**Features**

**BlueSpiceUniversalExport** enables the export of wiki page content to various formats. It incorporates various modules, each serving as exporter for a particular format or type of export.

The export is executed taking into account the export settings (parameters, tags). It checks permissions and collects the parameters and metadata of the entities to be exported, providing the context for the export module.

It supports the following export modules:

- **UEModuleBookPDF**
- **UEModuleHTML**
- **UEModulePDF**
- **UEModulePDFRecursive**
- **UEModulePDFSubpages**
- **UEModuleTable2Excel**
Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Administration
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

BlueSpiceVisualEditorConnector enables the connection of BlueSpice to the VisualEditor of the wikimedia foundation.
Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0
- OOJSPlus: * VisualEditor: *

Integrates into

- BlueSpiceSaferEdit
- BlueSpiceVisualEditorConnector
  - VisualEditor

### Extension: BlueSpiceWatchList

#### Overview

**Description:** Adds a watchlist widget and tag  
**State:** stable  
**Developer:** HalloWelt  
**Type:** BlueSpice  
**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

#### Features

**WatchList** improves on standard MediaWiki watchlist functionality and adapts it to the BlueSpice environment.

The watchlist can be viewed in:

- **UserSidebar** (keyword WATCHLIST) shows entries from a user's own watchlist.

• Page content (tag-based, added by user). Example: `<bs:watchlist count="10" maxtitlelength="50"/>`
• Discussion pages are implicitly watched by MW. These implicit entries do not appear in the list. But a discussion page can be added explicitly.
• Long titles are truncated.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

Extension:\: BlueSpiceWebDAVClientIntegration

**Overview**

*Description:* Allows opening files from the browser directly in the client application (Requires WebDAV)

*State:* stable

*Dependency:* BlueSpice

*Developer:*HalloWelt

*License:* GPL-3.0-only

*Type:* BlueSpice

*Category:* Document Management

*Edition:* BlueSpice pro (deactivated), BlueSpice Farm (deactivated), BlueSpice Cloud (deactivated)

**Features**

BlueSpiceWebDAVClientIntegration provides an user user interface for the WebDAV on wiki. It integrates into BlueSpiceContextMenu to add a menu option for opening files in a client application.

**Technical Information**

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 3.3

### Integrates into

### Special pages

Extension\: BlueSpiceWebDAVMminorSave

Overview
- Description: bs-webdavminorsave-desc
- State: stable
- Dependency: BlueSpice
- Developer: HalloWelt
- License: GPL-3.0-only
- Type: BlueSpice
- Category: Document Management
- Edition: BlueSpice pro (deactivated), BlueSpice Farm (deactivated), BlueSpice Cloud (deactivated)

Features
- BlueSpiceWebDAVMminorSave provides a mid-layer physical storage between a client application and the wiki.

The file is read from the wiki once it is opened and saved back via WebDAV to the wiki when its closed, while all intermediate saves are saved in a temporary location to avoid unnecessary file versions on the wiki.

Technical Information
- This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.
Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 3.3

Integrates Into

- WebDAVLocksUnlock

Extension: BlueSpiceWhoIsOnline

Overview

Description: Displays a list of users who are currently online
State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL-3.0-only
Type: BlueSpice
Category: Rich Articles
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

With the extension WhoIsOnline you can see which users have been logged-in in the last 10 minutes.

- displays a list of logged-in users
- displays the number of logged-in users
- tags can be integrated on content pages
  - `<bs:whoisonline:popup anchortext='new label' />` shows currently logged-in users in a popup when hovering over a link
  - `<bs:whoisonline:count />` or `<userscount />` shows the number of logged-in users

Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.
### Requirements

- MediaWiki: 1.35.0
- BlueSpiceFoundation: 4.0

Extension\: BlueSpiceWikiExplorer

### Overview

**Description:** Sort articles by criteria  
**State:** stable  
**Dependency:** BlueSpice  
**Developer:** HalloWelt  
**License:** GPL-3.0-only  
**Type:** BlueSpice  
**Category:** Quality Assurance  
**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

### Features

WikiExplorer provides a special page with a list of all wiki pages which can be filtered and sorted.

- Multiple sorting and filtering possibilities.
- Supports wiki maintenance

WikiExplorer is implemented with ExtJS, to maintain compatibility.

### Technical Information

This information applies to BlueSpice 3. Technical details for BlueSpice cloud can differ in some cases.

</tr>
<tr>
<td>Category</td>
<td>Administration</td>
</tr>
<tr>
<td>Edition</td>
<td>BlueSpice Farm</td>
</tr>
</tbody>
</table>

Features

BlueSpiceWikiFarm offers intuitive user interface for creating and managing separate wiki instances directly from the wiki. All wiki instances are completely independent from one another.

Usage

Every WikiFarm has a root wiki and instance wikis. There is only one root wiki and it serves a management wiki for the instances.

Extension: Bootstrap

Overview
Description: Provides the Bootstrap framework in the wiki
State: stable
Dependency: MediaWiki
Developer: Stephan Gambke
License: GPL v3+
Type: MediaWiki
Category: Infrastructure
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The Bootstrap extension provides the Twitter Bootstrap (version 3) web front-end framework to MediaWiki. It can be activated directly or used from skins or extensions.

Template:MWlink

Extension: CategoryTree

Overview
Description: Enables you to displays categories and subcategories in a tree structure.
State: stable
Dependency: MediaWiki
Developer: Daniel Kinzler
License: GPL v3 only
Type: MediaWiki
Category: Content Structuring
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

CategoryTree enables you to displays categories and subcategories in a tree structure.

Skin: Chameleon

Overview
Description: Provides a flexible responsive skin using Bootstrap 4
State: stable
Dependency: MediaWiki
Developer: Stephan Gambke
License: GPL v3+
Type: MediaWiki
Category: Skinning
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

You’ve got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com

154
Overview
For more info, visit Mediawiki.

Features

Chameleon is a highly customizable responsive MediaWiki skin that uses Bootstrap 4.
It currently provides five different layouts to choose from. Each layout is defined in an XML file and as such easily adaptable to your needs.

Extension\: Cite

Overview
Description: Allows a user to create footnotes by using a special tag.
State: stable
Developer: Ævar Arnfjörð Bjarmason
License: GPL v2+
Type: MediaWiki
Category: Rich Articles
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

The Cite extension allows a user to create references as footnotes on a page.

Extension\: CiteThisPage

Overview
Description: Extension provides a special page which allows creating a citation for a page in variety of styles.
State: stable
Developer: Ævar Arnfjörð Bjarmason, James D. Forrester
License: GPL v2+
Type: MediaWiki
Category: Infrastructure
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

CiteThisPage extension creates a special page Special:CiteThisPage. It allows creating a citation for a page in variety of styles.
For every page, in more menu, there is a link to "Cite this page". It leads to the SpecialPage providing all the available styles for the citation.

Extension\: CodeEditor
### Overview

**Description:** Syntax-highlighted editing for JavaScript and CSS pages using Ace editor  

**State:** stable  

**Developer:** Brion Vibber, Derk-Jan Hartmann, and others  

**Type:** MediaWiki  

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud  

**License:** GPL v2+ and BSD 3 Clause  

**Category:** Editor

---

### Features

The **CodeEditor** extension extends the WikiEditor advanced editing toolbar with an embedded Ace editor widget, providing some handy features for user/site JS, CSS pages, and — when Extension:Scribunto is also installed — for pages in the *Module* namespace:

- syntax highlighting for JavaScript, CSS and Lua  
- auto-indent  
- tab key produces tab indents (since 1.22), soft indents before.  
- indent/unindent selection with tab/shift-tab  
- syntax validity check for JavaScript  
- Pair-matching for parenthesis, braces and square brackets

While this extension is licensed GNU General Public License v2.0 or later (GPL-2.0+) it makes use of the Ace editor software which is licensed BSD 3-clause "New" or "Revised" License (BSD-3-Clause).

