3. User rights

3.2 Extension/BlueSpicePermissionManager

**Access to the permission manager**

To manage permissions, the extension **BlueSpicePermissionManager** provides the administrator interface. It is located under *Global actions > Management > Permission manager*. This links to the page *Special:PermissionManager*:
Role-based permissions

In BlueSpice version 3.0 roles were introduced as a way to manage wiki rights. The main intention of using roles is to simplify rights management.

Roles represent a collection of individual permissions that are necessary to perform certain function on the wiki. For example, for a user who is supposed to only read the wiki, many permissions in addition to the "read" permission are needed: the ability to change their own settings, to search the wiki, to view page ratings, and so on.

All permissions that make up a logical group are encapsulated in a role, in this example the role "reader". If wiki admins want to grant read-only rights to a user group, they only need to assign that group the "reader" role, instead of assigning many individual rights.

By assigning roles to a group, all users belonging to that group will receive the rights contained in these roles. Roles are not assigned directly to users, but to groups instead. Users are then assigned to one or more groups.

Default roles

By default, BlueSpicePermissionManager includes a number of pre-defined roles that serve most user needs on the wiki. The individual permissions contained in a role can be seen by clicking the info icon in front of the role name. It opens a dialog with a permissions list for the role:
### 3. User rights

<table>
<thead>
<tr>
<th>Role</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bot</td>
<td>typically assigned only to the bot group</td>
</tr>
<tr>
<td>admin</td>
<td>all available rights. It should be assigned only to wiki-admin groups</td>
</tr>
<tr>
<td>maintenancesadmin</td>
<td>very similar to the admin role, used for user groups that are responsible for maintaining wiki integrity</td>
</tr>
<tr>
<td>author</td>
<td>all permissions necessary for creating content on the wiki</td>
</tr>
<tr>
<td>editor</td>
<td>create content, edit and delete content, create reviews</td>
</tr>
<tr>
<td>reviewer</td>
<td>all reviewing actions</td>
</tr>
<tr>
<td>accountmanager</td>
<td>user account management rights</td>
</tr>
<tr>
<td>structurmanagre</td>
<td>move (rename) pages, create and delete namespaces</td>
</tr>
<tr>
<td>reader</td>
<td>basic read-only access</td>
</tr>
<tr>
<td>accountselfcreate</td>
<td>this role must be assigned to the &quot;*&quot; groups to allow users to self-create user accounts</td>
</tr>
<tr>
<td>commenter</td>
<td>cannot create and edit content, can only comment on existing content</td>
</tr>
</tbody>
</table>

#### The roles matrix

The permission manager consists of the group tree (1) and the role matrix (2):
The **group tree** (on the left) shows all existing groups:

- **Group "*"**: all non-logged-in (anonymous) users
- **Group "user"**: all logged-in users, the default group for all users
- **Subgroups of group "user"**: all groups that are defined on the wiki, either by default, by MediaWiki, or custom groups created by the wiki admins. System groups, created by MediaWiki, can be hidden by unchecking the "Show system groups" checkbox above the tree.

The columns in the **role matrix** are:

- **Role information** (info icon): Clicking the icon shows all the permissions in a role. This list is exportable.
- **Role name**
- **Wiki**: Assignment of a role to the entire wiki. By assigning the role in this column, a user group gets permissions in this role on the wiki (all namespaces).
Individual namespaces: The following columns list every (applicable) namespace on the wiki.

- Roles can be assigned to individual namespaces. For example, the group user can get the editor role only in the namespace Public. Users in this group cannot edit content in any other. By granting a role to a particular group in a particular namespace, means that all other groups will lose permissions from this role, eg. granting role "reader" in namespace "Private" to group "sysop" means that all users in any other groups won't be able to read pages in "Private" namespace, even if they have "reader" role granted on the wiki level ("Wiki" column).
- The same role can be granted to multiple groups for the same namespace.
- Additional namespaces can be added in the matrix by clicking on the arrow in table header, then "Columns". Then the namespaces can be selected.

Role inheritance

By default, all roles granted to the (*) group will be granted to the user group, and all roles granted to the user group are granted to its subgroups. If a group inherits the role from an upper-level group field, this is indicated in the role matrix with a green background, but the checkbox is empty.

Technical info

Logging

Every change to the roles is logged in the MediaWiki log book, found under Special:Log under Permission Manager log type. These logs are available only to wiki administrators (users in groups with the role admin).

Backups

All changes to the role matrix are backed up. By default, the last 5 backups are kept. This limit can be changed in BlueSpiceConfigManager, under configs for the extension BlueSpicePermissionManager.

5 Config Manager
About Config manager

With the Config manager, a wiki user with sysop rights can manage all BlueSpice wiki-wide settings in one place. In the navigation, it is located under Global navigations > Management > Config manager. This link loads the page Special:ConfigManager.

Layout

All settings can be accessed through the following filter menus:

- Feature: group by type of functionality the setting belongs to (search, administration...)
- Extension: group by extension name
- Package: group by BlueSpice edition and services (BlueSpice free, BlueSpice pro, Matomo)
All settings are available in any type of grouping. Changing the grouping type does not add or remove setting options. It just groups them differently.

After settings are adjusted, they can be saved by clicking Save, or reset to the default settings by clicking Reset.

Searching for settings

A search bar is located above the list of settings. The search returns settings regardless of the currently selected group.

