The extension *BlueSpiceSocialBlog* is part of *BlueSpiceSocial*, the communications module of BlueSpice. In addition to the type blog, there are other types of so-called social entities, such as *comment*, *discussion topic*, *attachment*, or *microblog*.

## About the blog

---

Basically, a blog is a list of comments, questions, or feedback from different users. The blog is often sorted chronologically. Lively communication can arise when blog entries are further commented, recommended, linked with related articles, or placed on a personal watchlist. The blog is ready to use on the special page *Special:Blog*. This page is linked directly from the main navigation in every new wiki installation. So you can start using the blog right away.

## Characteristics and features

---

- A blog entry consists of a title and content.
- **Comments:** Users can leave comments to each blog entry.
- **Actions:**
  - **Delete:** Editors can delete their own posts. Administrators can delete all posts. Deleted posts are no longer displayed. Exception: Administrators see deleted items with a red background and can restore them.
  - **Recommend:** Blog posts can be recommended. It is possible to generate a list of posts with the most recommendations via the timeline filter. (See: Embedding the blog on a page)
  - **Linked page:** Every blog entry is connected to a wiki page by the system. By default, this is the main page of the wiki. However, other pages can be added as "Linked page". Blog entries can then be filtered for linked pages via the *Special:Timeline* page.
  - **Watch:** Own blog posts and comments are automatically added to the watch list.
- **Permissions:** It is possible to allow users with read permissions on the wiki to comment on blog entries. See: [BlueSpiceSocial Permissions](#).

## Adding the blog to a page

---

It is also possible to include the blog functionality on any wiki page. Social contributions of many types can be consolidated and displayed chronologically in a timeline and filtered and sorted as needed.

If you want to include a view of your blog on another page of your wiki, for example your homepage, you need to insert the necessary codeblock in the source code of your page.

### To include a blog view:

1. **Go to** the page where you want to insert the blog or create a new page.
2. **Open the page** in *Source editing* mode.
3. **Copy the following code block** to the section in your page where you want to show the blog.

```
<bs:timeline>
{
  "showentitylistmenu": true,
  "preloadtitles": {
    "blog": "Template:Blog"
  },
  "preloadedentities": [{
    "type": "blog"
  }],
  "headlinemessagekey": "Community-Blog",
  "showheadline": true,
  "usemorescroll": false,
  "morelink": "Special:Blog",
  "limit": 5,
  "sort": [ {
    "property": "timestampcreated",
    "direction": "DESC"
  } ],
  "lockedfilternames": [
    "type"
  ],
  "filter": [ {
    "type": "list",
    "property": "type",
    "value": [ "blog" ],
    "comparison": "ct"
  } ]
}
</bs:timeline>
```

After saving the page, you will see a list of existing blog entries based on the filter and sorting criteria you provided.

## Blog parameters

---

### Output format

The following table shows the blog elements and the necessary parameters to create the output.

Blog output

Element	Parameters	Parameter and element description	Type	Default value
1 - header	headlinemessagekey	Header text	string	Timeline
	showheadline	Show the header text	boolean	true
	showentitylistmenu	Show or hide the blog menu	boolean	true
	showentityspawner	Show the menu item for creating a blog entry	boolean	true
	availablesorterfields	<div>Determines which data fields are included as sorting options in the sort menu. Example: allow sorting only by date created or by the user who created a blog entry:</div> <div><div>"availablesorterfields": ["timestampcreated", "ownerid"]</div><div><div><div></div><div></div><div></div><div></div></div><div>Sorting</div><div>Creation date</div><div></div><div>Creation date</div></div><div>List of typical sort fields</div></div>	array	all
		Determines which settings for sorting the user cannot		

Element	Parameters	Parameter and element description	Type	Def va
2 - blog menu	lockedoptionnames	change.	array	[]
	availablefilterfields	<p>Determines which data fields are included as filter options in the filter menu. Example: allow filtering based on Creation date and Linked pages:</p> <pre>"availablefilterfields": ["timestampcreated", "tags"]</pre> 	array	all
	lockedfilternames	<p>Determines which settings for filtering the user cannot change.</p> <p>Example: a user cannot change the filter values for <i>Linked pages</i>. The text field is greyed out:</p> <pre>"lockedfilternames": ["tags"]</pre> 	array	[]
	persistsettings	<p>Initial settings and custom sort and filter settings are included in the page url. The url can then be used to create a link to the page with the same filter and sort settings.</p> <pre>"persistsettings": true</pre> <pre>myblog?sort=[{"property":"timestampcreated","direction":"DESC"}]&amp;filter=[{"type":"list","property":"type","value":"I</pre>	boolean	false
		Shows the text field for creating a new blog entry. If it is not set, the text field is not available.		

Element	Parameters	Parameter and element description	Type	Default value
3 - new blog entry	preloadentities	To show the text field: <pre>"preloadedentities": [{"type": "blog"}]</pre>	array of objects	-
4 - existing blog entry	outputtypes	It defines the display format of the blog entry.  Standard types are: <i>List</i> , <i>Short</i> , <i>Default</i> , <i>Page</i> . ( <a href="#">see examples</a> )  Each blog entry is a "social entity".	object	Default
	limit	Defines how many social entities are loaded initially.	object	Default
4a - avatar	-	Shows the avatar of the user who created the blog entry or comment. It is displayed in all output types except <i>List</i> .	-	-
4b - info area	-	Link to the comments and "last edit" info.	-	-
4c - blog entry content	-	Shows the text body of a blog entry. The output type <i>Default</i> collapses the blog entry content after the first paragraph with a "More" link.	-	-
4d - action menu	-	Actions: <i>edit</i> , <i>delete</i> , <i>recommend</i> , <i>Linked page</i> , <i>watch</i> 	-	-
5 - new comment	-	Text field for creating a new comment.	-	-
6 - existing comment	-	Comments include the social tag <i>Recommend</i> .  Each comment is a "social entity".	-	-
7 - "more"	morelink	Link target of the "more" button. For blogs, it makes sense to link to the page <i>Special:Blog</i> .	str	Special:Blog
	useendlessscroll	More blog entries are automatically loaded after the user scrolls to the end of the blog.	boolean	true
		Shows a "more" button below the blog which loads more		

Element	Parameters	Parameter and element description	Type	Default value
button	showentitylistmore	blog entries on click. This is only possible if <i>useendlessscroll</i> is set to <i>false</i> .	boolean	<i>false</i>

## Sorting

Most commonly, a blog shows the latest blog entries first. However, there are many different options for sorting the list of blog entries.

