Expiry

An article can be marked as "expired" after a certain date and is the ideal basis for an archiving system.

Setting an expiration date

To set the expiration date for an article:

1. **Click** *Set expiry* in the page tools.
2. **Enter** an expiration date. It could be today or any day in the future.
3. **Enter** an expiration comment (optional).
4. **Click** *Save*

When the expiration date is reached, the page shows the expiration marker "expired" in the title area. Additionally a watermark is shown on the article by default.

Unexpiring a page

To remove the expiration marker from an article, click the drop-down arrow next to the "expired"-marker in the title area and unexpire the page.

List of expired pages

To view all pages that have an expiration date, you can go to *Global settings > Tools > Expired pages*. From there, users can remove the expiration marker of any page.

Archiving obsolete pages

Administrators can create an *Archive namespace* if obsolete pages should be archived rather than deleted. Users can then [move](#) articles to this namespace.

Expiration log

Administrators can view a log with all expiration activities from the page *Special:Log*.

1. **Select** the log type *Expiry* from the drop-down menu.
2. **Click** Show.

Configuration

You can set the following options in the Config manager.

Additionally, the display of the expiry status can be moved after the page content in the [Config manager](#).
