BlueSpiceSocial is a set of extensions that add social features around a wiki page. It allows users to quickly communicate on the wiki and to express their opinion on pages.

User profile

Every user has a profile on the wiki. It is displayed on the user page (User:Username). Users can access their user profiles by clicking on *My profile* in the user menu which is located in the header toolbar.

The user profile shows the user's basic information (depending on the wiki setup) and the user's profile image. Below the user info, the user's wiki activities are listed: Comments the user made, actions on pages, and in general the user's activity on the wiki. It also allows other users to leave comments on the user's profile page.

Timeline
Timeline is a special page that provides an overview of all social conversations on the wiki.

By default, it is listed on the Main navigation. You can also access the page directly at Special:Timeline. On this page, users can sort and filter existing social entries or create new entries.

Creating new entries

To create a new entry, click on the "Plus" icon to add a new timeline entry:

- **Blog entry**: Blog is used for topics to be shared with other users on the wiki
- **Microblog**: Like a blog entry, but without titles. It should be used for a short entry, e.g., a quick announcement.
- **Discussion topic**: Adds a discussion entry to a particular wiki page.

Interacting with social entities

Every entry in the timeline is called a social entity. Depending on the type of social entity, the following interaction options exist:

- **Comments**: Number of comments related to the entity. Clicking on Comments opens all current comments and allows users to add a comment (if user has the necessary permissions).
- **Recommend**: Number of users that recommended the entity. Users can add a recommendation by clicking on Recommend.
- **Linked articles**: Number of articles linked to this entity. Clicking on Linked articles shows the list of linked articles.
- **Watch/Unwatched**: Shows if the user is currently watching the entity (the user receives notifications when the entity is changed). Clicking on Watch or Unwatch changes the state of watching.
- **Resolved/Unresolved**: The status of the entity. Some entities, like discussions on a question can have a status attached to them, so that other users know if the question is answered.

Editing and deleting entities

Users can edit and delete their own entities (created by them) by clicking on the "3 dots" icon in the top right corner of the entity.
Blog

Blog is a special page showing an overview of all blog entities available on the wiki. By default, it is listed on the Main navigation. You can also access the page directly at Special:Blog. Users can sort and filter the list entries by clicking on the icons above the list.

Learn how to include the blog on any wiki page.

Page attachments

For every content page on the wiki, BlueSpiceSocial integrates an attachments section. This section shows the files that are related to the particular page. Users can add or remove files to and from this section by clicking on the "..." icon at the bottom of the section. Clicking on this icon links to Special:Attachments /Page_name, which allows managing the files attached to a particular page.

Users can attach files that are already uploaded to the wiki by clicking on the "Plus" button and selecting a file. Or, users can upload new files to be attached by dropping files into the marked area or by clicking the same area to select the files to upload.

This page also shows the history of file attachments for the page.
Page attachments can be disabled in the Page by adding the MagicWord __NOSTASH__ to the page in source editing mode.

Page discussions

Like page attachments, BlueSpiceSocial integrates a discussion section at the bottom of every wiki page. This section allows users to create comments directly on a wiki page without having to switch to the discussions page. If it is the first entry in a discussion, the discussion page is automatically created at this time.

The discussion section can be disabled in the Page by adding the MagicWord __NODISCUSSION__ to the page in source editing mode.

What is Blog?

Blog extension allows creating news feeds on the wiki. These news feeds can be shown on any page, and users can be allowed to add their own news.

Blog by default

By default, there is a link to the Blog page in the TopMenuBar, which then opens the blog, a page containing a form for writing a new blog entry and a list of previous entries.
Display Blog on any wiki page

This blog news feed can be displayed on any wiki page by adding the blog tag to the page.
This also displays a "Create new blog entry"-form on the page, unless it is disabled to use blog tag attributes.

A blog entry consists of a title, revision information (date and author of first revision), the entry itself and possibly links for comments and a permalink.

If a blog entry is too long, the link "continue reading" is displayed.
Blog tags

Blog extension offers several tags. These tags can be added to a page using InsertMagic functionality, or writing tag syntax directly to wiki code editor.

<table>
<thead>
<tr>
<th>Wiki tag</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;bs:blog /&gt;</td>
<td>Displays blog news feed on the page. It can be extended with multiple attributes. For more on attributes read section &quot;Blog tag attributes&quot; below.</td>
</tr>
<tr>
<td>&lt;bs:blog:more /&gt;</td>
<td>This tag should be placed inside the content of a blog entry (pages in Blog namespace) to define at which point in text &quot;continue reading&quot; link should be placed. This will override default cut-off length of an entry.</td>
</tr>
<tr>
<td>&lt;bs:blog:time time=&quot;YYYYMMDDHHmm&quot; /&gt;</td>
<td>This tag also should be placed inside the content of a blog entry. It allows manually defining timestamp for that particular blog entry. Timestamp is used in sorting and displaying blog entries.</td>
</tr>
</tbody>
</table>

Write an entry or create a new entry

New blog entries can be created through the form on the page containing a blog tag, on Blog special page (Special:Blog), or by directly creating new pages in the Blog namespace.

