Line 17:

To create a subpage for the current page, select the ''New Subpage'' link from the ''New'' button menu.

Line 17:

To create a subpage for the current page, select the ''New Subpage'' link from the ''New'' button menu.

[[File:Manual:creating a page - subpage.png|alt=Creating a subpage|center|thumb|150x150px|Creating a subpage]]

===Using the search field===

Maybe information about your topic already exists. Before you create a new page, you can use the search to enter terms for your topic and check existing pages. If there is no page on your topic yet, click on the red link 'Create page ''[page name]''<nowiki/>' in the search results:

[[File:search field new.png|700x700px|link=Special:FilePath/search_field_new.png]]

The subpage is **then created as ''Current** Page/**Subpage** (**e.g**''., **Visual Editor/Tables**). If **a** page **has subpages**, the **path** is **displayed** as **breadcrumb navigation at** the **top** of the page,

===Using the "New page" button===

Next to the search box is **a button to create a page. This button is only activate if you are logged in and have write permissions on the wiki (or in a specific namespace):**

[[File:New Page**.png|214x214px|link=Special:FilePath/New_Page.png]]**

Here you can create a page or a subpage of the current page. In addition, you can also upload a file (image, PDF, Word file, etc**.) to the wiki.**

===Using a text link (redlink)===

Let's say that you want to create the "Training" page. **You can directly select any text on the current page and define it as a link to a new page. This creates a so-called redlink. From them on**, **the link exists, but there is no wiki page for it. The example page "Training" is thus also listed on the Special page [[Special:WantedPages|WantedPages]].**

With VisualEditor: Click the Link button () or press Ctrl+K to create a page. Now enter the page name. If **there is no** page **with this name**, the **page name** is **shown in red and the page icon shows a question mark. Click "Done" to create the redlink.[[File:training.png|center|350x350px|link=Special:FilePath/training.png]]**

In the source text:

When editing the source code, enter the new page name as **a link:<pre><nowiki>[[Training]]</nowiki></pre>Since** the **page does not yet exist, the link is shown in red after saving:**

[[File:training_2.png|left|250x250px|link=Special:FilePath/training_2.png]]

===Using the web address===

You can also create a page directly from the address bar of **your web browser:**

[[File:support.png|600x600px|link=Special:FilePath/support.png]]

Simply exchange the current page name with a new one. Here, we create a page "Support" in the main namespace (Main) in the **BlueSpice Helpdesk:<syntaxhighlight lang="html"> https://de.wiki.bluespice.com/wiki/Support**

</syntaxhighlight>

==Selecting a template==

When you create a page, you are always redirected to an overview page. There, select a [[Reference: BlueSpicePageTemplates|page template]]:

[[File:create-page-choose-template.png|link=https://en.wiki. bluespice.com/wiki/File:create-page-choose-template. png|center|300x300px]]

'''Creating a new page in a namespace:'''

To create a new page **in a namespace, put the name of the namespace in front of it**, **followed by a colon. Example: <code>Help:New_Article</code>**

==Tips==

*'''Browser navigation:''' When creating pages, try not to use the "back" button. You could lose content that you have not yet saved or that you want to edit again.

*'''Redirects:''' Do you have the impression that an article title is searched more often with a different synonym? Then create a new article with this name first. Then [[Manual: Using Redirects|redirect]] the page.

*'''Title choice:''' In a wiki, titles are very important. In wikis with many entries, authors may make references to pages that they deem important in the context of their entry. The page title should, therfore, clearly communicate its contetn. Single words are very good, but even short sentences like "why wikis work" can be useful names. In addition, meaningful page titles also help readers find their way around when they search for an entry.

*'''Spelling:''' When linking to an already existing page you should pay attention to their exact spelling. If you e.g. typing a <nowiki>[[hello world]]</nowiki> instead of <nowiki>[[Hello World]]</nowiki> will create a new page as the links are spelled differently. Therefore, consider also capitalization and spaces. Only at the beginning of the letter does it make no difference whether you write a small or capital letter.

*'''Namespaces:''' If you want to create an article in a different namespace, the namespace must appear before article name. Example:<code><nowiki>[[namespace: article name]]</nowiki></code>.

*'''Special characters:''' The following characters '''cannot''' be used in titles : <code> { } & ? < > \ </code>and <code>,</code>. For more information, see [https://www.mediawiki.org/wiki/Manual:Page_title mediawiki.org/wiki/Manual:Page_title].

*'''Subpages:''' The character <code>/</code> is used to create a [[subpage|subpage]].

Revision as of 10:33, 22 December 2021

An important aspect of the wiki principle is that information can be shared with other people quickly and without any "red tape". Every wiki user with edit rights should therefore be able to create and edit a page at least in one namespace without any prior knowledge or without special privileges to contribute to their knowledge.
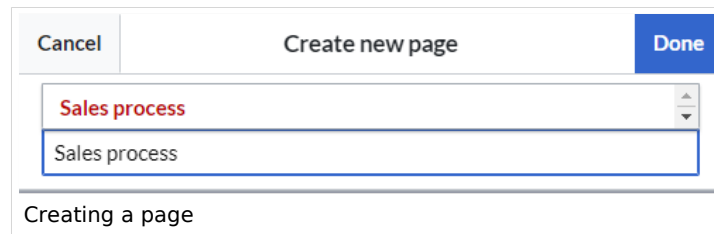

Contents

Creating a page

To create a page:

1. **Click** the *New* button in the header bar. A dialog window opens.
2. **Enter** a new page name. If the page does not yet exist, you will see a redlink.

Creating a page

3. **Click** *Done*.
4. **Choose** *Empty page* or a different page template. This step is skipped if there are no available page templates. The page opens in edit mode. You can now switch between visual and source edit mode using the Editor toolbar.
5. **Save** the page. It is now available in the main namespace of your wiki (unless you added a namespace prefix while creating the page).
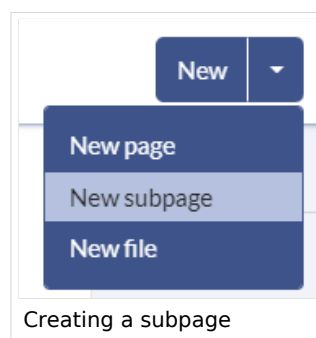

Changing the page name

If you want to change the page name after the page has been saved — e.g., to save it in a different namespace — you can move the page.

Creating subpages

To create a subpage for the current page, select the *New Subpage* link from the *New* button menu.

Creating a subpage

The subpage is then created as *Current Page/Subpage (e.g*., Visual Editor/Tables). If a page has subpages, the path is displayed as breadcrumb navigation at the top of the page,

- **Title choice:** In a wiki, titles are very important. In wikis with many entries, authors may make references to pages that they deem important in the context of their entry. The page title should, therfore, clearly communicate its contetn. Single words are very good, but even short sentences like "why wikis work" can be useful names. In addition, meaningful page titles also help readers find their way around when they search for an entry.

Alternative options

- **Search field:** Maybe information about your topic already exists. Before you create a new page, you can use the search to enter terms for your topic and check existing pages. If no suitable page exists, click on the redlink 'Create page *[page name]*' in the search results **er address bar:** You can also create a page directly from the address bar of your web browser. Simply exchange the current page name with a new one. Then, click enter to create the new page.
- **Form:** In BlueSpice pro, the extension Page Forms is available. It allows to create pages using a form.
