Viewing the readers of a page

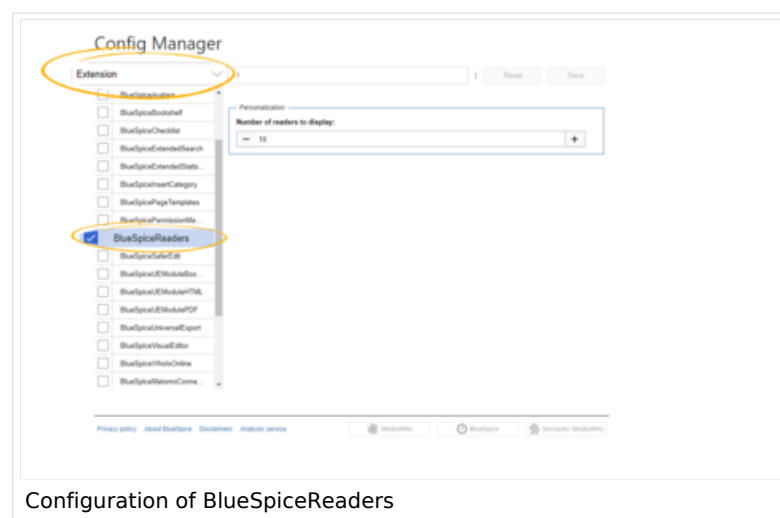

Users must have admin rights to see the readers of a page. The list of readers is shown on the page information, which can be accessed from the [page tools](#).

Admin users can also access the page *Special:Readers/Page_Name*. This special page shows the list of all readers of a page with the date of their last visit.

Configuration

In the [Config manager](#), wiki admins can change the settings for this feature. Here, the number of readers to be shown in the flyout can be changed (defaults to 10).