---

### Extension: CognitiveProcessDesigner

**Overview**

**Description:** Draw BPMN processes with a graphical user interface in Semantic MediaWiki  

**State:** stable  

**Developer:** Tobias Weller, Maria Maleshkova, Alexander Pinchuk  

**Type:** MediaWiki  

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud  

**License:** Apache license 2.0  

**Category:** Rich Articles

---

### Features

The **Cognitive Process Designer** extension supports the creation, importing, exporting and annotating of BPMN (Business Process Model and Notation) processes by using an intuitive GUI (graphical user interface). Each element (node and edge) is represented by its own wiki page, which publishes the information according to the Linked Data Principles. Cognitive Process is based on bpmn.io, an open source project by Camunda. Bpmn.io is an JavaScript renderer that allows to model BPMN processes and checks the syntax. Semantic Forms is used to facilitate the input of information for each element.
Extension: ConfirmAccount

**Overview**
Requires submission and approval of accounts.

**Description:** Requires submission and approval of accounts.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Aaron Schulz  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Administration

**Edition:** BlueSpice Cloud

For more info, visit [MediaWiki](https://www.mediawiki.org).

**Features**
The ConfirmAccount extension disables direct account creation and requires the approval of new accounts by a bureaucrat.

Direct account creation can still be enabled (if you want Administrators/Bureaucrats to be able to directly make them) by configuring User rights.

Extension: ConfirmEdit

**Overview**
Enables the user to place various CAPTCHA methods to protect the wiki from spambots.

**Description:** Enables the user to place various CAPTCHA methods to protect the wiki from spambots.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Brian Vibber and other  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Security

**Edition:** BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit [MediaWiki](https://www.mediawiki.org).

**Features**
The ConfirmEdit extension enables the user of placing various CAPTCHA methods on the page to prevent spambots from editing the page.

Extension: ContentTransfer

**Overview**
Copies new or existing wiki pages into a different wiki. (v3.2 and up)

**Description:** Copies new or existing wiki pages into a different wiki. (v3.2 and up)

**State:** stable  
**Dependency:** BlueSpice

**Developer:**HalloWelt  
**License:** GPL v3

**Type:** BlueSpice  
**Category:** Quality Assurance

**Edition:** BlueSpice Farm (deactivated)
Features

Users with the appropriate authorization can copy up to 200 pages per transfer from a wiki to the same namespace of a target wiki. This extension usually requires BlueSpice Farm.

Depending on the settings selected on the ContentTransfer special page, the following files are copied:

- the selected wiki pages
- the related category pages
- the book page associated with wiki pages
- the templates associated with wiki pages
- attached files

Technical information

**Important!** The extension is deactivated by default and must first be activated in 060-ContentTransfer under settings.d - or in the LocalSettings.custom.php in the installation folder (not just in a single farm instance):

```php
wfLoadExtension ('ContentTransfer');
```

Configuration

The following information is necessary to transfer content between two wiki instances:

**<source-instance-name>**

Name of the source wiki. This is the directory name from `/opt/mediawiki/w/_sf_instances/`.

**<target-instance-descriptive-name>**

Descriptive name of the target wiki. This is usually the same as `<target-instance-name>`, but can be chosen freely to better describe the instance. Does not allow spaces.

**<target-instance-name>**

Name of the target wiki. This is the directory name from `/opt/mediawiki/w/_sf_instances/`. It can be extracted from the url of the wiki instance.

**<target-instance-label>**

The display name for the target wiki. It can contain empty spaces. This information is optional and can be commented out.

**<servername>**

Server-url

**<bot-username-provided>**
A user name in the form of `<username>@<id>`.

The bot user has to be generated from Special:BotPasswords in the target wiki. After you click “Create”, a page for selecting the bot rights is shown. Activate the following settings:

- High-volume editing
- Edit existing pages
- Edit protected pages
- Create, edit and move pages,
- Upload new files
- Upload, replace and move files

The password is created in the wiki and needs to be used in the settings below.

With all this info, open `/opt/mediawiki/w/_sf_instances/<source-instance-name>/LocalSettings.custom.php`.

Add the following info:

```php
$wgContentTransferTargets['<target-instance-descriptive-name>'] = [
    "url" => "https://<servername>/<target-instance-name>/api.php",
    "user" => "<bot-username-provided>",
    "password" => "<bot-password-provided>",
    "draftNamespace" => "Draft",
    "pushToDraft" => true,
    "displayText" => "<target-instance-label>",
];
```

If ContentTransfer is used without the extension MergeArticles, the information about drafts has to be deactivated in the settings block:

```php
# "draftNamespace" => "Draft",
"pushToDraft" => false,
```

Example:

```php
$wgContentTransferTargets['MeinWiki'] = [
    "url" => "http://172.16.200.23/MeinWikiName/api.php",
    "user" => "Snow@Schneewittchen",
    "password" => "uuicqdV9mubFrepbplvsl5957cpa9",
    # "draftNamespace" => "Draft",
    "pushToDraft" => false,
    "displayText" => "Mein Wiki",
];
```

**Note:** To conclude the configuration, you need to run update.php
Additional settings:

```
$wgContentTransferIgnoreInsecureSSL = false; // Ignore invalid SSL certificates (for test systems)
$wgContentTransferPageLimit = 200; // Max number of pages to be allowed at one
$wgContentTransferOnlyContentNamespaces = true; // Only allow content namespaces to be selected in filters
$wgContentTransferAllowTalkNamespaces = false; // Allow talk namespaces to be selected in filters
```

Anforderungen

ContentTransfer requires BlueSpiceFoundation. Pages that already exist in the target wiki, can be merged using the extension MergeArticles.

Extension\: CreateUserPage

Overview

Description: Create user page for a user if it does not exist when the user logs in
State: stable
Developer: Cindy Cicalese
License: MIT
Type: MediaWiki
Category: Administration
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki;

Features

The Create User Page extension checks whether the user has a user page and, if not, creates it with the content as specified in $wgCreateUserPage_PageContent. The check is done when the user logs in if $wgCreateUserPage_OnLogin is set to true (the default), otherwise the check is done on every page load.
The user account to be used for user page creation can be set with $wgCreateUserPage_AutoCreateUser which is by default the user itself for whom the page is being created.

Extension\: Data Transfer

Overview

Description: Allows for importing and exporting the contents of a wiki's pages in XML and CSV form, using template calls to define the fields.
State: stable
Developer: Yaron Koren
License: GPL v2+
Type: MediaWiki
Category: Export
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki;
Features

Please note that data transfer is not an ideal solution for securing your wiki or transferring wiki pages from one MediaWiki site to another. The pages "Special: Export" and "Special: Import" integrated in MediaWiki should be used for this purpose.

Extension: DrawioEditor

Overview

Description: Integration of diagrams
State: beta
Developer: Markus Gebert
[Manual:Extension/DrawioEditor]
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

The extension DrawioEditor integrates the draw.io flow chart editor and allows inline editing of charts.

Extension: DynamicPageList3

Overview

Description: Create lists of other articles based on their category, namespace, title, references or template usage and include contents or arguments of template calls of those articles into your page.
State: stable
Developer: Alexia E. Smith, Algorithmix, Dangerville, IlyaHaykinson, Theaitetos, Unendlich
Type: MediaWiki
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

DynamicPageList3 extension is a reporting tool for MediaWiki, which allows to include lists of pages, based on various selection criteria, on any content page.

Note: In MediaWiki 1.35 (BlueSpice Cloud), this extension can cause a database error.
https://phabricator.miraheze.org/T6402
Usage / functionality

A typical application is the inclusion of a list of pages from certain categories or namespaces on a wiki page. The selection and sorting criteria can be applied using various parameters.

Technical info

The standard module for this extension is `{{#dpl: ... }}`.

Configuration

- There are no configuration options for this extension.

More Info

Examples for how to use this extension are included on the related help page.

A complete user manual can be found on Gamepedia.

Extension: Echo

Overview

Description: Provides an in-wiki notification system that can be used by other extensions.

State: stable

Developer: Andrew Garrett, Ryan Kaldari, Benny Situ

Type: MediaWiki

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

Features

The Echo extension provides an in-wiki notification system that can be used by other extensions. Thanks and Flow are two MediaWiki extensions that make use of Echo.

