7.1 Extension/BlueSpiceArticleInfo

BlueSpiceArticleInfo contains meta information about a content page.

### Contents

1. Viewing the page information ................................................................. 1
2. Configuration ......................................................................................... 2
   2.1 Output ............................................................................................ 2
3. Related info .......................................................................................... 3

### Viewing the page information

The lists of meta information about a page are displayed in the page information flyout of the quality management tools.
The following information is available:

- Time of the last edit
- Last editor
- Number of views
- The categories the page belongs to. These can be edited directly from here.
- Templates used on the page
- Subpages of a page (visible only when the page actually has subpages)

### Configuration

In Config manager, you can change the update frequency for this information. Here, you choose *Extension* from the select menu and then *BlueSpiceArticleInfo*.

![Settings in ConfigManager](image)

### Output

*BlueSpiceArticleInfo*, together with *BlueSpiceAuthors*, *BlueSpiceReaders*, and *BlueSpiceExtendedSearch* is part of the *Page information* in the quality management tools.

- **Update interval in seconds**: Sets the refresh rate for the "Last edit" value. By default, this date is updated every 10 seconds via JavaScript.
BlueSpice Layout

Your wiki is divided into several unique areas that group the features of the wiki in a meaningful way. Here we give you an overview so that you can easily find the functionality that you are looking for.
Note: Some features are disabled by default in your wiki or only visible to specific user groups such as administrators.

### Layout area

<table>
<thead>
<tr>
<th>Layout area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-Custom menu</td>
<td>A wiki administrator can create custom navigation to pages inside and outside the wiki.</td>
</tr>
<tr>
<td>2-Main toolbar</td>
<td>Contains important elements such as the logo area, the search field and access to the user profile.</td>
</tr>
<tr>
<td>3-Navigation</td>
<td>The &quot;heart&quot; of the page organization. From here, users can access all pages, depending on their permissions. Many navigation elements can be customized.</td>
</tr>
<tr>
<td>4-Content area</td>
<td>Here you create and edit all wiki content. Discussions are also located in this space.</td>
</tr>
<tr>
<td>5-Page tools</td>
<td>Powerful page management features. This includes important tools for the quality management of a page.</td>
</tr>
</tbody>
</table>

Config manager
1. Getting started

About Config manager

With the Config manager, a wiki user with sysop rights can manage all BlueSpice wiki-wide settings in one place. In the navigation, it is located under Global navigations > Management > Config manager. This link loads the page Special:ConfigManager.
1. Getting started

Layout

Filter options

All settings can be accessed through the following filter options:

- **Feature:** group by type of functionality the setting belongs to (search, administration...)
- **Extension:** group by extension name
- **Package:** group by BlueSpice edition and services (BlueSpice free, BlueSpice pro, Matomo)

All settings are available in any type of grouping. Changing the grouping type does not add or remove setting options. It just groups them differently.

After settings are adjusted, they can be saved by clicking *Save*, or reset to the default settings by clicking *Reset*. 
Searching for settings

A search bar is located above the list of settings. Type in a keyword such as "logo" to find the corresponding setting. The search returns settings regardless of the currently selected group.

Note: The search field has to be empty if you want to see the filter menu instead of the search.

Settings by extension

BlueSpiceFoundation

- **Logo path:** The logo image should be stored in the /images folder of your installation. If you store it in the /skins folder of your BlueSpice installation, it could be overwritten with an upgrade.

To upload the logo directly in the wiki:

1. **Upload** the logo on the page *Extended file list (Special:ExtendedFilelist)*. This is a link under the *Global actions* navigation.
2. **Search** for the logo name in the extended file list.
3. **Click** on the thumbnail image of the logo. This opens the logo on a separate page.
4. **Copy** the relative logo path from the address bar. In a typical Wiki configuration, this path starts with `/w/...`.

5. **Paste** the logo path into the text field for the logo.

6. **Click** *Save*.

7. **Refresh** the page (Strg+F5).

- **Favicon path:** The favicon image should be stored in the `/images` folder of your installation. If you store it in the `/skins` folder of your BlueSpice installation, it could be overwritten with an upgrade. Favicon images have the file extension `.ico`.

- **Allowed file extensions:** For security reasons, the types of files that users can upload are restricted. Here, you can allow additional file formats. If a file format is blacklisted in the server configuration, adding this file extension here will not allow this file type to be uploaded. See mediawiki.org/wiki/Manual:Page_title for more info.

- **Allowed image extensions:** The standard web image types are listed here. In general, you want to restrict image uploads to web images. See developer.mozilla.org/en-US/docs/Web/Media/Formats/Image_types for more on browser-supported image types.