## Syntax

```
[{
  "property": "timestamptouched",
  "direction": "DESC"
}]
```

## Properties

There are some common properties of a blog entry that are useful for sorting:

Property	Description
timestampcreated	creation date
timestamptouched	last edit date
commentcount	number of comments
ratingcount	number of ratings
ownerid	username of the creator of a blog entry
ownerrealname	real name of the user

## Direction

Blog entries can be sorted in descending and ascending order. Descending is the default order.

Property	Description
DESC	sorts the blog entries in descending order

Property	Description
ASC	sorts the blog entries in ascending order

## Filtering

Without setting the filter parameter, there will be no output on the page.

To show the blog entries of your wiki, include the following codeblock like shown in the code example above:

```
"filter": [ {
  "type": "list",
  "property": "type",
  "value": [ "blog" ],
  "comparison": "ct"
}]
```

This filter includes all social entities which match the type *blog*. Since we only want to show social entities of type *blog*, we only include *blog* entries in our filter. If you want to create a social timeline rather than a blog view, you can also add other types of social entities. The following example shows a timeline view that includes blog entries, discussion entries from wiki pages, and user profile information:

```
"filter": [ {
  "type": "list",
  "property": "type",
  "value": [ "blog", "topic", "profile" ],
  "comparison": "ct"
}]
```

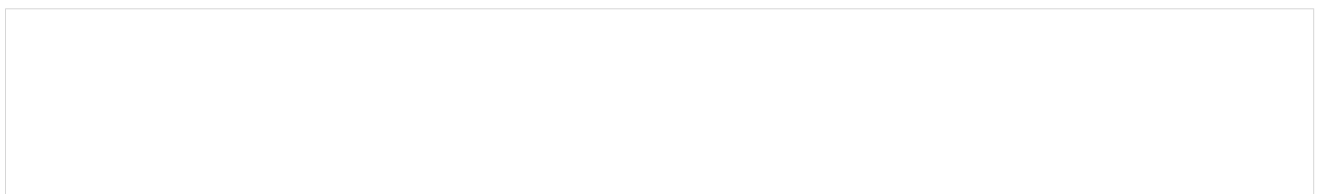

## Output type examples

The output type for a blog is added using the *outputtypes* parameter. Don't forget to include a comma before and after this parameter (unless this is the last parameter in your code):

```
"outputtypes": {
  "blog": "Default"
}
```

## Default

The output type *Default* shows the content of a blog entry truncated after the first paragraph. To view the full text, users can click on the *More* link.

Greg Rundlett über BlueSpice

"Short" output

## Page

The output type *Page* shows all blog elements, including the comments, in an expanded view.

Greg Rundlett über BlueSpice

 Greg Rundlett came to the following conclusion at the EMWCon in Houston:

BlueSpice is really the best option out there - I think globally - for MediaWiki Enterprise, MediaWiki hosting and support. I mean they have put together a real organization. They do a great job of not just assembling the bits and pieces of MediaWiki, and the whole stack; but also Markus Glaser has put together a lot of custom code and extensions to enhance functionality. They have a great system for actually moving content back and forth, using what's called WebDAV technologies, so that you can seamlessly access shared drives as part of your wiki.

Buts that's it. Aside from BlueSpice there really aren't any hosting companies that put together any kind of featureful, current, maintained and customized full stack deployment of MediaWiki."

Except for the fact that there were a few more besides Markus ... I took that gladly to the memory.

By the way, who cares: The video streams of the EMWCon are all online [\(YouToube-Channel\)](#). I also found Victoria Coleman's contribution about the Foundation's perspectives and problems [interesting](#).

 Comment (1) 2 years ago • Richard Heigl

Answer here...

 I like it!

"List" output

## Configuration

In the [Config manager](#), you can change the following settings:

- **Use teaser text for blog entries in the timeline:** When you create a blog entry, you can create a teaser text for it by clicking the cogwheel symbol in the blog entry form. If this setting is active, the teaser text will be shown on the page *Special:Timeline* instead of the first part of the content.

**Title**  
ISO 7010 Symbole

**Content**

Please makes sure to adhere to the ISO 2010 graphics standards<sup>¶</sup> when using symbols in your manuals.  
We still see a lot of outdated images throughout the company and will flag documents as expired if they contain the wrong images.  
For questions, please contact your documentation team. Thank you!

**Teaser**  
Pages in violation of ISO 2010 graphics standards will be expired]

× Main Page

blog teaser text

- **Show entryptoint "Blog"**: Shows a link to the page *Special:Blog* in the main navigation.

With the Config manager, a wiki user with *sysop* rights can manage wiki-wide settings in one place. In the [navigation](#), it is located at *Global navigation > Management > Configuration*. This link loads the page *Special:BluespiceConfigManager*.

## Layout

### Filter options

All settings can be accessed through the following filter options:

- **Feature:** group by type of functionality the setting belongs to (search, administration...)
- **Extension:** group by extension name
- **Package:** group by BlueSpice edition and services (BlueSpice free, BlueSpice pro, Matomo)

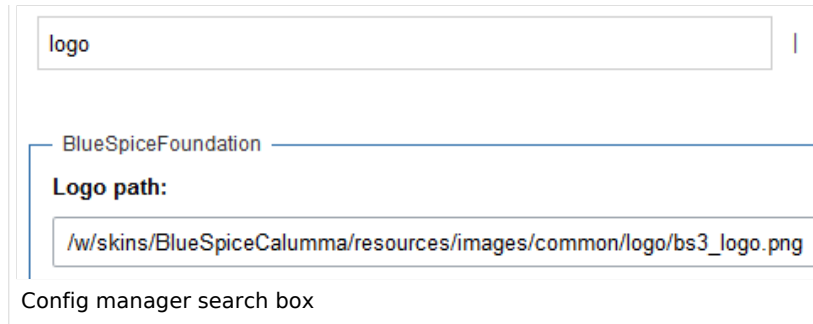

All settings are available in any type of grouping. Changing the grouping type does not add or remove setting options. It just groups them differently. After settings are adjusted, they can be saved by clicking *Save*, or cancelled by clicking *Reset*.

**Note:** If a server administrator has configured a setting to no longer be writable, it will be shown as greyed-out in the config manager. You will have to talk to your server administrator about changing such a setting.

### Searching for settings

A search bar is located above the list of settings. Type in a keyword such as "logo" to find the corresponding setting. The search returns settings regardless of the currently selected group.

**Note:** The search field has to be empty if you want to see the filter menu instead of the search.

## Settings by extension

### EventBus

Eventbus sends notifications to external urls in case something happens in the wiki. For example, if a page is created, an external service could then be started and create a pdf of that page. See the extension's page on [mediawiki.org](https://mediawiki.org).

### EnhancedUpload v4.3+

Sets the defaults for the [advanced image settings](#) when uploading and embedding an image into the wiki via drag-and-drop functionality. The default settings determine the orientation, type, and size of the image. These can be adjusted after embedding via the "Advanced settings" of the image on the page.

Configuration settings for the Enhanced upload

## BlueSpiceFoundation

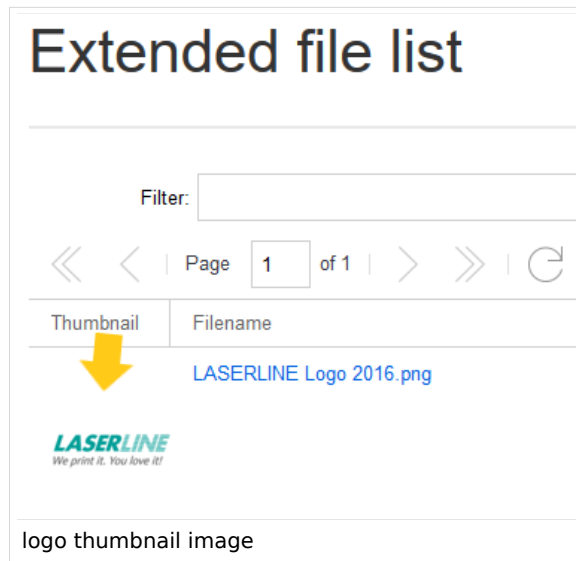

### Updating logo and favicon

**Note:** Since BlueSpice 4.2, the logo and favicon can also be managed via the page [Special:Flexiskin](#) together with further skin customizations.

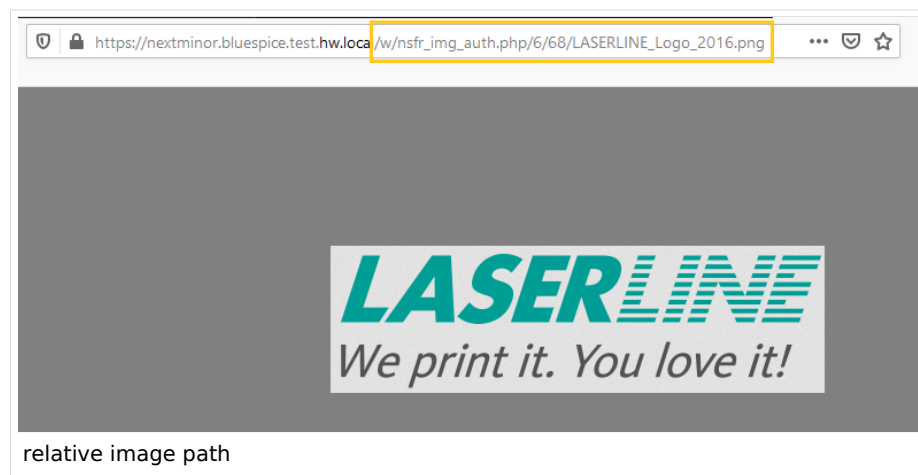

- **Logo path:** The logo image should be stored in the `/images` folder of your installation. If you store it in the `/skins` folder of your BlueSpice installation, it could be overwritten with an upgrade.

**To upload the logo directly in the wiki:**

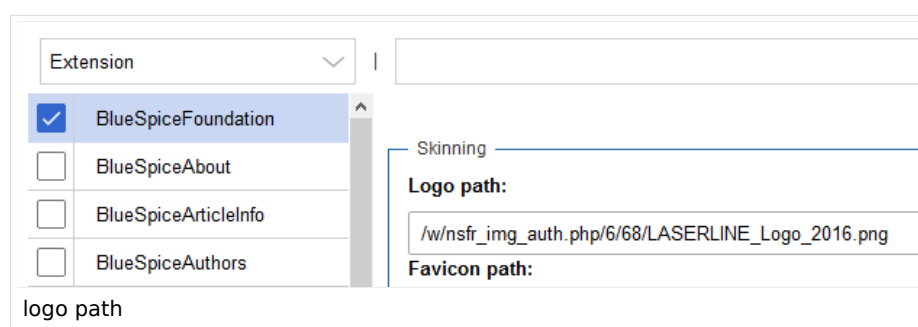

1. **Upload** the logo on the page from the menu *Global actions > File list (Special:ExtendedFilelist)*.
2. **Click** on the thumbnail image of the logo. This opens the logo on a separate page.

3. **Copy** the relative logo path from the address bar. In a typical Wiki configuration, this path starts with */w/....*

4. **Paste** the logo path into the text field for the logo.

5. **Click Save.**

6. **Refresh** the page (Strg+F5).

If the uploaded logo is too large, you can add the following code snippet to the page *MediaWiki:Common.css*. This automatically adjusts the image to the height of the main toolbar:

```
.bs-logo a {background-size: contain;}
```

- **Favicon path:** The favicon image should be stored in the */images* folder of your installation. If you store it in the */skins* folder of your BlueSpice installation, it could be overwritten with an upgrade. [Favicon images](#) have the file extension *.ico*.

## System

- **Allowed file extensions:** For security reasons, the types of files that users can upload are restricted. Here, you can allow additional file formats. If a file format is blacklisted in the server configuration, adding this file extension here will not allow this file type to be uploaded. See [mediawiki.org/wiki/Manual:\\$wgFileExtensions](https://mediawiki.org/wiki/Manual:$wgFileExtensions) for more info.

### XML file type: v4.x++

The *xml* file type is blacklisted since MW 1.39 and has to be allowed in *LocalSettings.php*:

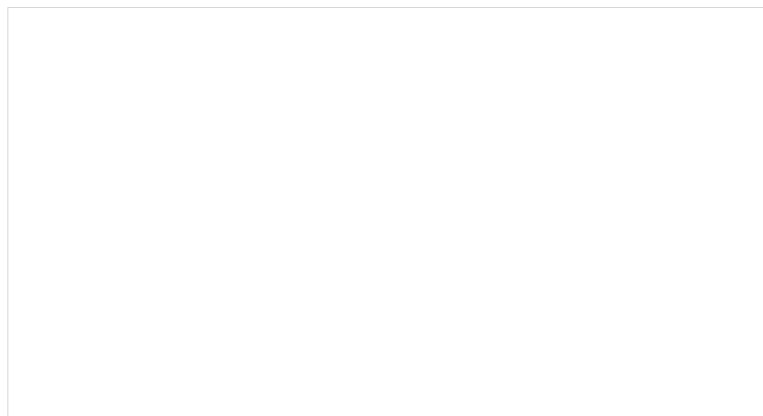

```
$GLOBALS['wgProhibitedFileExtensions'] = array_diff( $GLOBALS['wgProhibitedFileExtensions'] ?? [], [ 'xml' ] );  
$GLOBALS['wgMimeTypeExclusions'] = array_diff( $GLOBALS['wgMimeTypeExclusions'] ?? [], [ 'application/xml', 'text/xml' ] );
```

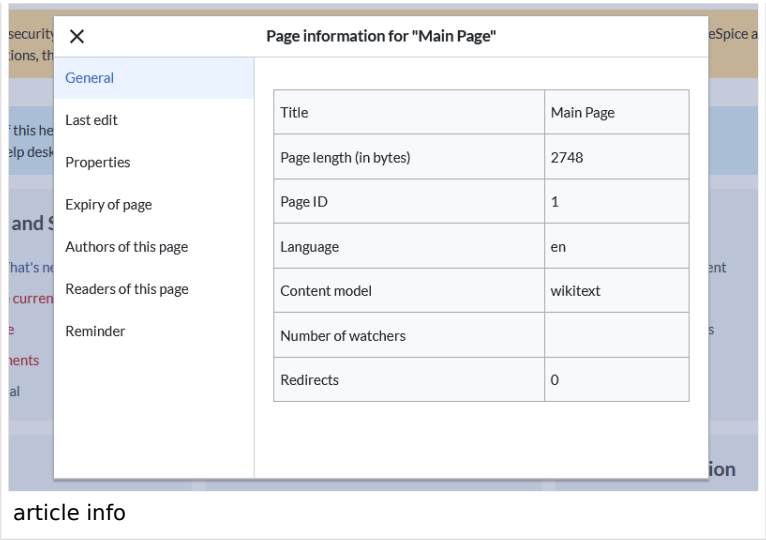

- **Allowed image extensions:** The standard web image types are listed here. In general, you want to restrict image uploads to web images. See [developer.mozilla.org/en-US/docs/Web/Media/Formats/Image\\_types](https://developer.mozilla.org/en-US/docs/Web/Media/Formats/Image_types) for more on browser-supported image types.

## BlueSpiceArticleInfo

*BlueSpiceArticleInfo*, together with *BlueSpiceAuthors*, *BlueSpiceReaders*, and *BlueSpiceExtendedSearch* is part of the *Page information* in the quality management tools.

- **Update interval in seconds:** Sets the refresh rate for the "Last edit" value. By default, this date is updated every 10 seconds via JavaScript.

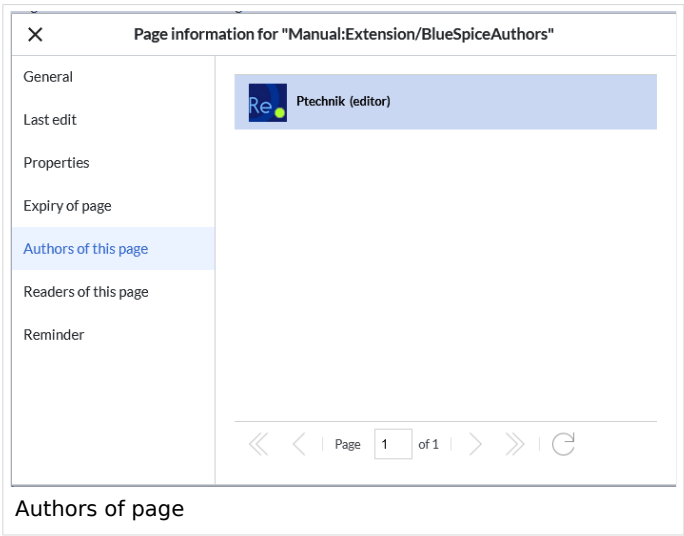

BlueSpiceAuthors

BlueSpiceAuthors, together with BlueSpiceArticleInfo and BlueSpiceReaders, is part of the Page information in the quality management tools.

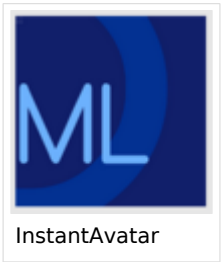

- **Display authors:** Show or hide authors on the page information page.

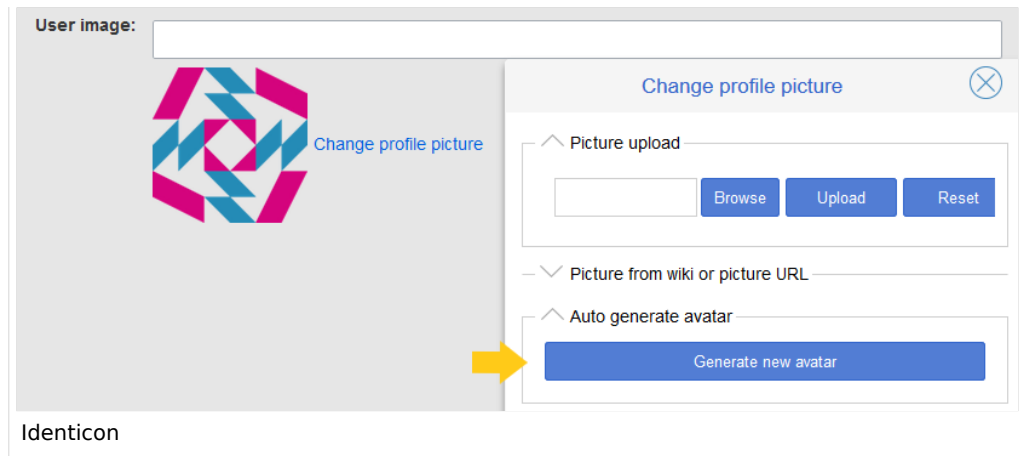

BlueSpiceAvatars

An avatar image is automatically generated if the user does not upload a profile picture or if the user decides to create an avatar image in the preferences.

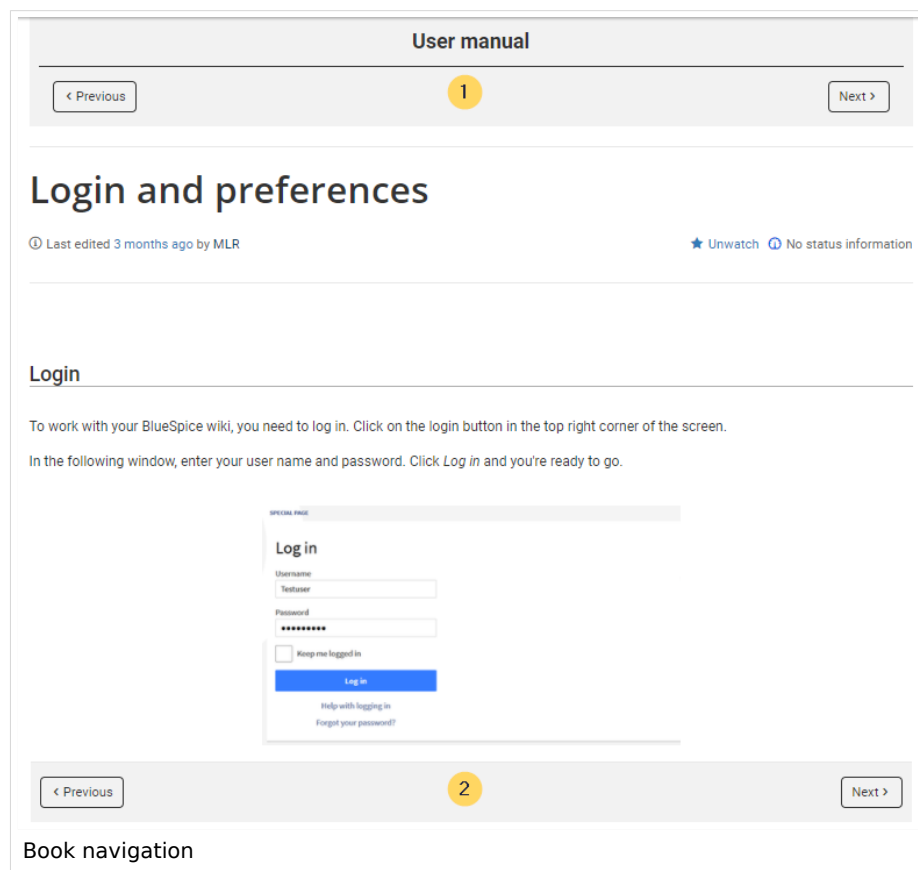

- **Generator**
  - **InstantAvatar:** Generates an avatar image based on using the initials of the Real name or the Username
  - **Identicon:** Generates an avatar image based on parts of the user's IP address.

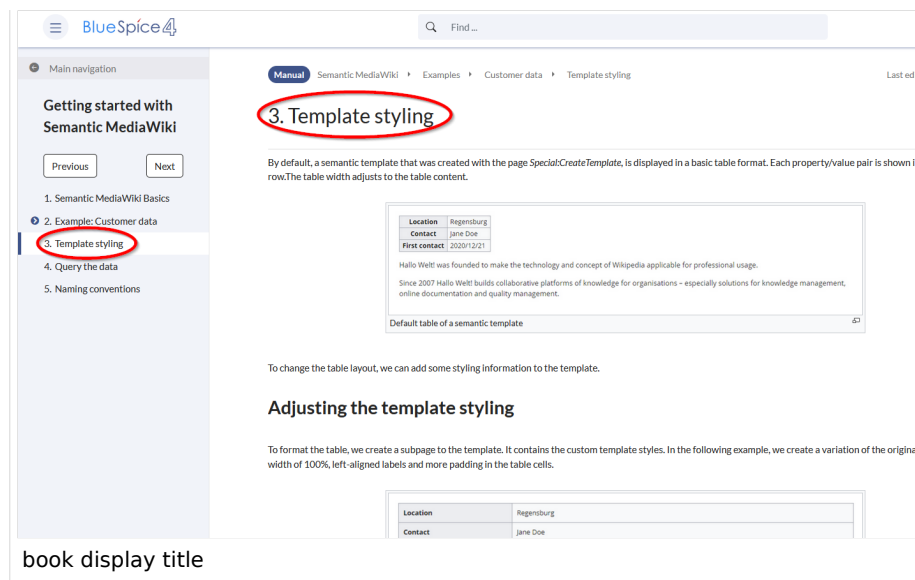

## BlueSpiceBookshelf

- **Show book chapter pager after content:** Displays previous/next book page navigation at the end of each book page. (1)
- **Show book chapter pager before content:** Displays previous/next book page navigation at the beginning of each book page. (2)

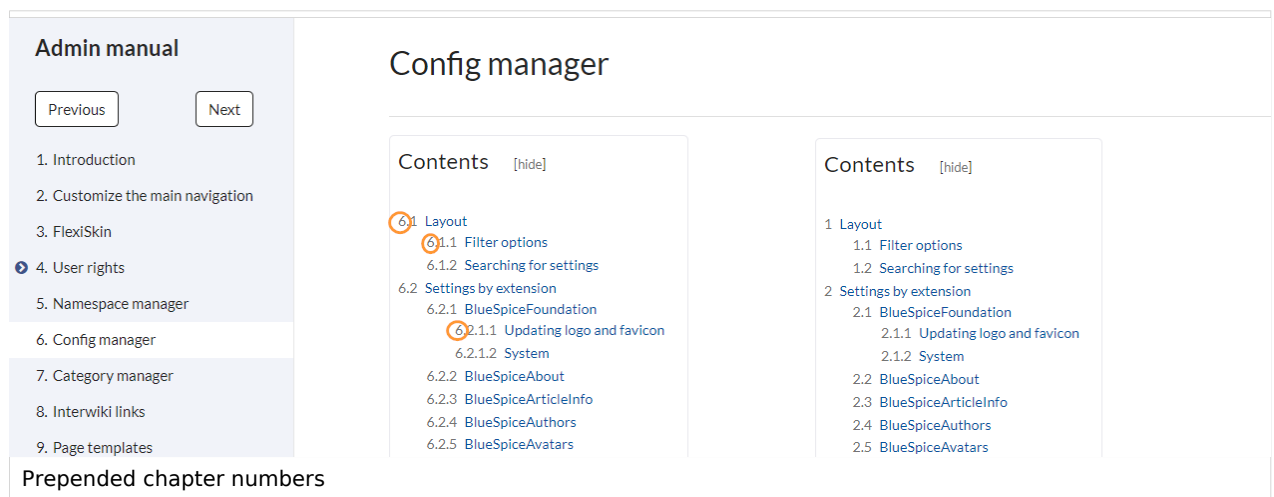

- **Use the display title from book source on article:** Shows the title from the book navigation as page title instead of the page name.