For info about notifications in BlueSpice, visit the notifications help page.

Extension: EmbedVideo

Overview

Description: Adds a parser function called #ev for embedding video clips from popular video sharing services.

State: stable

Developer: Alexia E. Smith, Andrew Whitworth, Jim R. Wilson, Mohammad Derakhshani

Type: MediaWiki

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Dependency: MediaWiki

License: MIT

Category: Rich Articles
Features

**EmbedVideo** extension adds a parser function called `#ev` for embedding video clips from over 24 popular video sharing services in multiple languages and countries. It also adds video and audio media handlers to support transforming standard `[[File:Example.mp4]]` file links into embedded HTML5 `<video>` and `<audio>` tags.

Extension: EventBus

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Propagation of change events to a RESTful service.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>stable</td>
</tr>
<tr>
<td>Dependency</td>
<td>MediaWiki</td>
</tr>
<tr>
<td>Developer</td>
<td>EEvans (WMF)</td>

<tr>
<td>Type</td>
<td>MediaWiki</td>
</tr>
<tr>
<td>Category</td>
<td>Administration</td>
</tr>
<tr>
<td>Edition</td>
<td>BlueSpice pro, BlueSpice Farm, BlueSpice Cloud</td>
</tr>
</tbody>
</table>

Features

The EventBus extension propagates state changes (edit, move, delete, revision visibility, etc) to a RESTful event service, providing consumers of the service with the means of tracking changes to MediaWiki content.

Extension: ExtJSBase

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Adds the GPL version of Sencha Inc. ExtJS Rich Internet Application Framework</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

You’ve got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Overview
Developer: Yaron Koren, and others
License: GPL v2+
Type: MediaWiki
Edition: BlueSpice pro
For more info, visit Mediawiki.

Features

ExternalData extension allows MediaWiki pages to retrieve, filter, and format structured data from one or more sources. These sources can include external URLs, regular wiki pages, uploaded files, files on the local server, databases or LDAP directories.

Parser functions

The extension has nine parser functions:

- **#get_web_data** retrieves CSV, GFF, JSON or XML data from a URL and assigns it to variables that can be accessed on the page.
- **#get_soap_data** retrieves data from a URL via the SOAP protocol.
- **#get_file_data** retrieves data from a file on the local server, in the same formats as #get_web_data.
- **#get_db_data** retrieves data from a database.
- **#get_ldap_data** retrieves data from an LDAP server.
- **#external_value** displays the value of any such variable.
- **#for_external_table** cycles through all the values retrieved for a set of variables, displaying the same "container" text for each one.
- **#store_external_table** cycles through a table of values, storing them as semantic data via the Semantic MediaWiki extension, by mimicking a call to SMW's #subobject function for each row.
- **#display_external_table** cycles through all the values retrieved for a set of variables, displaying each "row" using a template.
- **#clear_external_data** erases the current set of retrieved data.

Extension\: FilterSpecialPages

Overview
Description: Inserts a field in Special:Specialpages to provide a search function.
State: stable
Dependency: BlueSpice
Developer:HalloWelt
License: GPL v2+
Type: BlueSpice
Category: Search and Navigation
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

Quick access and less searching for special pages: The extension offers a search field at the special page "Specialpages". While typing a search string (e.g. "pages") only special pages with this search string in the title will be shown.
Overview

FlaggedRevs is a MediaWiki extension that activates an approval mechanism.

New versions of an article are initially marked as drafts and remain so until a user with revision rights checks and approves the page.

The MediaWiki extension is customized in BlueSpice. It uses the FlaggedRevsConnector to work alongside the work flow tool ReviewExtended, realising the complete functionality of an editorial process with a final approval step.

Features

FlexiSkin allows you to customize the skin of your wiki. Choose between different colors or fonts and insert your own logo.

Usage / Features

- dedicated special page Special:Flexiskin
- allows setting of various out of the box themes
- allows definition of custom themes
**Extension**: Forms

**Overview**
- Description: All-purpose form framework for MediaWiki
- State: stable
- Dependency: MediaWiki
- Developer: Hallo Welt!
- License: GPL v3 only
- Type: MediaWiki
- Category: Rich Articles
- Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

**Important!** The extension is included in the current release candidate BlueSpice 4.1. However, the corresponding authorizations are not yet registered in a required user role.

This extension allows the formatting of a wiki page or a dialog window as a form. Besides being useful for creating form instances as wiki pages, this extension is also used in conjunction with the Workflows extension.

To use the extension in the Release Candidate 4.1, you have to define the user roles in LocalSettings.php:

```php
$bsgPermissionConfig['forms-create-form'] = [ 'type' => 'global', "roles" => [ 'editor' ] ];
$bsgPermissionConfig['forms-edit-form-definition'] = [ 'type' => 'global', "roles" => [ 'admin' ] ];
```

**Extension**: Gadgets

**Overview**
- Provides a way for users to pick JavaScript or CSS based "gadgets" that other wiki users provide.
- State: stable
- Dependency: MediaWiki
- Developer: Stephanie Amanda Stevens
- License: GPL v2+
- Type: MediaWiki
- Category: Infrastructure
- Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**For more info, visit** [Mediawiki](https://www.mediawiki.org/).

**Features**

The **Gadgets** extension provides a way for users to pick JavaScript-based or CSS-based "gadgets" that other wiki users provide.

Gadgets are made up of JavaScript and/or CSS snippets located on pages in the MediaWiki namespace. Each gadget is defined by a line in the page `MediaWiki:Gadgets-definition`, providing a name and description for the gadget, and a list of the JS and CSS snippets that it uses.
Since Gadgets reside in the MediaWiki namespace (the list defining the gadgets as well as the actual code snippets), only users with sysop rights (wiki admins) can edit the code.

Extension: Header Tabs

Overview
Description: displays top-level headers as JavaScript-based tabs.
State: stable
Developer: Sergey Chernyshev, Yaron Koren
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features
Header Tabs displays top-level headers as JavaScript-based tabs.

Extension: HitCounters

Overview
Description: Counts the hits of a page/article.
State: stable
Developer: Mark A. Hershberger
Type: MediaWiki
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features
HitCounters extension provides the page views functionality that was removed in MediaWiki 1.25.

Before MediaWiki 1.25, the page views counting functionality was in core MediaWiki. This extension is based on that same code, but was deliberately done in a more lightweight way in order to speed up processing time. Many lines of superfluous code were removed. Also, the old MediaWiki core code did numerous database queries on every page hit; these have all been removed as well. This change may possibly lead to some inaccuracies in the data.

The core differences that wiki administrators need to know are:

- The hit counts are stored in cache.
- The visible hit count at the bottom of each page is updated only once per day. (Pages with hit count less than 100 are updated once per minute.)
- If you refresh your browser on a wiki page, that hit is ignored.
Extension: ImageMap

**Overview**
Description: Allows clickable HTML image maps.
State: stable  
Developer: Tim Starling  
License: GPL v2+  
Type: MediaWiki  
Category: Search and Navigation  
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://mediawiki.org/wiki/).  

**Features**

ImageMap allows you to link specific parts of an image in your wiki to internal or external pages.

Extension: ImageMapEdit

**Overview**
Description: automates and simplifies a large part of the process.
State: stable  
Developer: Mark Reymann, Peter Schlömer, Tobias Weichart  
License: GPL v2+  
Type: MediaWiki  
Category: Editor  
Edition: BlueSpice pro, BlueSpice free, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://mediawiki.org/wiki/).

**Features**

Putting an ImageMaps on a wiki can be tricky and takes some work. ImageMapEdit automates and simplifies a large part of the process.

Extension: InputBox

**Overview**
Description: Allows to integrate HTML forms into wiki pages.
State: stable  
Developer: Erik Möller, Leonardo Pimenta, Rob Church, Trevor Parscal, Daniel Schuba  
License: MIT  
Type: MediaWiki  
Category: Content Structuring  
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://mediawiki.org/wiki/).
Features

InputBox allows to integrate HTML forms into wiki pages.

Extension: Interwiki

Overview
Description: Provides a special page for maintaining the Interwiki table.
State: stable
Developer: Stephanie Amanda Stevens, SPQRobin
Type: MediaWiki
Edition: BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)
For more info, visit Mediawiki.

Features

The Interwiki extension adds the "Special:Interwiki" page to MediaWiki, to view and edit the interwiki table, and a log of any actions made with it.

This extension modifies the database directly, so you should back up your database before using it.

Since Interwiki version 2.1, it works with the $wgInterwikiCache, and the CSS uses Resource Loader.

This extension allows the InterWiki list in the database to be maintained from a list of entries in a file instead of running an update script or using a special page. This has the advantage of allowing a number of wikis installed on the same server to share the same interwiki list simplifying maintenance.

The default file from which the InterWiki entries are taken is a file called InterWiki.txt which resides in the same directory as the extension script. A different file can be specified by setting the $wgInterWikiFile global, but only the filename should be specified, and it must still reside in the same directory as the extension script.

Another global is $wgInterWikiAddOnly which is set to true by default and specifies that entries which are present in the file should update existing items in the database or insert new ones, but current items which are not present in the file should not be deleted from the database. If $wgInterWikiAddOnly is set to false, the database will be made to exactly match the items in the file and contain no other items.

Extension: InviteSignup
Features

InviteSignup allows wiki owners to invite users to a restricted wiki.

- adds the page Special:InviteSignup to the wiki
- users with invitesignup permission can send email invitations
- invited users can create their own account
- inviter has option to set up additional user groups to which the invitees will be added after account creation

User manual

For detailed description and usage, visit our help page.

Rights (permissions)

- invitesignup: enables wiki users to send invitations

Extension\: LDAP Authorization

Features

LDAP Authorization checks for certain authorization requirements when logging into a wiki by using Extension: PluggableAuth or Extension:Auth remoteuser. If one of the requirements is not satisfied, the login process will be cancelled.
Extension\#: LDAPAuthentication2

**Overview**

**Description:** Allows authentication against an LDAP resource

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Cindy Cicalese, Mark A. Hershberger, Robert Vogel  
**License:** -

**Type:** MediaWiki  
**Category:** Infrastructure

**Edition:** BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit MediaWiki.

**Features**

Provides LDAP authentication and some authorization functionality for MediaWiki.

Extension\#: LDAPGroups

**Overview**

**Description:** Allows user group synchronization with a LDAP resource

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Mark A. Hershberger, Cindy Cicalese  
**License:** -

**Type:** MediaWiki  
**Category:** Infrastructure

**Edition:** BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit MediaWiki.

**Features**

The LDAPGroups extension allow users to manage the membership of their MediaWiki groups using a directory server via LDAP such as Microsoft's ActiveDirectory.

Extension\#: LDAPProvider

**Overview**

**Description:** Provides a common infrastructure to connect to a LDAP resource and run queries against it

**State:** stable  
**Dependency:** MediaWiki

**Developer:** MediaWiki  
**License:** -

**Type:** MediaWiki  
**Category:** Infrastructure

**Edition:** BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit MediaWiki.
Features

LDAPProvider provides classes and configuration to query data from LDAP resources.

Extension: LDAPSyncAll

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Mechanism which synchronizes users in the database and users in Active Directory. (v3.2 and up)</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>stable</td>
</tr>
<tr>
<td>Dependency</td>
<td>MediaWiki</td>
</tr>
<tr>
<td>Developer</td>
<td>Robert Vogel</td>
</tr>
<tr>
<td>License</td>
<td>-</td>
</tr>
<tr>
<td>Category</td>
<td>Infrastructure</td>
</tr>
</tbody>
</table>

Edition: BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit: MediaWiki.

Features

This extension provides a mechanism which synchronizes users in the database and users in Active Directory:

- If a user is not in the database, but is in LDAP => the user will be added to the database
- If a user is in the database, but is not in LDAP => the user will be disabled in the database

Extension: LDAPUserInfo

Overview

<table>
<thead>
<tr>
<th>Description</th>
<th>Ermöglicht die Synchronisation von Benutzerinformation und Einstellungen mit einer LDAP Ressource.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>stable</td>
</tr>
<tr>
<td>Dependency</td>
<td>MediaWiki</td>
</tr>
<tr>
<td>License</td>
<td>GPL v2+</td>
</tr>
<tr>
<td>Category</td>
<td>Infrastructure</td>
</tr>
</tbody>
</table>

Edition: BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit: MediaWiki.

Features

Die Erweiterung LDAPUserInfo aktualisiert die Benutzerinformation im lokalen Wiki mit den Daten aus der LDAP Ressource.

Für weitere Informationen besuchen Sie bitte MediaWiki.
**Lingo** is a glossary extension. It lets you define a list of abbreviations and their definitions on a page and then displays these definitions whenever an abbreviation is hovered over in an article.

Extension: Lingo

**Overview**

**Description:** Provides hover-over tool tips on pages from words defined on the Glossar page

**State:** stable

**Developer:** Barry Coughlan, Stephan Gambke

**License:** GPL v2+

**Type:** MediaWiki

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://www.mediawiki.org).

**Features**

**Lingo** is a glossary extension. It lets you define a list of abbreviations and their definitions on a page and then displays these definitions whenever an abbreviation is hovered over in an article.

Extension: LocalisationUpdate

**Overview**

**Description:** Allows to update the localizations for MediaWiki messages at any time, without needing to upgrade the MediaWiki software.

**State:** stable

**Developer:** Tom Maaswinkel, Niklas Laxström

**License:** GPL v2+

**Type:** MediaWiki

**Edition:** BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit [Mediawiki](https://www.mediawiki.org).

**Features**

**LocalisationUpdate** keeps the localized messages as up-to-date as possible.

This MediaWiki extension fetches updates to MediaWiki core and extension localization files and makes them available to an installation without updating its own source. This allows us to pull updated translations being committed to development trunk even though our live install is running a deployment branch.

Whenever you want to run an update, run `php extensions/LocalisationUpdate/update.php` on the command line, or set up a cron job.

LocalisationUpdate does not update translations automatically.

If you are on a unix-like system, you should add LocalisationUpdate to crontab:

```bash
You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
```
You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com

```
crontab -e
# Add the following line
@daily php /path/to/your/wiki/extensions/LocalisationUpdate/update.php --quiet
```

If localization updates don't seem to come through, you may need to run `php maintenance/rebuildLocalisationCache.php --force`.

---

### Extension: LoginNotify

**Overview**

**Description:** Notifies users about unusual login events.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Brian Wolff  
**License:** MIT

**Type:** MediaWiki  
**Category:** Administration

**Edition:** BlueSpice Cloud  
**For more info, visit** [Mediawiki](https://www.mediawiki.org/).

**Features**

The **LoginNotify** extension notifies users in some instances when someone logs into their account.

**Usage / Features**

The extension notifies users when someone logs into their account from an unknown device or from an unknown IP address. Unsuccessful login attempts via known devices can also trigger a notification.

**Technical information**

**Configuration**

The extension can be configured so that warnings are issued after a certain number of failed login attempts (the number is configurable and can differ between unknown IPs / devices and known IPs / devices). There can also be echo notifications (which can also be sent via email) for successful logins from IPs that a user does not normally use.

---

### Extension: Loops
Overview
Description: Provides parser functions for performing loops.
State: stable	Dependency: MediaWiki
Developer: David M. Sledge, Daniel Werner	License: -
Type: MediaWiki	Category: Infrastructure
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

Features
The extension provides the following loop parser functions:

- #while
- #dowhile
- #loop
- #forargs (experimental)
- #fornumargs (experimental)

Some of the parser functions provided by this extension require the ParserFunctions as well as the Variables extension to be installed first. Both extensions are bundled with all BlueSpice editions.

You can find more info at mediawiki.org.

Extension: Maps

Overview
Description: allows users to display maps and coordinate data using multiple mapping services.
State: stable	Dependency: MediaWiki
Developer: Jeroen De Dauw, and others	License: GPL v2+
Type: MediaWiki	Category: Rich Articles
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

Features
Maps is a MediaWiki extension to visualize and work with geographical information.