### BlueSpiceAbout

- **Show link “About BlueSpice” in the main menu:** Shows or hides the link to the page AboutBlueSpice in the main navigation.
BlueSpiceArticleInfo

BlueSpiceArticleInfo, together with BlueSpiceAuthors, BlueSpiceReaders, and BlueSpiceExtendedSearch is part of the Page information in the quality management tools.

- **Update interval in seconds:** Sets the refresh rate for the “Last edit” value. By default, this date is updated every 10 seconds via JavaScript.

**BlueSpiceAuthors**

BlueSpiceAuthors, together with BlueSpiceArticleInfo and BlueSpiceReaders, is part of the Page information in the quality management tools.

- **Display authors:** Show or hide authors on the page information page.
BlueSpiceAvatars

An avatar image is automatically generated if the user does not upload a profile picture or if the user decides to create an avatar image in the preferences.

- **Generator**
  - **InstantAvatar:** Generates an avatar image based on using the initials of the Real name or the Username
  - **Identicon:** Generates an avatar image based on parts of the user’s IP address.

BlueSpiceBookshelf

- **Use the display title from book source on article:** Shows the title from the book navigation as page title instead of the page name.
Note: If the page additionally contains a {{DISPLAYTITLE}} tag, the display title of the page is shown instead of the book title.

- Prepend article table of contents and headlines with book numberation
- Supress namespace prefix of book articles in output

BlueSpiceChecklist

- **Mark checklist changes as minor edit**: If this setting is active, changes to a checklist (for example, checking a checkbox) in view mode are logged as minor edits. If this setting is inactive, a change to the checklist is recorded as a regular version in the page history.

BlueSpiceExtendedSearch

- **External file paths**: External locations to scan for and index files from. These locations are entered in key/value pairs of Physical path and URL prefix.
  - **Physical path**: Storage path. For mounted drives, for example: X:\Documents
  - **URL prefix**: All files indexed from the indexed physical location are prefixed in the search results. It should be used if files are available from a web server. By default, the URL prefix is set to the same value as Physical path.
- **Use simple autocomplete**: forces a more compact autocomplete (1-column layout, no thumbnail preview).
- **Automatically set language filter**: This setting applies to multi-language wikis. It returns search results for a user only in the user's language. Users can set their language in their preferences.
- **Exclude patterns**: Files at external file locations can be excluded from search based on regular expression patterns.

**BlueSpiceExtendedStatistics**

- **Exclude these users**: Some user groups, like WikiSysop can skew the statistics, for example the statistics for search queries or because they complete automated maintenance tasks. These types of user groups can be excluded from the statistical results.
- **Maximum number of interval steps**: Sets the size of the x-axis for the results. For a few days, select the interval Day or Calendar Week, for periods over one year, select Year or Month. If you do not get any results for your query, try to adjust the interval accordingly.

**BlueSpiceInsertCategory**

- **Insert category with its parents**
- **Set page categories as default in upload dialog**
BlueSpiceArticleInfo

BlueSpicensertLink

- Allow unmapped links
- Allowed locations for external files
  - Filesystem prefix
  - Web accessible prefix:

BlueSpicePageTemplates

- Force target namespace:
- Hide default templates: Hides the default Empty page template.

BlueSpicePermissionManager

- Backup limit: Sets the number of backups for the permissions manager. Each time the page Special: PermissionManager is saved, a backup is created. If the backup limit is set to 5, the last five versions of the permissions configuration are saved as backups.

BlueSpiceReaders

- Number of readers to display: Sets the number of readers that are displayed on the Page information in the Quality management tools.

BlueSpiceSaferEdit

- Interval for lookup for concurrent editings: Sets the time in seconds for checking if another person is editing the page.
- **Show name of current editor**: Shows or hides the name of the user who is currently editing the page.

### BlueSpiceUEModuleBookPDF

- **Table of Contents**
  - *Only article titles (indent by grade)*: Only shows the article titles in the main contents table of the PDF.

![Table of contents](image)

- *Embed article TOCs (No indent of article titles)*: Shows the table of contents for each article in the main contents table of the PDF.

![Embed article TOCs](image)

### BlueSpiceUEModuleHTML

- **Hide namespace prefix in PDF**: If activated, the namespace is shown in the HTML main heading.

**Note**: If the page contains a “displaytitle” tag in the page source, the page display title is shown and this setting has no effect.
BlueSpiceUEModulePDF

- **Hide namespace prefix in PDF**: If activated, the namespace is shown in the PDF main heading for a page.

