Categories are a feature of MediaWiki. An index page is automatically created for categories. Pages can be categorized by adding category tags to the content. These tags generate links at the bottom of the page that lead to an overview of all pages in the same category. This allows for easy browsing of related pages.

In the supplementary area at the bottom of the page

The supplement area contains a field for category assignment. Any user with edit rights can click the edit link to add or remove categories from the page. To view all existing categories with subcategories, you can click on the tree icon. Once done, the categories will be confirmed with the tick.

In the visual editor (VisualEditor)

In the page options menu of [VisualEditor](#) there is a menu item Categories. Here you can update category assignments to the page in edit mode, as well as add a sort key to the category.

In wikitext

Open an article that you want to assign to a category in edit mode. Now enter the following anywhere in the wiki code (usually at the end of the page though):

```
[[Category:Production]]  
or  
[[Category:Production]]
```

Note: On category pages, umlauts are listed at the end of the list, e.g. "Märchen" after "Muh". You can use the `{{DEFAULTSORT:sortkey}}` variable to create an alternative title for the sort (e.g. `{{DEFAULTSORT:Maerchen}}`).

It is true that:

categories can be created in any number and by any user. So before you just get started, it's always best to check which categories already exist to avoid unnecessary duplication of similar categories.

a page can be assigned to several categories.

the place in the source code where the category link is inserted is technically irrelevant. However, the convention is to include categories **at the end of an article**.

Links to category pages

For links directly to a category page, a colon is required before the namespace.

Example: `[[[:Category: new_page]]`

If the colon is missing, the link will not be created, but the page will be tagged with the category instead.

Category pages

When users click a category link, the *Category:<Category_Name>* page loads. All pages and media that are assigned to a specific category are automatically listed there.

If you click on a category page that has not yet been created - linked in red - you have the option of creating the category page.

Show all category pages

On the special page `Special:Categories` you can view a list of all existing categories in the wiki. Click on a category to go to the corresponding category page. If a page in the listing has a red background, the category is in use in the wiki, but the associated category page has not yet been created.

Category manager

The easiest way to manage categories and subcategories is through the *Special:Category manager* page. The [Category manager](#) can be reached via the menu item *Global Actions > Management > Categories*.