For more information please visit MediaWiki.

Extension: Math

Overview
Description: Renders mathematical formulas between math tags
State: stable	Dependency: MediaWiki
Developer: License: GPL v2+
Type: MediaWiki	Category: Rich Articles
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Overview
For more info, visit Mediawiki.

Features

The Math extension provides support for rendering mathematical formulae.

On Windows systems, the extension LatexRenderer is used instead.

1.3.1 Configuration ........................................................................ 178
1.3.2 Rights (permissions) ................................................................. 178
1.3.3 Requirements ........................................................................ 178
Usage / Features

If a page is moved to another wiki using the ContentTransfer extension, the page is saved in a special namespace in the target wiki. From there, the page can be compared and merged with the last version in the target wiki.

Technical information

Configuration

Rights (permissions)

Requirements

MergeArticles requires BlueSpiceFoundation.

Extension\: MultimediaViewer

Overview

Description: Provides a better experience to users when they click on thumbnails

State: stable

Developer: Mark Holmquist, Gerg Tisza, Gilles Dubuc

Type: MediaWiki

Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

Features

MultimediaViewer extension gives the user of a wiki a different interface for viewing full-size, or nearly full-size, images in their browser without extraneous page loads or confusing interstitial pages.

For more information please visit MediaWiki.

Extension\: NSFileRepo

Overview

Description: implements per_namespace group permissions for image and file rights protection.

State: stable

Developer:HalloWelt

Type: BlueSpice

Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.
Features

NSFileRepo enables uploading files to namespaces. The extension restricts access to upload and read files and images to a given set of user groups associated with the protected namespaces.

Usage / features

Using this extension (within the security limitations noted above), you can protect not only pages and areas of your wiki, but also any uploaded images or files within those namespaces. Use the same syntax as a normal file reference link, adding the namespace between the file specified ("File", "Image" or "Media") and the file name.

Technical information

Configuration

Image Authorization must be configured properly.

Rights (permissions)

This extension does not require any special rights. If users will be allowed to access files in a particular namespace depends on the "read" permission for that namespace.

Requirements

NSFileRepo requires BlueSpiceFoundation.

More info

For detailed description and usage, visit our help page.

Technical details on how this extension works can be found on MediaWiki.

Demo

Try out associating files such as images with namespaces in our BlueSpiceDemo.

Overview

Description: Display of graphics in SVG format
State: stable  Dependency: MediaWiki
Developer: Povlias Kanapickas  License: GPL v2+
Type: MediaWiki  Category: Infrastructure
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.
**Features**

**NativeSvgHandler** extension allows SVG files to be served directly to clients for client-side rendering.

For more information please visit MediaWiki.

Extension: Nuke

**Overview**

**Description:** Extension for administrators to delete more than one page at once.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Brion Vibber, Jeroen De Dauw  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Administration

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

**Features**

**Nuke** is an extension for administrators to delete more than one page at once. This tool allows mass deletions of pages recently added by a given user or an IP address.

For more information visit MediaWiki.

Extension: OATHAuth

**Overview**

**Description:** Provides authentication support using HMAC-based one-time passwords

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Ryan Lane  
**License:** GPL v2+ and GPL v3+

**Type:** MediaWiki  
**Category:** Infrastructure

**Edition:** BlueSpice Cloud, BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

View help page

**Features**

The **OATHAuth** extension is a time-based one-time password [1] (TOTP) implementation. It provides two-factor authentication [2] via something you have (your phone or desktop client) and something you know (your user name/password). Client support is available for most feature phones, smartphones and desktops (see Client implementations [3]).

Template:MWLink.

Extension: OOJSPlus

---

You’ve got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Overview

Description: Provides Widgets and utility functions for OOJS
State: stable  Dependency: BlueSpice
Developer: HalloWelt  License: GPL v3
Type: BlueSpice  Category: -
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features

Extension: OpenID Connect

Overview

Description: Extends the PluggableAuth extension to provide authentication using OpenID Connect.
State: stable  Dependency: MediaWiki
Developer: Cindy Cicalese  License: MIT
Type: MediaWiki  Category: Infrastructure
Edition: BlueSpice Cloud
For more info, visit Mediawiki.

Features

The OpenID Connect extension extends the PluggableAuth extension to provide authentication using OpenID Connect.

Technical information

Requirements

OpenID Connect requires the extensions PlugabbleAuth to be installed first.

For more information about this extension, visit the extension page at mediawiki.org.

Extension: OpenLayers

Overview

Description: basic library for the grafical representation/chart of semantic data.
State: stable  Dependency: MediaWiki
Developer: Paladox, Yaron Koren  License: GPL v2+
Type: MediaWiki  Category: Infrastructure
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki,
## Features

The extension **OpenLayers** makes the OpenLayers module available.

For more information, please visit [MediaWiki](https://www.mediawiki.org).

### Overview

**Page Forms** (known until November 2016 as **Semantic Forms**) is an extension to MediaWiki that allows users to add, edit and query data using forms.

It was originally created as an offshoot of the **Semantic MediaWiki** extension to be able to edit templates that store their parameters via SMW. However, it can now also work with the alternative **Cargo** extension, or with neither extension installed.

Very simply, Page Forms allows you to have forms for creating and editing pages on your wiki, as well as for querying data, all without any programming. Forms can be created and edited not just by administrators, but by users themselves.

The main components of Page Forms functionality are form definition pages, which exist in a separate namespace, 'Form:'. These are pages consisting of markup code which gets parsed when a user goes to a form. Since forms are defined strictly through these definition pages, users can themselves create and modify forms, without the need for any actual programming.

The Page Forms extension is mostly used to add and edit calls to infobox-style templates within pages. A form allows a user to populate a pre-defined set of templates, as well as page sections, for any page; if Cargo or Semantic MediaWiki are used, the data within the templates can then be stored and queried.

Forms can also be used to edit the data in an existing page, and you can enable an “formedit” tab to show up on any page.

Page Forms also supports **autocompletion of fields**, so users can easily see what the previously-entered values were for a given field. This greatly helps to avoid issues of naming ambiguity, spelling, etc.

Data in a page that doesn't fit into the form, like a free-form text description of the page's subject, isn't ignored when the page is edited with a form; rather, it is placed into a separate input box called "free text".
Page Forms also includes a wide variety of other functionality related to forms.

For more information please visit MediaWiki.

Extension: PageCheckout

**Overview**

**Description:** Allows exclusive rights on a page for a user.

**State:** stable  **Dependency:** MediaWiki

**Developer:** Hallo Welt!  **License:** -

**Type:** BlueSpice  **Category:** Security

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

This extension was created to be used in the context of Workflows.

Extension: PageHeader

**Overview**

**Description:** Provides an additional user interface before the page content.

**State:** stable  **Dependency:** BlueSpice

**Developer:** Hallo Welt!  **License:** GPL v3 only

**Type:** BlueSpice  **Category:** Skinning

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Features**

Extension: PagImages

**Overview**

**Description:** Collects information about images used on a page.

**State:** stable  **Dependency:** MediaWiki

**Developer:** Max Semenik  **License:** WTFPL

**Type:** MediaWiki  **Category:** Infrastructure

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

**Features**

The PagImages extension collects information about images used on a page.
Extension\": ParserFunctions

**Overview**
- **Description:** Enhance parser with logical functions
- **State:** stable  
- **Dependency:** BlueSpice
- **Developer:** Tim Starling  
- **License:** GPL v2+
- **Type:** MediaWiki  
- **Category:** Rich Articles
- **Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://www.mediawiki.org).

**Features**

The **ParserFunctions** extension enhances the wikitext parser with helpful functions, mostly related to logic and string-handling. Since MediaWiki 1.15, ParserFunctions has incorporated most (but not all) of the functions from the **StringFunctions** extension, which may be enabled or disabled.

**Template:** MWlink

Extension\": ParserHooks

**Overview**
- **Description:** adds an OOP and declarative parser hook interface.
- **State:** stable  
- **Dependency:** MediaWiki
- **Developer:** Jeroen De Dauw  
- **License:** GPL v2+
- **Type:** MediaWiki  
- **Category:** Infrastructure
- **Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](https://www.mediawiki.org).