![Namespace in heading](image)

**Note**: If the page contains a “displaytitle” tag in the page source, the page display title is shown and this setting has no effect.

BlueSpiceUniversalExport

- **Metadata (standard, JSON)**: Additional data to be passed to the rendering template in JSON format. This data can be used in the export template. The template itself is maintained server-side.
- **Metadata (override, JSON)**: Allows overriding standard data sent to the rendering template in JSON format. Values that are set by default can be overridden with this option.

BlueSpiceVisualEditorConnector

- **Enable VisualEditor for BlueSpice extensions**
- **Configuration variable to use a simplified save process**
- **Upload type**
  - Original (Here a confirmation of the rights of use/upload is obtained, file name and namespace of the file can be changed, a category can be assigned and a description of the file MUST be given).
  - Simple (No confirmation of required rights is obtained here, the name and namespace of the file can be changed, a description and a category can be assigned, but does not have to be specified)
  - One click (No confirmation about required rights is obtained here, the image cannot be renamed and no category can be assigned. Only the namespace can, but does not have to be adjusted before uploading)
BlueSpiceWhoIsOnline

- **Time in seconds until a user is marked as offline:** The system checks every \( x \) seconds if a user logged out and no longer displayed as online. This can be less frequent than the update interval for newly logged-in users.
- **Update interval in seconds:** The system checks every \( x \) seconds for users.

BlueSpiceExpiry

- **Show watermark for expired pages in PDF:** Shows the watermark for expired pages in PDFs.
- **Show watermark for expired pages in print version:** Shows the watermark for expired pages when a page is printed.
- **Show watermark for expired pages:** Shows a watermark on the page itself.

BlueSpiceReview

- **Only the owner of a review can change it:** If this is unchecked, any user with edit rights can update a workflow.

BlueSpiceReviewExtended

- **Workflow will be added to page history:** This enables that workflow votes are listed under the page history with the corresponding version.
BlueSpiceFlaggedRevsConnector

Export

The export settings affect how the pages of a book are generated in the PDF export.

- **Bookshelf: List accepted revisions log:** Shows a log of stable page versions of pages in the PDF and when these pages were put into accepted status. If editors did not provide a comment when accepting the page, the *Stable comment* field for a revision is empty.

  ![accepted revisions log]

- **Bookshelf: List pages without stable revision:** Displays a list of PDF pages at the beginning of the PDF that only exist as a first draft and have no released version.

  ![Not stable pages]

- **Bookshelf: List pages without FlaggedRevs:** Displays a list of PDF pages that do not have a release mechanism at the beginning of the PDF.

  ![Not FlaggedRevs namespace]

- **UEModulePDF: Show FlaggedRevs info below main heading:** Prints the latest revision dates (last acceptance and last edit date) below the heading.
Quality assurance

- **Automatically set the page to stable, when the workflow was finished successfully:** The workflow ends with setting the page status to stable.
- **Automatically delete the workflow, when a page was marked as stable:** The workflow is deleted.
- **Show unstable pages for following groups:** If the group `user` is removed from the `BlueSpiceFlaggedRevs` configuration, users in this group will not be able to see draft versions when they are added as reviewers in a review process. When the group user is removed, only `sysop` and `reviewer` users can access drafts. If you want other groups, for example `editor`, to see draft versions, you need to add them to the configuration. If no user groups are specified in the configuration field, not even reviewers and sysops users will see a visual status indication of a page. They will have access to drafts through the revision history for the page instead.

Searching and Navigation

- **Indexing only stable versions:** Draft versions are excluded from the search results. If a page does not have a stable version, it is not shown as a search result.

BlueSpiceSocialBlog

- **Use teaser text for blog entries in the timeline:** When you create a blog entry, you can create a teaser text for it by clicking the cogwheel symbol in the blog entry form. If this setting is active, the teaser text will be shown on the page `Special:Timeline` instead of the first part of the content.
BlueSpiceSocialTopics

- **Automatically create all discussion pages.** If a user creates the first discussion topic for a page using the link in the page footer of a wiki page, the needed discussion page is automatically created first.

  ![Create discussion topic](image)

  A message "This discussion page was created automatically" is inserted on the discussion page.

If this setting is deactivated, the user is directed to the "Create page" default page first.

BlueSpiceMatomoConnector

- **Site ID:** Matomo ID of the wiki. You can find the site ID as a url parameter in the browser address bar when you are logged into Matomo.