Creating a second blog

As described the default blog feed consists of “normal” wiki pages stored in the Blog namespace. Other blog feeds can exist in addition to this feed, and they can be defined by category.

For example, the category “Company news” can be designated for a second blog. In that case all pages in this category will be considered entries of this blog and will be displayed on page as blog entries. By adding <bs:blog /> tag to the page, attribute "cat" must be set to "Company news" like <bs:blog cat="Company news" />

Another option is to designate a namespace for this purpose. Using example from above, namespace "Company news" must be created and all pages inside this namespace (Company news:News1, Company news:News2) will be considered blog entries. The syntax that should be used for the blog tag in this case is: <bs:blog ns="Company news" />

Keep in mind that when blog tags with "cat" or "ns" are used, all pages from that category/namespace will be shown, so those categories/namespace should be used for that purpose only.

<bs:blog /> attributes

The following tag arguments can be used with the tag <bs:blog />:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Number of blog entries to be displayed.</td>
<td>number</td>
</tr>
<tr>
<td>cat</td>
<td>Category from which to show pages as blog entries</td>
<td>category name</td>
</tr>
</tbody>
</table>
### Tips for working with blogs

Put a link to the blog in the left hand navigation menu. Then your colleagues will be able to find the blog whenever they want.

### See also

Our reference page.

### 9.2 Working with blogs

The extension `BlueSpiceSocialBlog` is part of `BlueSpiceSocial`, the communication module of BlueSpice. In addition to the type blog, there are other types of so-called social entities, such as comment, discussion topic, attachment, or microblog.

---

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>ns</td>
<td>Namespace from which to show pages as blog entries</td>
<td>namespace name or ID</td>
</tr>
<tr>
<td>newentryfield</td>
<td>Should “Create new blog entry” be shown?</td>
<td>0 or 1</td>
</tr>
<tr>
<td>newentryfieldposition</td>
<td>Position of the “Create new blog entry” form.</td>
<td>“bottom” or “top”</td>
</tr>
<tr>
<td>renderimages</td>
<td>Should images be displayed</td>
<td>0 or 1</td>
</tr>
<tr>
<td>maxchars</td>
<td>Number of characters that should be shown before the</td>
<td>number</td>
</tr>
<tr>
<td></td>
<td>“Continue reading” link is shown.</td>
<td></td>
</tr>
</tbody>
</table>

Default values for these attributes for the whole wiki can be set in the global BlueSpice preferences. See Reference page.
About the blog

Basically, a blog is a list of comments, questions, or feedback from different users. The blog is often sorted chronologically downwards, in the sense of a public journal. A lively communication can arise when the contributions are further commented, recommended, linked with related articles or placed on a personal watchlist.

The blog function is ready for use on the special page `Special:Blog`. This page is linked directly from the main navigation in every new wiki installation. So you can start using the blog right away.

It is also possible to include the blog functionality on any wiki page. Social contributions of many types can be consolidated and displayed chronologically in a timeline and filtered and sorted as needed.

Adding the blog to a page

If you want to include a view of your blog on another page of your wiki, for example your homepage, you need to insert the necessary codeblock in the source code of your page.

To include a blog view:

1. Go to the page where you want to insert the blog or create a new page.
2. Open the page in `Source editing` mode.
3. Copy the following code block to the section in your page where you want to show the blog.

```html
<bs:timeline>
{
    "showentitylistmenu": true,
    "preloadtitles": {
        "blog": "Vorlage:Blog"
    },
    "preloadentities": [{
        "type": "blog"
    }],
    "headlinemessagekey": "Community-Blog",
}
```
After saving the page, you will see a list of existing blog entries based on the filter and sorting criteria you provided.