**Note:** If the page additionally contains a `{{DISPLAYTITLE}}` tag, the display title of the page is shown instead of the book title.

- **Prepend article table of contents and headlines with book numeration:** The page TOC does not start with the main heading 1, but with the actual number from the book chapter (see screenshot). If users have activated in their [user preferences](#) to "auto-number headings", the numbering system is matched accordingly.

- **Suppress namespace prefix of book articles in output:** The namespace prefix of an article is not shown in PDFs.

## BlueSpiceChecklist

- **Mark checklist changes as minor edit:** If this setting is active, changes to a checklist (for example, checking a checkbox) in view mode are logged as minor edits. If this setting is inactive, a change to the checklist is recorded as a regular version in the page history.

VisualEditor configuration

+ Create page "Configu"

Search full text

Salesautocomplete

- **Automatically set language filter:** The search only returns pages whose language (PageLanguage) is identical to the user language (Language). Users can set their language in their [preferences](#). By default, the language of content pages is the same as the installation language (ContentLanguage) of the wiki. Some extensions can set the language of individual pages independently of the content language of the wiki.. (See: [https://www.mediawiki.org/wiki/Manual:Language#Page\\_content\\_language](https://www.mediawiki.org/wiki/Manual:Language#Page_content_language)). In many wikis, activating this filter has little effect.
- **Exclude patterns:** Files at external file locations can be excluded from search based on regular expression patterns.

## BlueSpiceExtendedStatistics

- **Exclude these users:** Some user groups, like WikiSysop can skew the statistics, for example the statistics for search queries or because they complete automated maintenance tasks. These types of user groups can be excluded from the statistical results.
- **Maximum number of interval steps:** Sets the size of the x-axis for the results. For a few days, select the interval *Day* or *Calendar Week*, for periods over one year, select *Year* or *Month*. If you do not get any results for your query, try to adjust the interval accordingly.

## BlueSpiceInsertCategory

- Insert category with its parent categories
- Preset categories of a page in the upload dialog

## BlueSpiceInsertLink

- **Allow unmapped links:** if there is no prefix in the map, the link will still be inserted. Example: S:\HR. If this setting is unchecked, the link will not be inserted.
- **Allowed locations for external files:**

Example file	Filesystem prefix	Web accessible Prefix	Link output
S:\Sales\Info\glossaryy.pdf	S:\	file:///S:/	file:///S:/Sales/Info/glossary.pdf
		https://sharepoint/Sales/documents/	https://sharepoint/Sales/documents/Sales/Info/glossary.pdf
		https://intranet/showdocs inline.aspx?path=	https://intranet/showdocsinline.aspx? path=/Sales/Info/glossary.pdf
/var/www/bluespice/w /mounted_			

Example file	Filesystem prefix	Web accessible Prefix	Link output
share/Sales/Info/glossary.pdf	/var/www /bluespice/w/ mounted_share/		https://wiki.company.local/w/mounted_ share/Sales/Info/glossary.pdf

When a new entry is added, it has to be confirmed by clicking the checkmark next to it before saving the page.

InsertLink configuration options

## BlueSpicePageTemplates

- Force target namespace:** The page is always created in the target namespace that is associated with the template, even if the user provided a different namespace prefix. In the screenshot below, the user wants to create the page "NewPage" and then selects a template for the QM namespace. The page is, therefore, created as "QM:NewPage" if this setting is activated.

force the namespace of the template

- Hide default templates:** Hides the default *Empty page* template.

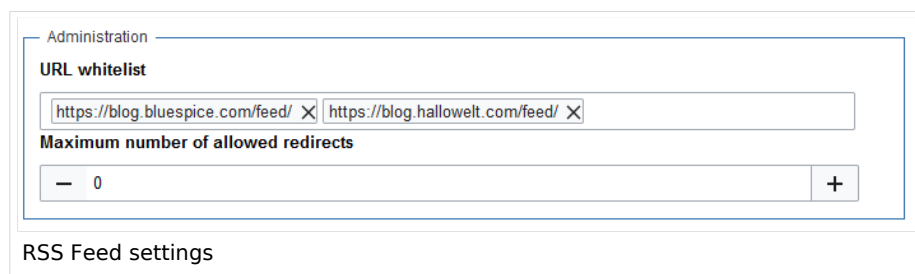

- **Hide template if the page is not to be created in the target namespace:** Depending on the namespace prefix of the page to be created, templates that are associated with other namespaces will not be shown to the user for selection.

## BlueSpicePermissionManager

- **Backup limit:** Sets the number of backups for the permissions manager. Each time the page *Special:PermissionManager* is saved, a backup is created. If the backup limit is set to 5, the last five versions of the permissions configuration are saved as backups.

## BlueSpiceRSSFeeder

- **URL whitelist:** RSS feeds need to be whitelisted here by an administrator before they can be displayed in a wiki page.
- **Maximum number of allowed redirects:** If there are URL redirects for any of the whitelisted URLs, the number of redirects needs to be adjusted (usually to 1 or 2).

Administration

URL whitelist

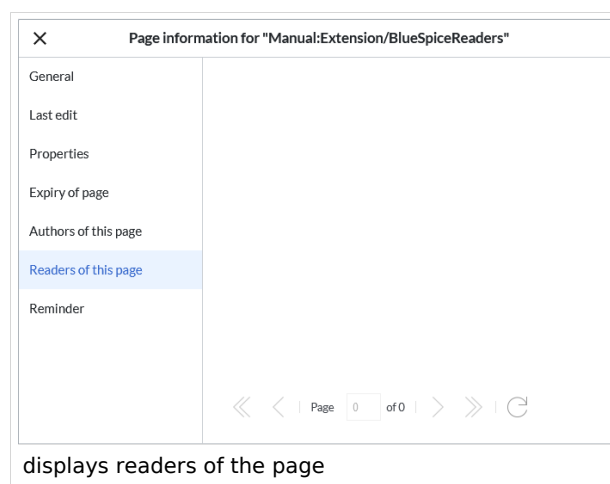

Maximum number of allowed redirects

+

RSS Feed settings

## BlueSpiceReaders

- **Number of readers to display:** Sets the number of readers that are displayed on the Page information in the Quality management tools.