  ![Matomo ID](image)

- **Base url:** The url to your Matomo installation.
- **Show opt-out link in footer:** Displays a link in your wiki footer, usually named *Analysis service.*
On the Analysis service page, there is a checkbox that allows a user to opt-out from being tracked for analysis purposes.

![Matomo opt-out checkbox](image)

**Related info**

- [Reference:ConfigManager](#)

**Page info: authors**

**BlueSpiceAuthors** displays the profile images of the users who have contributed to a wiki page.

**Page information**

Authors of a page are listed on the *Page information* under the quality management tools.
Configuration

In the Config manager you can change if authors are shown on the Page information or not.

BlueSpiceAuthors, together with BlueSpiceArticleInfo and BlueSpiceReaders, is part of the Page information in the quality management tools.

- Display authors: Show or hide authors on the page information page.
Authors are listed in their role of original author or subsequent editor.

Related info

- Reference:BlueSpiceAuthors

Page info: readers

The extension **Readers** displays the readers of a wiki page.

### Contents

1. Viewing the readers of a page ................................................................. 26
2. Configuration .......................................................................................... 27
3. Related info ............................................................................................ 28

### Viewing the readers of a page

Users must have admin rights to see the readers of a page. The list of readers is shown on the page information, which can be accessed from the *Quality management* tab in the page tools.
Readers in the page information flyout

Admin users can also access the page `Special:Readers/Page_Name`. This special page shows the list of all readers of a page with the date of their last visit.

Configuration

In the Config manager, wiki admins can change the settings for this feature. Here, the number of readers to be shown in the flyout can be changed (defaults to 10).
Related info

- Reference:BlueSpiceReaders

Extended search

**ExtendedSearch** replaces the default MediaWiki search engine. It is based on the **Elasticsearch** engine and provides many improvements over standard MediaWiki search both in terms of quality of indexed content and user interface. Pages and files are indexed immediately and available for searching in real-time.
Usage

Extended search offers two ways of searching for content:

1. Autocomplete
2. Search Center

By default, the search indexes:

- wiki pages: all content pages, except for pages in the MediaWiki namespace
- special pages: all pages in the namespace *Special*
- repo files: files uploaded to the wiki - for text files like Word documents and PDFs, this includes content and metadata
- external files: files from arbitrary locations from accessible storage paths (e.g., mounted drives)
- social entities: entities (pages) created by the *BlueSpiceSocial* extension, like blog posts and user profiles

Autocomplete

The search box in the main toolbar offers with autocomplete functionality is available from any page on the wiki. Autocomplete matches only page and file titles, but does not provide a full-text search.

After typing in the search bar, an autocomplete popup appears:
This popup is divided in two columns.

**Left column:**

- **Primary results:** These are the results that are direct matches for the search term. The exact matches are shown in bold letters.
- When looking for the term "quality management", it is also possible to type in "qual man" and the search starts looking for matches.
- The best match is often shown with a thumbnail preview as a top search result.

**Right column:**

- **Tools and secondary results:** Tools are displayed in the top portion of the right column and contain:
  - a button to create the page with the current search term as the title (only if user has permission to create new pages)
  - a button to execute full-text search for the current term. Selecting this option leads to the Search Center.

In the bottom portion of the right column, secondary results are displayed. Secondary results are matches that do not directly match the given term, but might be relevant for the user. These show up only in certain contexts:

- If there are significantly more matches for a similar term than the term actually searched for (in a situation of a typo for example)
- If the namespace or subpage pill is present (see next section). In this case, secondary results will show direct matches in other namespaces/pages.

**Namespace and subpage "pills"**

Autocomplete search bar supports pills for namespaces and subpages.

If a user types Manual:, a pill for the namespace "Manual" appears and the search for the following term is limited to this namespace. Subpage pills work in the same way. If the user types in PageName/, any term after that is matched in the context of that page. If you search for "TestPage/Te", for example, the search will match only subpages of "TestPage" that contain "Te" in the title, like "TestPage/Test" and "TestPage/TestSubpage".

**Configuration**

Previously explained is the full version of the autocomplete popup. Wiki admins can also choose to use "Simple autocomplete", which contains only one column with primary results and tools, without secondary results. This type of autocomplete is also more compact. This setting is available from BlueSpiceConfigManager, under Extension > BlueSpiceExtendedSearch > Use simple autocomplete.
Search operators

Since the autocomplete search only searches for titles, search operators such as AND or OR are not supported. However, they are supported using the Search Center.

Search Center (extended search)

As soon as you trigger the full-search with the magnifying glass symbol or the Enter key, the wiki switches to the Search Center. This is a special page that offers the full functionality of the search. The search in the Search Center is carried out using the same search bar that is also used for autocomplete.

