9.3 Extension/BlueSpiceSocialMicroBlog

Microblogs work exactly like regular blogs. Unlike blogs, however, they do not have a separate title field. Users simply provide a quick message in a single text field.

**Microblog syntax**

To include a microblog on a page, copy the following tag. An explanation of the individual parameters is available on the help page for blogs:

```plaintext
{{#tag:bs:timeline|
{
  "showentitylistmenu": false,
  "preloadedentities": [{
    "type": "microblog"
  }],
  "headlinemessagekey": "Letzte Kurznachrichten",
  "showheadline": false,
  "limit": 3,
  "sort": [{
    "property": "timestampcreated",
    "direction": "DESC"
  }],
  "lockedfilternames": [
    "type"
  ],
  "outputtypes": {
    "microblog": "Default"
  },
  "filter": [{
    "type": "list",
    "property": "type",
    "value": [ "microblog" ],
    "comparison": "ct"
  }, {
    "type": "boolean",
    "property": "archived",
    "value": false,
    "comparison": "eq"
  }]
}
}}
```

This produces a microblog that looks like this:
