Signatures

**This information is obsolete.**
The Magic word "signhere" has been replaced with the Content droplet [Signature](#).

The **SignHere** extension allows you to collect [MediaWiki signatures](#) directly in the view mode of a page via a button.

Contents

1 Inserting the tag	3
2 Restrictions	4

Inserting the tag

To insert the tag:

1. **Click** *Insert>Magic word* in the visual editor toolbar.

2. **Select** *signhere* from the list of magic words.

3. **Click** *Done* to close the dialog.
4. **Click** *Insert* in the Signatures dialog.
5. **Save** the page.

Once the page is saved, a *Signatures* area is shown on the page. A user with edit rights on the page can now add their signature with timestamp directly in view mode. This adds the signature to the page content.

Signatures are displayed in the chronological order in which users signed. All signatures are visible to all users visiting the site.

Restrictions

The issue of signature forgery is important to this issue.

Each user's signature is added to the page in clear text, just as it would be done using the built-in MediaWiki signature feature. Although not obvious to users reading the page, any user with editing rights can change, add, or remove these signatures.

The page history offers a certain protection. It will be listed there when users have added a signature via *SignHere*.

Diff selection: Mark the radio boxes of the revisions to compare and hit enter or the button at the bottom.
Legend: (cur) = difference with latest revision, (prev) = difference with preceding revision, m = minor edit.

Compare selected revisions

Change visibility of selected revisions

Select: All, None, Invert

This document was created with BlueSpice

Page 4 of 17

To insert additional functionality in a wiki page, you can use Content droplets. Content droplets include tags that were previously accessed from *Insert > Magic word* in the editor toolbar. They also provide access to some templates that are preconfigured in the wiki, such as message boxes.

Adding a droplet to a page

To add a droplet to a page:

1. **Click** the Content droplets icon in the editor toolbar or type `<<`.
2. **Search** for a droplet name in the search bar of the droplets menu or browse the droplets by category.

3. **Select** a droplet
4. **Click** *Insert*.

Note: Some droplets open an inspector menu which contains another *Insert* button. Be sure to confirm that button as well.

Based on the type of droplet, you can continue with configuring the droplet as needed.

List of droplets

Overview			
Description:	Provides a tag to quickly add a signature to a page		
State:	stable	Dependency:	MediaWiki
Developer:	HalloWelt	License:	GPL-3.0-only
Type:	BlueSpice	Category:	Rich Articles
Edition:	BlueSpice pro, BlueSpice Farm, BlueSpice Cloud	Version:	4.1+
? View user help page			

Features

BlueSpiceSignHere allows you to quickly sign off a wiki page. It enhances and automates the built-in MediaWiki functions that allows users to leave their signature on the page.

SignHere adds the tag `<bs:signhere />` to a wiki page.

Technical Information

This information applies to BlueSpice 4. Technical details for BlueSpice Cloud can differ in some cases.

Requirements

MediaWiki: 1.36.0
BlueSpiceFoundation: 4.1