## BlueSpiceUEModuleHTML

- **Hide namespace prefix in HTML:** If activated, the namespace is shown in the HTML main heading.

**Note:** If the page contains a "displaytitle" tag in the page source, the page display title is shown and this setting has no effect.

## BlueSpiceUEModulePDF

- **Hide namespace prefix in PDF:** If activated, the namespace is shown in the PDF main heading for a page.

**Note:** If the page contains a "displaytitle" tag in the page source, the page display title is shown and this setting has no effect.

## BlueSpiceUniversalExport

- **Metadata (standard, JSON):** Additional data to be passed to the rendering template in JSON format. This data can be used in the export template. The template itself is maintained server-side.
- **Metadata (override, JSON):** Allows overriding standard data sent to the rendering template in JSON format. Values that are set by default can be overridden with this option.

## BlueSpiceVisualEditorConnector

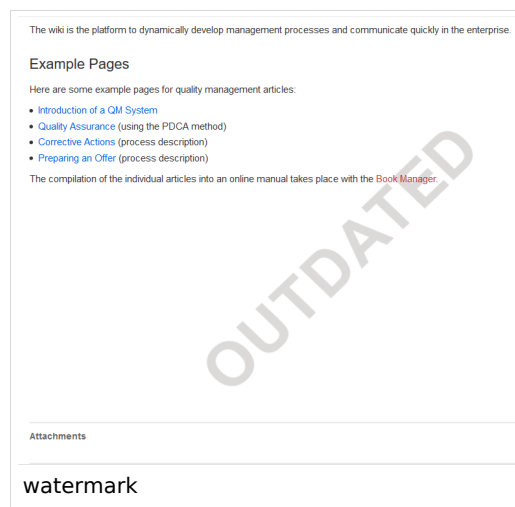

- **Enable VisualEditor for BlueSpice extensions**
- **Configuration variable to use a simplified save process**
- **Upload type**
  - Original (Here a confirmation of the rights of use/upload is obtained, file name and namespace of the file can be changed, a category can be assigned and a description of the file **MUST** be given).
  - Simple (No confirmation of required rights is obtained here, the name and namespace of the file can be changed, a description and a category can be assigned, but does not have to be specified)
  - One click (No confirmation about required rights is obtained here, the image cannot be renamed and no category can be assigned. Only the namespace can, but does not have to be adjusted before uploading)

## BlueSpiceWholsOnline

- **Time in seconds until a user is marked as offline:** The system checks every  $x$  seconds if a user logged out and no longer displayed as online. This can be less frequent than the update interval for newly logged-in users.
- **Update interval in seconds:** The system checks every  $x$  seconds for users.

## BlueSpiceExpiry

- **Show watermark for expired pages in PDF:** Shows the watermark for expired pages in PDFs.
- **Show watermark for expired pages in print version:** Shows the watermark for expired pages when a page is printed.
- **Show watermark for expired pages:** Shows a watermark on the page itself.

## BlueSpiceFlaggedRevsConnector

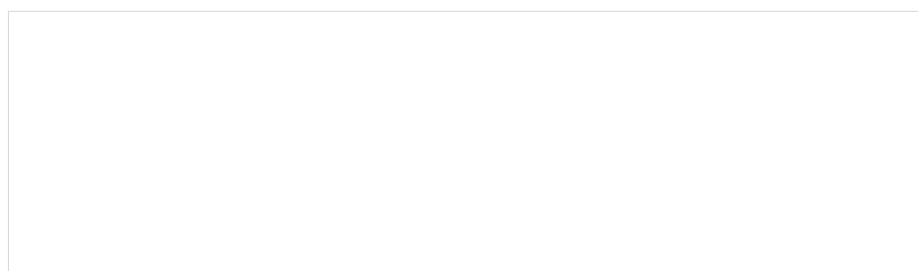

BlueSpiceFlaggedRevsConnector is available up to BlueSpice 4.2.

## Export

The export settings affect how the pages of a book are generated in the PDF export.

- **Bookshelf: List approved revisions log:** Shows a log of stable page versions of pages in the PDF and when these pages were put into accepted status. If editors did not provide a comment when accepting the page, the *Stable comment* field for a revision is empty.

Stable date	Page	Stable comment
18.11.2019	Permission matrix	
18.11.2019	Permission matrix	
15.11.2019	Wiki pages model	
14.11.2019	Permission manager	
14.11.2019	Group manager	

accepted revisions log

- **Bookshelf: List pages without stable revision:** Displays a list of PDF pages at the beginning of the PDF that only exist as a first draft and have no released version.

<p><b>Not stable pages</b></p> <hr/> <p><b>QM:Checklists</b></p> <hr/> <p>Pages without acceptance feature</p>
--

- **Bookshelf: List pages without FlaggedRevs:** Displays a list of PDF pages that do not have a release mechanism at the beginning of the PDF.

<p><b>Not FlaggedRevs namespace</b></p> <hr/> <p>Introduction</p> <p>Wiki pages model</p> <p>User rights</p> <p>Group manager</p> <hr/> <p>Pages with no FlaggedRevs feature.</p>
---

- **UEModulePDF: Show FlaggedRevs info below main heading:** Prints the latest revision dates (last acceptance and last edit date) below the heading.

<p><b>Introduction</b></p> <hr/> <p><i>Stable: 06.12.2019 - 12:00 / Revision: 06.12.2019 - 11:43</i></p> <hr/> <p>FlaggedRevs info below heading</p>
--

## Quality assurance

- **Include handling:** If resources are embedded in a page and those resources are located in namespaces with approval mechanism, then the following settings can be selected. For example: If an approved page contains a template or a file that has been changed after the page itself has been approved, the page will not get another draft version, but instead one of two configurations applies:
  - Current versions: Always show the latest version of the embedded resource.
  - Stable versions: Always show the stable (=approved) version of a resource.
- **Show unstable pages for following groups:** If the group *user* is removed from the *BlueSpiceFlaggedRevs* configuration, users in this group will not be able to see draft versions when they are added as reviewers in a review process. When the group *user* is removed, only *sysop* and *reviewer* users can access drafts. If you want other groups, for example *editor*, to see draft versions, you need to add them to the configuration. If no user groups are specified in the configuration field, not even reviewers and sysops users will see a visual status indication of a page. They will have access to drafts through the revision history for the page instead.