**Features**

**ParserHooks** is a PHP library for MediaWiki extensions. It does not in itself add or enhance functionality of your wiki. OOP interface for creating parser hooks in a declarative fashion.

For more information please visit [GitHub](https://github.com).

Extension\": PdfHandler

**Overview**
- **Description:** Shows uploaded PDF files in a multipage preview layout.
- **State:** stable  
- **Dependency:** MediaWiki
- **Developer:** Martin Seidel  
- **License:** GPL v2+
- **Type:** MediaWiki  
- **Category:** Rich Articles
- **Edition:** BlueSpice Cloud, BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)
Overview
For more info, visit Mediawiki.

Features

**PdfHandler** shows uploaded pdf files in a multipage preview layout.

Together with the **Proofread Page extension** enabled, PDF files can be displayed side-by-side with text for transcribing books and other documents, as is commonly done with DjVu files (particularly in **Wikisource**).

Usage:

- The main usage of the PdfHandler extension is without user interaction. If you upload a new pdf file, the metadata will be stored in the database, and then this file can be shown in a multipage preview layout like the djvu handler does. Without this extension, pdfs will not display properly when uploaded.
- Additionally, this extension allows **Extension:ProofreadPage** to handle pdfs in side-by-side view for transcribing/proofreading, as is done on **Wikisource**.
- Another option, introduced quite long ago (r25575), is to use it to display PDF files as an image, showing a single page at a time.
- Because PdfHandler extends ImageHandler, you can use all the arguments that you would for an Image -- for example: thumb, right/left, caption, border, link, etc.

For more information please visit MediaWiki.

Extension\: PluggableAuth

Overview
**Description:** Provides framework for pluggable authentication and authorization
**State:** stable
**Developer:** Cindy Cicalese
**Type:** MediaWiki
**Edition:** BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit Mediawiki,

Features

The extension **PluggableAuth** provides a framework for creating authentication and authorization extensions. PluggableAuth provides the shared code necessary to implement these extensions, which are referred to as authentication plugins and authorization plugins. PluggableAuth must be used with exactly one authentication plugin and zero or more authorization plugins.

Template:MWlink

Extension\: Poem

Overview
**Description:** Create paragraphs and line breaks for poem formatting
Overview
State: stable  Dependency: MediaWiki
Developer: Prateek Saxena, Yair Rand  License: GPL v2+
Type: MediaWiki  Category: Search and Navigation
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit mediawiki.org.

Features

Poem is a MediaWiki extension to create paragraphs and line breaks automatically.
The extension Poem is very useful for poems but also for text that includes a lot of line breaks and paragraphs.
For more information visit mediawiki.org.

Extension: Popups

Overview
Description: Displays previews when the user hovers over a page link
State: stable  Dependency: MediaWiki
Developer: Prateek Saxena, Yair Rand  License: GPL v2+
Type: MediaWiki  Category: Search and Navigation
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit mediawiki.org.

Features

The Popups extension displays page previews summaries of the introductory content of a page when the user hovers over a link to that page.

In MediaWiki, any intro text before the first content heading (h2) is displayed in the popup together with the page image (if available). If there is no intro text available, BlueSpice displays the first sentences of the page, including the heading (unformatted).

Extension: RSS

Overview
Description: Renders RSS feeds to display them in wiki articles.
State: stable  Dependency: MediaWiki
Type: MediaWiki  Category: Rich Articles
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit mediawiki.org.

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Features

The RSS feed extension renders ("displays") one or more RSS feeds on a wiki page in a standard or user-definable format. Since version 2.00, the extension is compatible with Extension:WikiArticleFeeds which generates RSS or ATOM feeds from MediaWiki pages (authoring tool).

Use one section between `<rss>`-tags for each feed. The rss element may contain parameters if you provide them as attributes to the rss element.

For more information visit MediaWiki.

Extension\: Renameuser

Overview

Description: Provides a special page that allows user accounts to be renamed.

State: stable  
Dependency: MediaWiki

Developer: Ævar Arnfjörð Bjarmason
License: GPLv2+

Type: MediaWiki  
Category: Administration

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

Features

The Renameuser extension provides a special page which allows authorized users to rename user accounts. This will cause page histories, etc. to be updated.

For more information please visit MediaWiki.

Extension\: Replace Text

Overview

Description: Provides a form to let administrators do string replacements on the entire wiki, for both page contents and page titles.

State: stable  
Dependency: MediaWiki

Developer: Yaron Koren, Niklas Laxström
License: GPLv2+

Type: MediaWiki  
Category: Administration

Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.
Features

The ReplaceText extension from MediaWiki allows to change text passages in pages or page titles throughout the entire wiki. The existing text and the replacement text can be entered in a form. The extension searches for these words or text passages and replaces them after a confirmation screen. Filters and configurations are available. In addition to this, complex text changes can be achieved by using placeholders and regular expressions.

Changes on the page title result in moving the original page - according to the wiki principle. There are some configurations for the moved page.

For more information visit MediaWiki.

Extension: RevisionSlider

Overview
Description: Shows a slider for selecting and comparing revisions on a diff page.
State: stable
Developer:
Dependency: MediaWiki
License:
Type: MediaWiki
Category: Quality Assurance
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The revision slider is collapsed by default on the version comparison page. It can be expanded by clicking Browse history interactively.
If a user doesn’t want to see the collapsed RevisionSlider bar at the top of the diff page, they can opt-out by checking Don’t show the RevisionSlider in their preferences under Appearance -> Diffs.

Extension\: Scribunto

**Overview**

**Description:** provides a framework for embedding scripting languages into articles.

<table>
<thead>
<tr>
<th>State</th>
<th>Developer</th>
<th>License</th>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>stable</td>
<td>Victor Vasiliev, Tim Starling</td>
<td>GPL v2+ and MIT</td>
<td>Infrastructure</td>
</tr>
</tbody>
</table>

**Features**

Scribunto provides a framework for embedding scripting languages into MediaWiki pages.

For more information visit MediaWiki.

Extension\: SecureLinkFixer

**Overview**

**Description:** Rewrites URLs to HTTPS if domain always requires HTTPS

<table>
<thead>
<tr>
<th>State</th>
<th>Dependency</th>
<th>Developer</th>
<th>License</th>
<th>Type</th>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>stable</td>
<td>MediaWiki</td>
<td>Kunal Mehta</td>
<td>-</td>
<td>MediaWiki</td>
<td>Security</td>
</tr>
</tbody>
</table>

**Features**

The SecureLinkFixer extension automatically rewrites URLs to HTTPS if the domain always requires HTTPS. It uses the Mozilla HSTS preload list for the list of domains.

The rewrite is done on-the-fly as pages are parsed. No edits to the wiki are made, and the page source retains the original URL.

Extension\: Semantic Compound Queries

**Overview**

**Description:** defines a parser function, #compound_query, that can make multiple Semantic MediaWiki queries at the same time.
Overview
State: stable
Developer: Yaron Koren, and others
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

**Semantic Compound Queries** extension is meant to work with Semantic MediaWiki and allows for the display of more than one SMW inline query in one results display set. It uses its own parser function, `#compound_query`, which takes inputs similar to that of `#ask` but can take in an unlimited number of queries, instead of just one.

For more information please visit MediaWiki.

Extension: Semantic Extra Special Properties

Overview
Description: Adds some extra special properties to all pages
State: stable
Developer: Leo Wallentin, James Hong Kong, Jeroen De Dauw
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The **Semantic Extra Special Properties** extension adds some extra special properties [1] to all content pages in the wiki. See the README [2] file for detailed instructions on how to install, configure and use this extension.

