## About hiding the page title

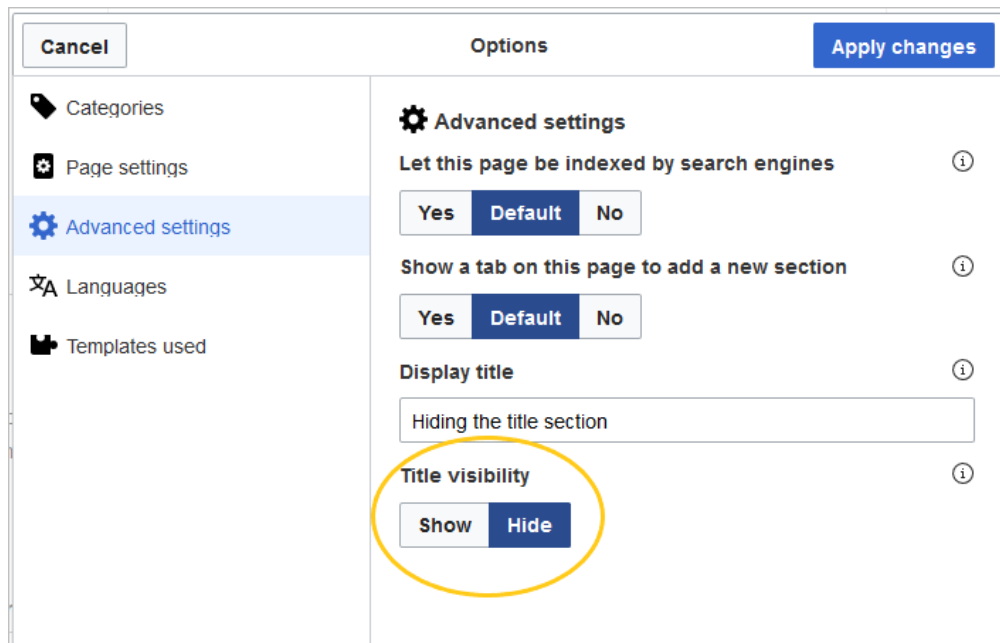

In some cases, it makes sense to hide the title of a page. For example, if you want to create a portal page:

## Usage

---

In VisualEditor, go to *Page options* > *Advanced settings*:

This adds the magic word `__HIDETITLE__` in the source code, usually at the top of the page. After saving the page, the page title is hidden in view mode.

## Technical details

---

The extension **BlueSpiceHideTitle** enables hiding the title section of the page.
