Setting the filter option

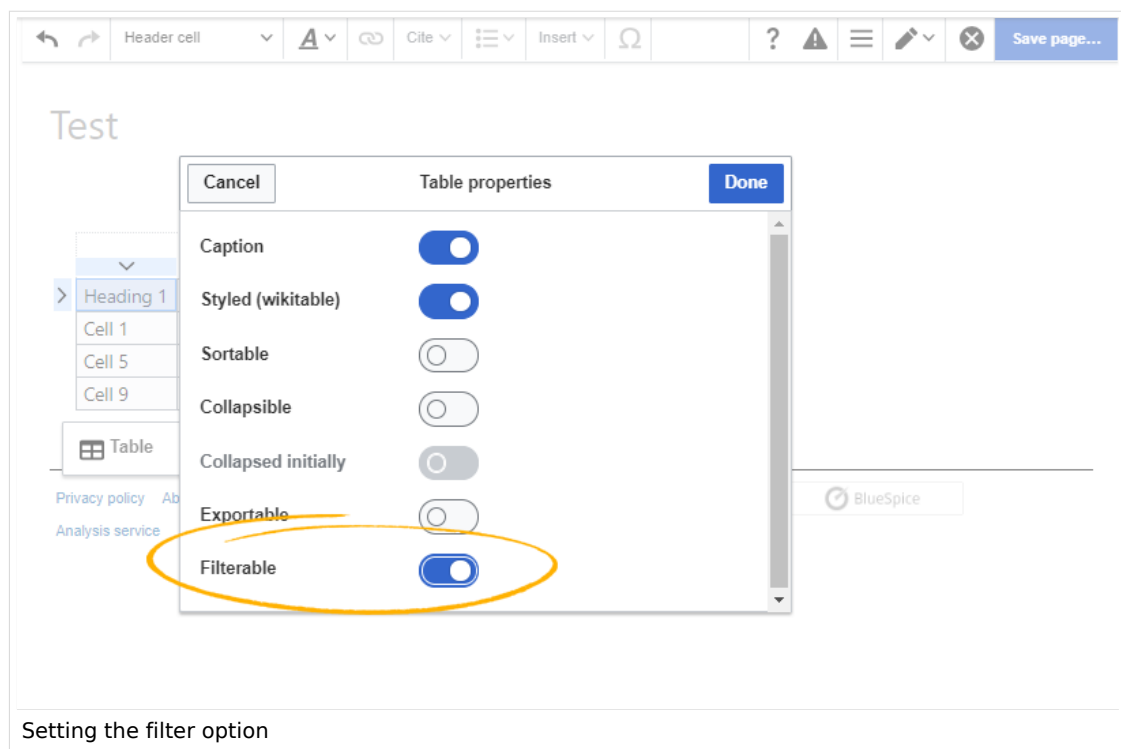

Visual editing

To apply a filterable table style to your table:

1. **Click** once in the table. This opens the table inspector.
2. **Click** *Properties* in the inspector.

3. **Activate** the slider for the setting *filterable*.

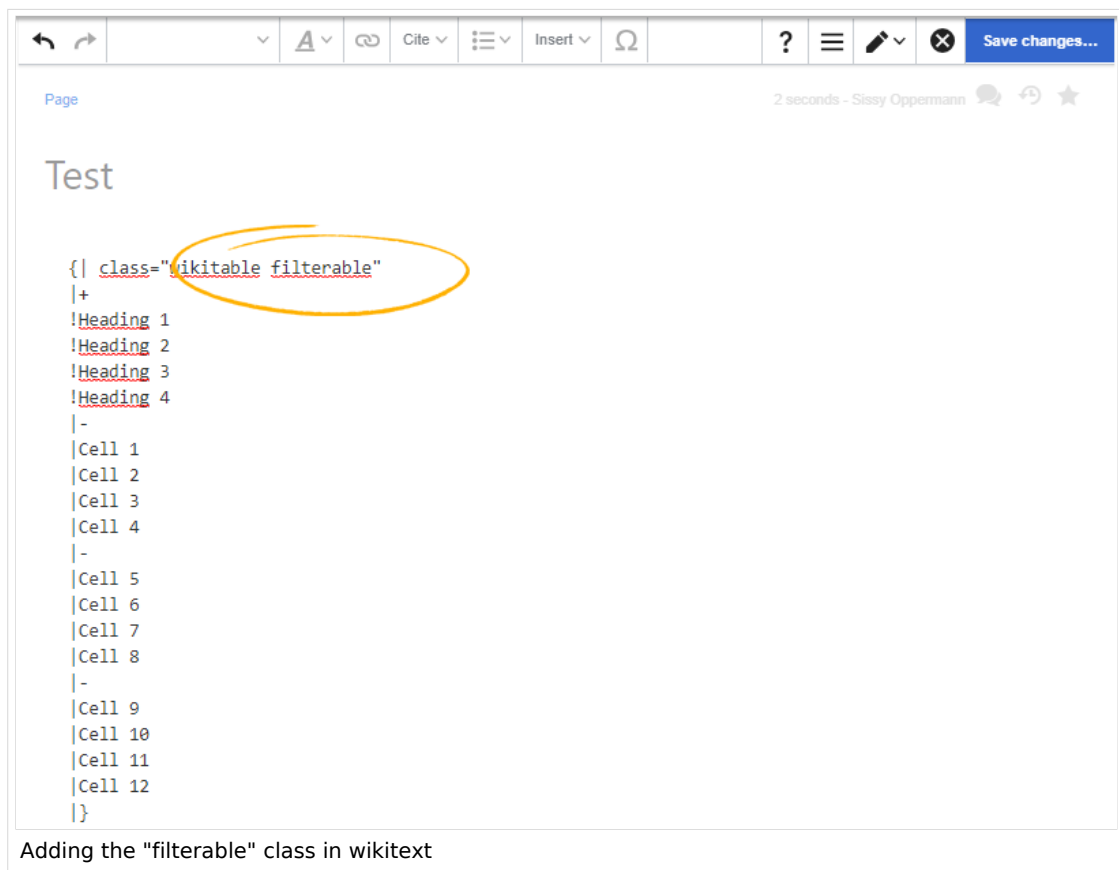

4. **Click** done.
5. **Save** the page. After saving the page, you will see a filterable table layout.

Note: Any global table styles that are applied in the table properties are ignored as long as the value "filterable" is active. A filterable table comes with its own table styling.

Source editing

In source-editing mode, add the class "filterable" to the table opening line:

```
{| class="wikitable filterable"  
|+  
!Heading 1  
...  
}
```

The screenshot shows the BlueSpice MediaWiki source editing interface. The top toolbar includes icons for undo, redo, bold, italic, link, cite, list, insert, and a search icon. A "Save changes..." button is on the right. The main editing area shows a table with the opening line `{| class="wikitable filterable"` circled in orange. The table content includes headings and cells. Below the table, the text "Adding the 'filterable' class in wikitext" is displayed.

```
{| class="wikitable filterable"  
|+  
!Heading 1  
!Heading 2  
!Heading 3  
!Heading 4  
|-  
|Cell 1  
|Cell 2  
|Cell 3  
|Cell 4  
|-  
|Cell 5  
|Cell 6  
|Cell 7  
|Cell 8  
|-  
|Cell 9  
|Cell 10  
|Cell 11  
|Cell 12  
|}
```

Adding the "filterable" class in wikitext

Filtering table columns

The special filter layout of a table is only applied in view mode.

To filter the values in the table, click on the header of the column to filter and select "Filter" from the dropdown menu. In the input field that opens, type in the filter text.