Blog parameters

Output format

The following table shows the blog elements and the necessary parameters to create the output:
### 9. Social wiki

#### Extension/BlueSpiceSocial

<table>
<thead>
<tr>
<th>Element</th>
<th>Parameters</th>
<th>Parameter and element description</th>
</tr>
</thead>
</table>
| 1 - header | headlinemessagekey, showheadline, showentitylistmenu, showentityspawner | Header text  
Show the header text  
Show or hide the blog menu  
Show the menu item for creating a blog entry |
| availablesorterfields | Determines which data fields are included as sorting options in the sort menu by date created or by the user who created a blog entry:  
"availablesorterfields": ["timestampcreated", "ownerid"] |
| lockedoptionnames | Determines which settings for sorting the user cannot change. |
| availablefilterfields | Determines which data fields are included as filter options in the filter menu based on Creation date and Linked pages:  
"availablefilterfields": ["timestampcreated", "tags"] |
| lockedfilternames | Determines which settings for filtering the user cannot change.  
Example: a user cannot change the filter values for Linked pages. The text field is greyed out:  
"lockedfilternames": ["tags"] |
<table>
<thead>
<tr>
<th>Element</th>

<th>Parameter and element description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 - blog menu</td>
<td>persistsettings</td>
<td>Initial settings and custom sort and filter settings are included in the page url. The url can then be used to create a link to the page with the same filter and sort settings.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>&quot;persistsettings&quot;: true</td>
</tr>
<tr>
<td></td>
<td></td>
<td>myblog?sort=[&quot;property&quot;,&quot;timestampcreated&quot;,'direction':&quot;DESC&quot;]&amp;filter=[&quot;type&quot;:&quot;blog&quot;]</td>
</tr>
<tr>
<td>3 - new blog entry</td>
<td>preloadentities</td>
<td>Shows the text field for creating a new blog entry. If it is not set, the text field is not available.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To show the text field:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>&quot;preloadedentities&quot;: [{&quot;type&quot;:&quot;blog&quot;}]</td>
</tr>
<tr>
<td>4 - existing blog entry</td>
<td>outputtypes</td>
<td>It defines the display format of the blog entry.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Standard types are: List, Short, Default, Page. (see examples)</td>
</tr>
<tr>
<td></td>
<td>limit</td>
<td>Each blog entry is a &quot;social entity&quot;.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Defines how many social entities are loaded initially.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>limit</td>
</tr>
<tr>
<td>4a - avatar</td>
<td>-</td>
<td>Shows the avatar of the user who created the blog entry or comment. It is displayed in all output types except List.</td>
</tr>
<tr>
<td>4b - title bar</td>
<td>-</td>
<td>In the output type List, the username is not displayed in the title bar.</td>
</tr>
<tr>
<td>4c - blog entry content</td>
<td>-</td>
<td>Shows the text body of a blog entry. The output type Default collapses the first paragraph with a &quot;More&quot; link.</td>
</tr>
<tr>
<td>4d - social tags</td>
<td>-</td>
<td>Blog entries always include the social tags Comments, Recommend, Linked Page, Watch/Unwatch.</td>
</tr>
<tr>
<td>4e - user menu</td>
<td>-</td>
<td>Users can edit or delete their own blog entries or comments at any time. The edit menu is visible for their own entries:</td>
</tr>
</tbody>
</table>
### Element Parameters

<table>
<thead>
<tr>
<th>Element</th>
<th>Parameters</th>
<th>Parameter and element description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 - new comment</td>
<td></td>
<td>Text field for creating a new comment.</td>
</tr>
<tr>
<td>6 - existing comment</td>
<td></td>
<td>Comments include the social tag <em>Recommend</em>. Each comment is a &quot;social entity&quot;.</td>
</tr>
<tr>
<td>7 - &quot;more&quot; button</td>
<td>morelink</td>
<td>Link target of the &quot;more&quot; button. For blogs, it makes sense to link to the page <em>Special:Blog</em> or <em>useendlessscroll</em> is set to <em>false</em>.</td>
</tr>
<tr>
<td></td>
<td>useendlessscroll</td>
<td>More blog entries are automatically loaded after the user scrolls to the end.</td>
</tr>
<tr>
<td></td>
<td>showentitylistmore</td>
<td>Shows a &quot;more&quot; button below the blog which loads more blog entries on click.</td>
</tr>
</tbody>
</table>

### Sorting

Most commonly, a blog shows the latest blog entries first. However, there are many different options for sorting the list of blog entries.

### Syntax

```json
{{
  "property": "timestamptouched",
  "direction": "DESC"
}}
```

### Properties

There are some common properties of a blog entry that are useful for sorting:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>timestampcreated</td>
<td>creation date</td>
</tr>
<tr>
<td>timestamptouched</td>
<td>last edit date</td>
</tr>
<tr>
<td>commentcount</td>
<td>number of comments</td>
</tr>
<tr>
<td>ratingcount</td>
<td>number of ratings</td>
</tr>
<tr>
<td>ownerid</td>
<td>username of the creator of a blog entry</td>
</tr>
<tr>
<td>ownerrealname</td>
<td>real name of the user</td>
</tr>
</tbody>
</table>
Direction

Blog entries can be sorted in descending and ascending order. Descending is the default order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DESC</td>
<td>sorts the blog entries in descending order</td>
</tr>
<tr>
<td>ASC</td>
<td>sorts the blog entries in ascending order</td>
</tr>
</tbody>
</table>

Filtering

Without setting the filter parameter, there will be no output on the page.