3.1 Managing groups
Accessing the group manager

The interface for the Group manager is provided by BlueSpiceGroupManager. It allows adding, renaming and deleting groups. An administrator can go to Global actions > Management > Group manager. This opens the page Special:GroupManager:

Functionality

The group manager has the following features:

- **Viewing groups:** It provides a list of all user groups
- **Creating new groups:** Clicking on the "plus" button opens a dialog for adding a new group.
- **Renaming groups:** A group can be renamed by selecting it and then clicking the wrench icon. System groups and groups declared by other extensions cannot be renamed.
- **Deleting a group:** A group can be deleted by selecting it and then clicking the "x" button. System groups cannot be deleted.
Assigning roles and users to groups

To assign users to groups, use the User manager. To assign roles (permissions) to groups, use the Permission manager.

3 UserManual:Rights concepts

An introduction to rights management

More than 100 permissions are necessary to control the user access to all wiki functions and extensions.
Depending on the actions a user needs to take, many of these permissions are related and consequently need to be granted to a certain type of user. A user with read access, for example, needs to also be able to change the user profile and add pages to a watch list. For this reason, BlueSpice uses roles and groups to manage the rights of individual users.

The following entities are part of the rights management system:

- **Permission**: Allows a specific action.
- **Role**: A set of permissions (permissions can only be set by selecting roles).
- **User**: Entity in the wiki instance database. Has a unique user name and user id.
- **User group**: A collection of users. A user is assigned to one or more groups. There are system internal groups (cannot be removed or renamed) and custom groups. In many cases the group name consists of the role and a namespace name.
- **Namespace**: Permissions can be set on a namespace level. But not on a per-page-level.

**Use case: Managing department information**

Anna (HR Manager) and Phil (HR Specialist) are maintaining all content related to the Human Resources department on the company wiki.

Some content is visible to all employees. Other content has to be restricted and only be visible to upper management and to Lea, the company's legal advisor.

After reviewing the content and access requirements, the company decides to create HR content in two namespaces: All unrestricted content goes in the Main namespace of the wiki. Sensitive information is maintained in a custom namespace called "HR".

To reflect these specific HR requirements, the wiki administrator needs to complete the following steps:

1. Create the names space (HR:) on the page **Special:NamespaceManager**.
After adding the namespace, the new namespace is displayed after pressing the "f5" key.

2. Create the necessary **groups** on the page Special:GroupManager:

- **HR_visitor**: Users in this group have only view permissions to the (HR:) namespace
- **HR_editor**: Users in this group can create and edit pages in the (HR:) namespace
- **HR_reviewer**: Users in this group can, additionally, approve documents. For this to work, the function "FlaggedRevs" is activated for the namespace. These groups are initially "empty".

3. Assign **roles** to each group on the page Special:PermissionManager. After this, each group has specific sets of permissions:
   1. The group HR_visitor:
The administrator selects the group "HR_visitor" and checks the Role "reader" only in the HR namespace. Since the reader role in the HR namespace is now assigned to the group "HR_visitor", all other groups no longer have any view permissions for this namespace:
2. The group HR_editor: The administrator selects the role editor only in the namespace HR. Since the editor role does not inherit all permissions from the reader role, the administrator also has to check the reader permissions in addition:

![Permission Manager](image)

3. The group HR_reviewer: The administrator selects the role of reviewer only for the namespace HR. Since the roles HR_visitor and HR_editor have been reserved for the groups HR_visitor and/or HR_editor before, the editor and reader permissions have to be granted as well:

![Permission Manager](image)
4. **Add users** to the correct user groups: Since Anna needs to be able to edit and approve the documents both in the HR and in the Main namespace, she has to be added to both the “HR_reviewer” and the standard “reviewer” groups:

![Add user dialog](image)

The administrator also adds the other affected users to the correct groups. The result is the following permissions configuration:

<table>
<thead>
<tr>
<th>user</th>
<th>is in groups</th>
<th>roles in namespace HR</th>
<th>roles in namespace Main</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anna (HR manager)</td>
<td>HR_reviewer</td>
<td>reviewer</td>
<td>reviewer</td>
<td>Anna can now read, edit and approve pages in both the HR and the Main namespaces.</td>
</tr>
<tr>
<td></td>
<td>reviewer</td>
<td>reader</td>
<td>reader</td>
<td></td>
</tr>
<tr>
<td>Phil (HR specialist)</td>
<td>HR_editor</td>
<td>reader</td>
<td>reader</td>
<td>Phil can now read and edit pages in both the HR and the Main namespaces</td>
</tr>
<tr>
<td></td>
<td>editor</td>
<td>editor</td>
<td>editor</td>
<td></td>
</tr>
<tr>
<td>Edith (CEO)</td>
<td>HR_viewer</td>
<td>reader</td>
<td>editor</td>
<td>Edith can now read pages in the HR namespace and edit pages in the Main namespace.</td>
</tr>
<tr>
<td></td>
<td>editor</td>
<td>-</td>
<td>-</td>
<td></td>
</tr>
<tr>
<td>Lea (Legal advice)</td>
<td>HR_viewer</td>
<td>reader</td>
<td>-</td>
<td>Lea can only read pages in the HR namespace.</td>
</tr>
<tr>
<td></td>
<td>reader</td>
<td>-</td>
<td>reader</td>
<td>All employees can read pages in the Main namespace. They cannot read the pages in the HR namespace.</td>
</tr>
<tr>
<td>All employees</td>
<td>reader</td>
<td>-</td>
<td>reader</td>
<td></td>
</tr>
</tbody>
</table>
In addition, the administrator should ensure that Anna is not the only person who can approve content. Otherwise, there would be a problem when Anna is on vacation or has no time for reviewing page edits.