Extension: Semantic MediaWiki

Overview
Description: allows users to add structured data to wiki pages through simple wikitext markup that turns links to other pages and data values in a page into meaningful properties. With this information, SMW helps to search, organize, browse, evaluate, and share the wiki's content.
State: stable
Developer: Markus Krötzsch, Jeroen De Dauw, James Hong Kong
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.
Features

Semantic MediaWiki (SMW) is an extension for managing structured data in your wiki and for querying that data to create dynamic representations: tables, timelines, maps, lists, etc. The actual homepage of Semantic MediaWiki, including user documentation in multiple languages, is semantic-mediawiki.org. There are various other pages in the MediaWiki and Wikipedia space related to SMW, but the homepage is the most up-to-date source of information.

There are a large number of "spinoff" extensions that require the presence of Semantic MediaWiki; see the category Semantic MediaWiki extensions for the full list (some of these extensions are obsolete).

Makes the wiki more accessible to machines and humans.

For more information please visit Mediawiki.

Extension: Semantic Result Formats

Overview
Description: Adds further formats to render inline query results.
State: stable
Developer: Jeroen De Dauw, Frank Dengler, Steren Giannini, James Hong Kong, and others
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

Semantic Result Formats (SRF) extension, used in conjunction with the Semantic MediaWiki extension, bundles a number of further result formats for SMW's inline queries. The individual formats can be added to the installation independently.

Check out the Semantic Result Formats documentation on the SMW wiki, which contains an up to date list of the formats added by SRF together with example wikitext and live demos.

This extension provides additional result formats for Semantic MediaWiki queries.

For more information please visit Mediawiki.

Extension: Semantic Scribunto

Overview
Description: A Semantic MediaWiki extension to natively support the Scribunto extension
State: stable
Developer: Victor Vasiliev, Tim Starling, and others
Type: MediaWiki
Dependency: BlueSpice
License: GPL v2+ and MIT
Category: Infrastructure
Overview
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

Semantic Scribunto (SSC) is a Semantic Mediawiki [1] extension to provide native support for the Scribunto [2] extension.

Template:MWlink

Extension\: SimpleSAMLphp

Overview
Description: Provides authentication using SimpleSAMLphp in conjunction with PluggableAuth
State: stable
Developer: Cindy Cicalese
Type: MediaWiki
Edition: BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

Features

The SimpleSAMLphp extension extends the PluggableAuth [1] extension to provide authentication using SimpleSAMLphp.

Template:MWlink

Extension\: SpamBlacklist

Overview
Description: Create and manage blacklists based on URL patterns to avoid spam in the wiki.
State: stable
Developer: Tim Starling
Type: MediaWiki
Edition: BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

Features

SpamBlacklist prevents edits that contain URLs whose domains match regular expression patterns defined in specified files or wiki pages. When someone tries to save a page, SpamBlacklist checks the text against a (potentially very large) list of illegal host names. If there is a match, the extension displays an error message to the user and refuses to save the page.
Extension: StandardDialogs

**Overview**

**Description:** Provides dialog user interfaces for common page actions.

**State:** stable  
**Dependency:** BlueSpice

**Developer:** Hallo Welt!  
**License:** GPL v3+

**Type:** BlueSpice  
**Category:** Skinning

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

### Features

**Extension: SyntaxHighlight**

**Overview**

**Description:** Provides syntax highlighting and code rendering.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Brion Vibber, Tim Starling, Rob Church, Ori Livneh  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Rich Articles

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

### SyntaxHighlight

Adds customizable syntax highlighting functionality.

It is powered by the Pygments library and supports hundreds of different programming languages and file formats.

**Template:Box Note**

**Extension: TemplateData**

**Overview**

**Description:** Implement data storage for template parameters (using JSON)

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Timo Tijhof, Moriel Schottlender, James Forrester, Trevor Parscal

**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Content Structuring

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.
## Features

The extension **TemplateData** introduces a `<templatedata>` tag and an API which together allow editors to specify how templates should be invoked.

### Template:MWlink

The **TemplateStyles** extension introduces a `<templatestyles>` tag to specify that a stylesheet should be loaded from a wiki page.

### Extension: TemplateStyles

<table>
<thead>
<tr>
<th>Overview</th>
<th>Description:</th>
<th>Implement per-template style sheets</th>
</tr>
</thead>
<tbody>
<tr>
<td>State:</td>

</tr>
</tbody>
</table>

For more info, visit Mediawiki.
Extension: TitleBlacklist

**Overview**

**Description:** Manage black- and whitelist to forbid creating new articles and user accounts.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Victor Vasiliev  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Security

**Edition:** BlueSpice free (deactivated), BlueSpice pro (deactivated), BlueSpice Farm (deactivated)

For more info, visit Mediawiki.

**Features**

The extension **TitleBlacklist** allows wiki administrators to block the creation, movement and upload of pages, the title of which matches one or more regular expressions, as well as blocking creation of accounts with matching usernames.

For more information please visit Mediawiki.

Extension: TitleKey

**Overview**

**Description:** Provides a title prefix search suggestion backend.

**State:** stable  
**Dependency:** MediaWiki

**Developer:** Brion Vibber  
**License:** GPL v2+

**Type:** MediaWiki  
**Category:** Infrastructure

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

**Features**

The extension **TitleKey** provides a case-insensitive title prefix search. It uses a separate table for the keys, so if it works cleanly it can be deployed without an expensive rebuild of core tables, and dumped when Wikimedia gets a nicer backend through MWSearch extension.

This extension provides no benefit if you are using CirrusSearch.[1]

For the average site administrator, the benefit of this extension is that it allows search suggestions (e.g. from Opensearch API) to be case-insensitive.

For more information please visit MediaWiki.

The **Two Column Edit Conflict View** is a new interface for the edit conflict resolution page. It displays colliding text passages in pairs next to each other, making it easier to merge your text with the one that's currently online.

You've got any questions? Please contact us at +49 (0)941 660 80 197 or sales@bluespice.com
Extension: TwoColConflict

Overview
Description: Showing a side-by-side edit merge screen for edit conflict resolution
State: stable
Dependency: MediaWiki
Developer: Wikimedia Germany (WMDE)
License: GPL v2+
Type: MediaWiki
Category: Editor
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

Template:MWlink

Extension: UnifiedTaskOverview

Overview
Description: Provides the special page “My tasks”
State: stable
Dependency: MediaWiki
Developer: Hallo Welt!
License: -
Type: MediaWiki
Category: Personalization
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

Features
The new overview page “My Tasks” (Special:My_tasks) allows users to view their upcoming tasks in the wiki. The special page can be reached via the user menu under Personal Tools> Tasks.

- Currently, workflow tasks and pending read confirmations are displayed.
- When there are tasks, this is announced via a red notification icon in the user menu.
- Each task card leads to the wiki page that is linked to the task.
Extension\: UrlGetParameters

**Overview**

**Description:** Usage of GET parameters of the URL on a wiki page.

**State:** stable

**Dependency:** MediaWiki

**Developer:** S.O.E. Ansems

**License:** GPL v2+

**Type:** MediaWiki

**Category:** Infrastructure

**Edition:** BlueSpice pro, BlueSpice free, BlueSpice Farm, BlueSpice Cloud

For more info, visit Mediawiki.

**Features**

The **UrlGetParameters** extension enables you to use and/or display the "GET" parameters of the URL, i.e. the query string, on the wiki page.

**Usage / functions**

The value of a GET parameter can be displayed on a wiki page using:

```
{{#urlget:parameter-name}}
```

**Template:** MWlink

**Extension:** UserFunctions
Overview

**Description:** Enhance parser with user functions

**State:** stable

**Developer:** Ross McClure, Toni Hermoso, Pulido, and others

**Type:** MediaWiki

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Dependency:** MediaWiki

**License:** GPL v2+

**Category:** Administration

For more info, visit Mediawiki.

Features

The extension UserFunctions provides a set of dynamic parser functions that trigger on the current user.

Template:MWlink

Extension\: UserMerge

Overview

**Description:** Merges several users into one account.

**State:** stable

**Developer:** Tim Laqua, Thomas Gries, Siebrand Mazeland

**Type:** MediaWiki

**Edition:** BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

**Dependency:** MediaWiki

**License:** GPL v3 only

**Category:** Administration

For more info, visit Mediawiki.

Features

**UserMerge** extension allows wiki users with the usermerge permission (Bureaucrat by default) to merge one Wiki user’s account with another Wiki user’s account.

The extension allows to

- merge (refer contributions, texts, watchlists, edit count of a first account A to a second account B
- delete the first account A after the merge (option box)

Limitations

- you cannot delete a user A without having merged the user A to B
- you cannot merge your own account (logged-in user) into a different user

Extras

- if you omit the "New User" field, then the extension auto-populates the New User as "Anonymous" (user_id 0), and ask you to confirm a merge to Anonymous. This is used for user deletion: you first empty (merge to user 0) contributions of a user A, and then delete the user A.
- If your version of the extension complains about an empty "New User" field you can fill in "Anonymous".

For more information please visit MediaWiki.
Extension: Validator

Overview

Description: provides generic parameter handling support to other extensions.
State: stable
Developer: Jeroen De Dauw
License: GPL v2+
Type: MediaWiki
Category: Infrastructure
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

Validator is a parameter processing framework that provides a way to declaratively define a set of parameters and how they should be processed. It can take such declarations together with a list of raw parameters and provide the processed values.

For more information please visit MediaWiki.

Extension: Variables

Overview

Description: Parser functions allowing to work with dynamic variables in an article scoped context
State: stable
Developer: Rob Adams, Tom Hempel, Xiloynaha, Daniel Werner, MGChecker
License: ISC
Type: MediaWiki
Category: Data Analysis
Edition: BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The Variables extension allows you to define a variable on a page, use it later in that same page or included templates, change its value, possibly to a value given by an expression in terms of the old value, etc.

Template:MWlink
Template:Clear

Extension: VisualEditor

Overview

Description: Is an editor you can use without having to enter special markup.
State: stable
Developer: MediaWiki
License: MIT
Type: MediaWiki
Category: Editor
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud, BlueSpice free
Features

1.6 Try free our BlueSpiceBlueSpiceDemo. ................................................................................................. 201
Description

**VisualEditor** is a WYSIWYG editor that enables you to edit wiki pages without having to enter special markup (like HTML, wiki tags). The editor menu bar resembles those of commonly used word processing programs.

Usage / Features

When activated, clicking the "edit" button will load the visual editor instead of the wiki text editor.

If this is not the case, for example because you are using a form to edit the page, the VisualEditor is also available via the "arrow" menu next to the edit button under "Edit".

Technical information

Configuration

The VisualEditor uses the Node.js service Parsoid. Because this service cannot be installed in some cases, this extension is deactivated by default.

After successful installation and configuration, the visual editor can be activated as described [here](#).

Rights (permissions)

Requirements

VisualEditor requires [BlueSpiceFoundation](#).

User manual

For detailed description and usage please visit our [help page](#).

Try free our [BlueSpice Demo](#).

Extension: WebAuthn

Overview

Description: Module for the OATHAuth extension that provides authentication using the WebAuthn API. (starting at v. 4.1)

State: beta

Developer: HalloWelt

Type: MediaWiki

Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

For more info, visit [Mediawiki](#).
Features

WebAuthn is a module for OATHAuth extension that provides authentication using the WebAuthn API.

Usage / features

WebAuthn enables support for logging-in using physical security tokens or biometric sensors along with regular password.

Technical information

For more information about installation and browser support, visit mediawiki.org.

Rights (permissions)

This extension does not provide any special rights.

Requirements

WebAuthn requires the extensions OATHAuth and GMP php to be installed.

Extension: WebDAV

Overview
Description: Adds a WebDAV endpoint that exposes the wiki content
State: stable
Dependency: BlueSpice
Developer: HalloWelt
License: GPL v3 only
Type: BlueSpice
Category: Document Management
Edition: BlueSpice pro (deactivated), BlueSpice Farm (deactivated), BlueSpice Cloud (deactivated)
For more info, visit Mediawiki.

Features

WebDAV provides an endpoint for accessing files on the wiki using different client applications or mounting the wiki content as shared drive.

Usage / features

Certain file types that have been uploaded to the wiki can be opened with WebDAV.

Opening the context menu for these files offers an option to open the file with the client application. Click this option for example to open a docx-file in Microsoft Word. All changes to the file are automatically saved in the wiki when the file is closed.
The following Microsoft Office file types cannot be opened via the context menu, but can be uploaded and versioned via Windows Explorer if the wiki configuration allows the file type: Visio, Access, Project, Publisher, SharePoint Designer, Infopath.

### Technical information

#### Rights (permissions)

WebDAV offers several ways for authenticating the users with the client application.

**MediaWiki authentication**

This type of authentication makes the client application prompt the user for the wiki username and password information when opening the file and/or mounting the drive. This type of authentication can only be used in normal local login wikis (no SSO, no LDAP).

**Token authentication**

This type of authentication appends a token to the URL that is generated for the user and file. On all subsequent requests from the client application, the token is evaluated wiki-side and the request is allowed or rejected based on the outcome of the token verification.

This is the preferred way of authentication and can (and should) be used on all types of wikis. For mounting drives when using this type of authentication, the static token that is generated per user must be included in the URL. The user-specific drive mounting URL is available in the user preferences, under the tab *User profile*. This URL must be used to mount the drive.

#### Requirements

This extension requires BlueSpiceFoundation.

There are three extensions that make up the WebDAV suite:

- **WebDAV**: Plain MediaWiki extension - provides the infrastructure.
- **BlueSpiceWebDAVClientIntegration**: Integrates WebDAV into BlueSpice - namely ContextMenu.
- **BlueSpiceWebDAVMinorSave**: Interferes with the saving process. It uploads a new version to the wiki only after a user has closed the client application, even if the user saved the file multiple times while editing. This allows having only one revision per complete edit rather than for each save. This functionality is largely experimental and might not work properly. Can be disabled without issue.

**BlueSpiceNSFileRepoConnector** interacts with WebDAV, and allows WebDAV to work with files that are in namespaces.
More info

For detailed description and usage, visit our help page.

Extension\=: Widgets

Overview
Description: integration of external content from social media sites.
State: stable
Developer: Sergey Chernyshev, Yaron Koren
License: GPL v2+
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The Widgets extension allows the creation of raw HTML pages that can be embedded (similarly to templates) in normal wiki pages. You do this by creating pages in the Widget namespace.

They avoid the security problems of raw HTML in editable wiki pages because the privilege to edit in the Widget namespace is managed.

Many pre-written Widgets are available.

For more information please visit MediaWiki.

Extension\=: WikiEditor

Overview
Description: Provides an improved interface for editing Wikitext
State: stable
Developer: Trevor Parscal, Roan Kattouw
License: GPL v2+
Type: MediaWiki
Edition: BlueSpice pro, BlueSpice free, BlueSpice Farm, BlueSpice Cloud
For more info, visit Mediawiki.

Features

The extension WikiEditor provides an improved interface for editing Wikitext. It is the editing interface that Wikipedia started using in 2010 for desktop users.
It includes an extendable framework with a set of feature-based modules, each of which can be selectively enabled or disabled, aiming to improve the user experience of editing in different ways.

For more information please visit MediaWiki.

Extension\: Workflows

### Overview

**Description:** Allows defining and executing different types of workflows.

**State:** stable

**Dependency:** MediaWiki

**Developer:** Hallo Welt!

**License:** GPL v3+

**Type:** MediaWiki

**Category:** Quality Assurance

**Edition:** BlueSpice pro, BlueSpice Farm, BlueSpice Cloud

View help page

### Features

Workflow functionality based on BPMN. BlueSpice included some standard workflows. Custom workflows can be created additionally.

A list of all MediaWiki and BlueSpice extensions for the current version of BlueSpice.

### List of Extensions (194)

- Additionally required license for DocX export (optional)

Legend:

- : Extension is **not included** in this Edition
- : Extension is **included**, but **deactivated** by default
- : Extension is **included** and is **activated** by default

</table>

**Additionally required licenses**

BlueSpice is delivered free of legal defects and without hidden additional licenses. There is only one extension which charges an additional fee for the enhancement of the existing function:

- **PHPDOCX Pro**: This additional license is only needed if you want to use the export to DocX format.