Here, the search engine carries out a full text search, which also includes the metadata of documents. It does not index the wikitext of a wiki page, but rather the rendered content, that is the output by the browser.

Search operators

To use search operators in the full-text search, the following syntax can be used:

- (Sandbox) AND (Widgets) - returns pages that contain both the term sandbox and the term widgets
- (Sandbox) OR (Widgets) - returns pages that contain either the term sandbox or the term widgets.
- (Sandbox) NOT (Widgets) - returns pages that contain the term sandbox but not the term widgets.

The terms have to be included in parentheses and the search operators have to be written in uppercase letters.
Elements

- **Hit count** - shows how many matches a search has returned. It may be exact or approximate. Approximation is due to dynamic check for permissions to view each page in the results, some results may not be shown to the user with no adequate permissions event if it matches the search term.

- **Tools** - these are located in the top right as a set of buttons:
  - Create a page - represented by a "plus" button - will create a page with current search term as a title (only visible if user has permission to create pages)
  - Add filters - represented by a "funnel" icon - opens a dialog where users can select the type of filter to apply to the search.

- **Search options** - represented by a "gear" icon - opens a dialog where users can change settings for the current search. It provides options like the number of results per page, sorting field and order.
Export search - represented by the "export" icon - opens a dialog to export current search results to a dedicated page (only visible to authorized users, by default admin users).

Filter: Filters are displayed in form of pills below the results counter. Each filter pill represents a different attribute. Filter values can be changed by clicking on the filter pill and selecting the desired options from the popup that will open. Filter can be removed by clicking on the "x" button in each pill.

Results: If current search criteria yield any results, a list of results is displayed. The information available in the results is depending on the result type):
- Main title of the result (page title, file name...)
- Result type
- Size and extension (for files)
- Thumb image (for images) or file type icon (for other file types)
- Redirect information
- Original name (for wikipages, if the page display title is different than the actual page title)
- Secondary information like page categories, modification and creation date, author, etc.
- Snippet of the matches in the content of the page (if there are matches in the page content),
- Sections with matches in the content (for wikipages)

In case there is an exact match for a given search term, the result that matches exactly is displayed as a "featured" result. Such a result displays a preview image of the page and always displays the content snippet, regardless of whether there are matches in the content or not.

Results relevance

All logged-in users can mark certain results as "favorites" by clicking on the star symbol in the right corner of each result. Files marked as "favorite" will score higher in future searches - this is not visible immediately, however, but happens over time. One user's relevance settings won't affect other user's searches. Results can be unmarked as "favorite" by clicking on the "star" symbol again.
Exporting search results

After executing the search, administrators can export (save) the results to a specific page using the "Export" command from the "Tools" menu. The list is exported to MediaWiki:PageCollection/LISTENNAME.

Only valid wikipages are exported. The pages contained in a list can be included in a book in the book function via Mass add> Source: Page collection.

Configuration

In the BlueSpiceConfigManager, under settings for the extension BlueSpiceExtendedSearch, the following configuration options are available:

- **External file paths**: External locations to scan for and index files from. These locations are entered in key/value pairs of Physical path and URL prefix.
  - **Physical path**: Storage path. For mounted drives, for example: X:\Documents
  - **URL prefix**: All files indexed from the indexed physical location are prefixed in the search results. It should be used if files are available from a web server. By default, the URL prefix is set to the same value as Physical path.
- **Use simple autocomplete**: forces a more compact autocomplete (1-column layout, no thumbnail preview).
- **Automatically set language filter**: This setting applies to multi-language wikis. It returns search results for a user only in the user's language. Users can set their language in their preferences.
- **Exclude patterns**: Files at external file locations can be excluded from search based on regular expression patterns.

**SearchAdmin**

`Special:SearchAdmin` is a special page for wiki admins. This page provides stats on documents indexed in the search.

**Related info**

- **Reference:BlueSpiceExtendedSearch**
BlueSpiceArticleInfo provides meta information on a particular page.

Usage / Features

The most important information, like the time of the last edit and user who last edited the page, is displayed directly in the view mode of a page.

The information related to the page is shown in a flyout and are accessible from the page tools.

The following information is included:

- Time of the last edit
- Last editor
- Number of views
- Categories the page
- Templates used on the page
Subpages of a page (visible only when the page actually has subpages)

Technical information

Configuration

This extension has no configuration options.

Rights (permissions)

This extension requires no special rights, all users with "read" permission for the page can see the page information.

Requirements

BlueSpiceArticleInfo requires BlueSpiceFoundation.