To show the blog entries of your wiki, include the following codeblock like shown in the code example above:

```json
"filter": [{
  "type": "list",
  "property": "type",
  "value": ["blog"],
  "comparison": "ct"
}]
```

This filter includes all social entities which match the type `blog`. Since we only want to show social entities of type `blog`, we only include `blog` entries in our filter. If you want to create a social timeline rather than a blog view, you can also add other types of social entities. The following example shows a timeline view that includes blog entries, discussion entries from wiki pages, and user profile information:

```json
"filter": [{
  "type": "list",
  "property": "type",
  "value": ["blog","topic","profile"],
  "comparison": "ct"
}]
```

Output type examples

The output type for a blog is added using the `outputtypes` parameter. Don't forget to include a comma before and after this parameter (unless this is the last parameter in your code):

```json
"outputtypes": {
  "blog": "Default"
}
```
Default

The output type *Default* shows the content of a blog entry truncated after the first paragraph. To view the full text, users can click on the *More* link.

---

**Suggestion for improving search results**  Created one hour and 40 minutes ago  Testuser
I have found that creating redirect pages that match typical search terms improves the search functionality of the wiki. Should we start creating lots of redirect pages or is there a better way?

![Comment options]

**Greg Rundlett über BlueSpice**  Created 2 months ago  Richard Heigi
Greg Rundlett came to the following conclusion at the EMWCon in Houston BlueSpice is really the best option out there - I think globally - for MediaWiki Enterprise, MediaWiki hosting and support.

![Comment options]

---

Short

The output type *Short* does not show the content of the blog entry. To view the content, a user has to click on the title of a blog entry. This loads the actual page for the selected blog entity.

---

![Comment options]

**Greg Rundlett über BlueSpice**  Created 2 months ago  Richard Heigi

![Comment options]

---

Page

The output type *Page* shows all blog elements, including the comments, in an expanded view.
List

The output type *List* only shows the title and the timestamp.

| Suggestion for improving search results Created one hour and 56 minutes ago Testuser |
| Greg Rundlett über BlueSpice Created 2 months ago |

Configuration

In the *Config manager*, you can change the following settings:

- **Use teaser text for blog entries in the timeline**: When you create a blog entry, you can create a teaser text for it by clicking the cogwheel symbol in the blog entry form. If this setting is active, the teaser text will be shown on the page *Special:Timeline* instead of the first part of the content.

What are magic words (or MagicWords)?

A "magic word", also known as MagicWord, is a symbol recognized by the MediaWiki software. It triggers the software to do something other than display that symbol or transclude a page with that name, but instead to use the symbol directly.

There are different types of MagicWords:

- **Behavior switch** (or "Double underscore"): __TOC__
- **Variable**: {{FULLPAGENAME}}
- **Tag**: <gallery>
- **Parser function**: {{#ifeq:x|y|true|false}}

The 4 types of MagicWords

**Behavior switch**

**Characteristics of a behavior switch**

- **Purpose**: controls the layout or behavior of the page
- **Syntax**: __NOTOC__

**Description**

A behavior switch includes or omits certain elements of the page. It is also known as "double underscore". Behavior switches can be put anywhere in the source code of the designated page (usually at the end of the page). The behavior switch __TOC__ produces as output the table of contents exactly where it was inserted on the page.====

**Variable**

**Characteristics of a variable**

- **Purpose**: returns information about the page, wiki, or date
- **Syntax**: {{PAGENAME}}
Description

Variables contain (simple) dynamic data. If a template name conflicts with a variable, the variable is used. For example, you have the variable {{PAGENAME}}. In that case, you have to transclude the template with the same name as {{Template:PAGENAME}}.

Parser Function

Characteristics of a parser function

- **Purpose**: simple "programming language" for page content (mainly in templates)
- **Syntax**: {{{#if:{{(field|)}} | {{(field|)}} | N/A }}}

Description

Parser functions are similar to variables, but take one or more parameters. Example:

```{{#ifeq:{{(type)}} | warning |
| This is a warning!
| }}
```

They are used for simple logic only, since they are hard to read and to maintain on a larger scale. If complex logic is required, consider Lua scripts in the "Module" namespace (mediawiki.org/wiki/Extension:Scribunto) and invoke using {{{#invoke:...}}}.

Parser functions can also be "tag-like", e.g. {{#ask:...}} from SemanticMediaWiki. For more information, refer to the MediaWiki help pages mediawiki.org/wiki/Help:Extension:ParserFunctions and mediawiki.org/wiki/Help:Magic_words#Parser_functions.

Tag

Characteristics of a tag

- **Purpose**: often used for custom development to process dynamic content
- **Syntax**: <smartlist />

Description

Tags are implemented in PHP as part of a MediaWiki extension. Tags with "bs:" prefix come from BlueSpice (see Reference:BlueSpiceTagSearch). All others come from MediaWiki or from third-party extensions, e.g. the extension SyntaxHighlight.
How to add a magic word

Magic words are inserted directly in the source code. Some frequently used magic words can also be added directly with the VisualEditor Insert > Magic word menu item:

![VisualEditor Insert Magic Word](image)

Related info

- mediawiki.org/wiki/Help:Magic_words
- Extension:BlueSpiceInsertMagic

9.4 Adding attachments to a page

The extension SocialWikiPage allows users to attach a file directly to a wiki page.
Attaching a file

To create the first attachment at the bottom of a wiki page, open the attachments area by clicking on the "plus" button.

If the attachments area already exists, click the "more"-button to switch to the attachments page.

On the attachments page you can add a new attachment:

1. **Add existing file**: Click the plus button to add a file that has already been uploaded to the wiki.

2. **Upload a new attachment**: Click the upload area or drag the file into the upload field to upload a new attachment to the wiki.
Deleting an attachment

To delete an attachment, go to the attachments page and click on the Delete button in the actions menu of the attachment. Deleting an attachment on a page does not delete the file itself from the wiki.

Grouped attachments

Clicking the Edit button in the actions menu of an attachment allows you to group more attachments with it. When you group attachments, they are:

- displayed together on the page
deleted together from the page
considered one entity for commenting, recommending, linking, and watching (as social entity)

Styling

By default, the icons for the attachments are shown in grey with a small label and a large icon. By updating the file MediaWiki:Common.css, the styles for the attachments can be adjusted as needed. This requires administrator rights.

Add the following styles:

```
.bs-social-entity-attachment-wrapper {background: transparent;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-unknown a span::before {
    font-family: fontawesome;
    content: "\f016";
    color: #695f5c;
}
.bs-social-entity-content-attachments div.bs-social-entityattachment-pdf a span::before {
    font-family: fontawesome;
    content: "\f1c1";
    color: #e12025;
}
.bs-social-entity-content-attachments div.bs-social-entityattachment-excel a span::before {
    font-family: fontawesome;
    content: "\f1c3";
    color: #1d8f50;
}
.bs-social-entity-content-attachments div.bs-social-entityattachment-pptx a span::before {
    font-family: fontawesome;
    content: "\f1c4";
    color: #d04727;
}
.bs-social-entity-content-attachments div.bs-social-entityattachment-word a span::before {
    font-family: fontawesome;
    content: "\f1c2";
    color: #1565c0;
}
```

You will get:

![Custom css styles for attachments](image)

Custom css styles for attachments

Related info

- Blog
User profile

BlueSpiceSocialProfile provides the SocialEntity of type profile. Furthermore, the user page is converted into a complete user profile.

User profile info

The first part of the profile page contains elements related to the user's profile info.

1. Watchlist: The profile page is by default on the user's watchlist to send notifications about any changes to the page.
(2) **Actions menu:** In the edit menu, users can edit their profile description (5) below their profile picture, update their user image and enter their profile data (3).

(3) **Profile data:** Users can enter their profile details, such as department and phone number.

(4) **User image:** The user image can be uploaded from the actions menu. For users without a user image, an avatar image is displayed instead.

(5) **Description:** The edit link in the Actions menu allows to edit the page content itself. This content is displayed directly below the profile box.

## Social timeline

Below the user profile information, a timeline of the user contributions is shown in the form of social entities. A filter allows all users to change what types of actions are displayed in the list.

![Timeline of user actions](image)

BlueSpiceSocial is a group of extensions that add social media features to the wiki. This allows users to quickly communicate on the wiki and to express their opinions on pages more easily.

**Usage / features**

BlueSpiceSocial provides the architecture for all *Social* extensions. It contains base classes, SourceTitle namespace, SocialEntity ContentModel, notifications, etc.

This extension is required by all *Social* extensions. Without another *Social* extension (e.g., BlueSpiceSocialBlog), this extension has no effect.

The following *Social* extensions are available:

- SocialArticleActions
- SocialBlog
- SocialComments