## Searching and Navigation

- **Indexing only stable versions:** Draft versions are excluded from the search results. If a page does not have a stable version, it is not shown as a search result.

## BlueSpiceSocial

- **Show endpoint "Timeline":** Shows a link to the page *Special:Timeline* in the main navigation.

## BlueSpiceSocialBlog

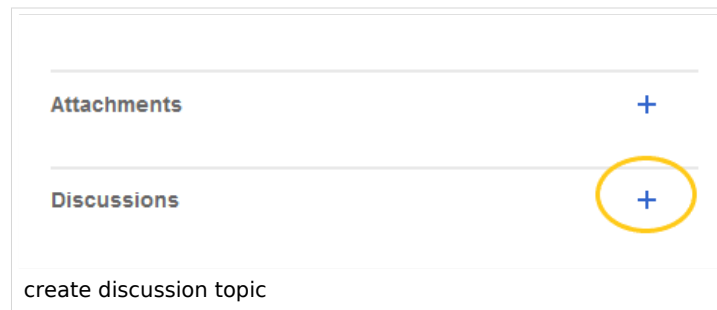

- **Use teaser text for blog entries in the timeline:** When you create a blog entry, you can create a teaser text for it by clicking the cogwheel symbol in the blog entry form. If this setting is active, the teaser text will be shown on the page *Special:Timeline* instead of the first part of the content.

The screenshot shows a form for creating a blog entry. The form has a title field with the text "ISO 7010 Symbole". Below the title is a content field with a rich text editor. The content field contains a message about ISO 7010 graphics standards. Below the content field is a "Teaser" field, which is highlighted with a red circle. The "Teaser" field contains the text "Pages in violation of ISO 2010 graphics standards will be expired". Below the "Teaser" field is a "Main Page" button. At the bottom right of the form is a gear icon (cogwheel) highlighted with a red circle, next to "Cancel" and "Post" buttons. Below the form, the text "blog teaser text" is written.

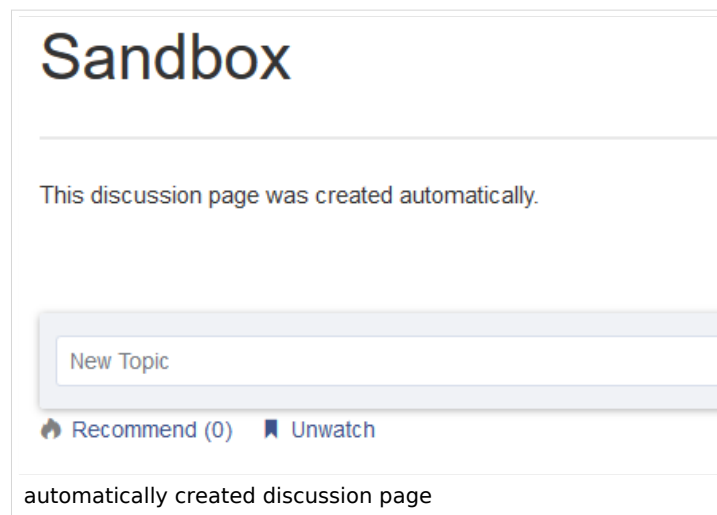

- **Show endpoint "Blog":** Shows a link to the page *Special:Blog* in the main navigation.

## BlueSpiceSocialTopics

- **Automatically create all discussion pages.** If a user creates the first discussion topic for a page using the link in the page footer of a wiki page, the needed discussion page is automatically created first.

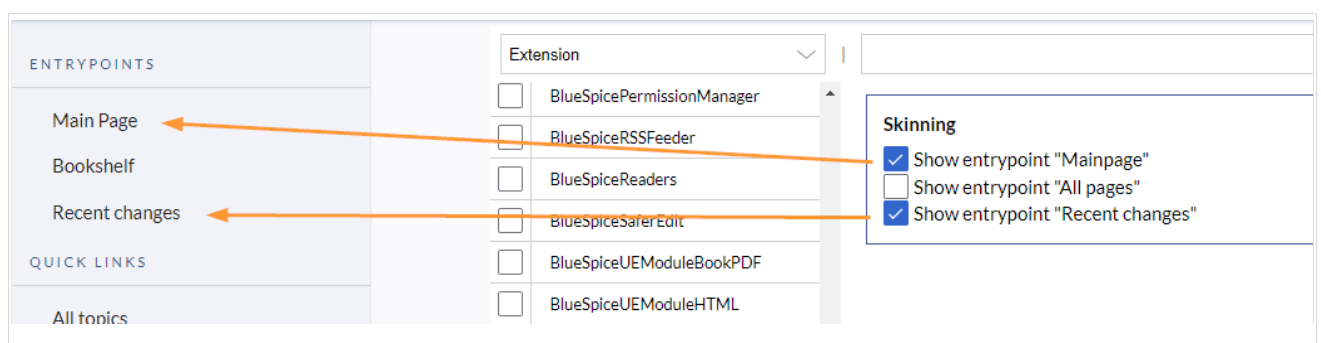

A message "This discussion page was created automatically" is inserted on the discussion page.

If this setting is deactivated, the user is directed to the "Create page" default page first.

## Content Stabilization v4.3+

The following configuration options are available for page approvals:

- **Include handling (1):** Wenn Ressourcen in eine Seite eingebettet sind **und sich diese Ressourcen in Namensräumen mit Freigabe befinden**, können die folgenden Einstellungen ausgewählt werden. Es gibt zwei mögliche Einstellungen:

	Verhalten
Stable versions of included pages	Shows the approved (stable) version of a resource, even if it was approved after the page that includes the resource was approved. (This works only if the resource is located in a namespace with active approval feature).
Versions that were current at the time of approval	Shows the version of the resource which was embedded at the time of the last approval of the wiki page where it is embedded. (This works only if the resource is located in a namespace with active approval feature).

For example, if an approved page contains a template that was modified after the page itself was approved, the page will not show a draft version. Approvals work directly via the embedded resource.

- **Allow viewing of first draft version (2):** If this setting is activated, then all users with read rights can view the first draft. When disabled, only groups from the "Show unstable pages for following groups" setting can see first drafts.
- **Update semantic properties from stable pages only (3):** The property value of the page is read from the stable version of the page and not from the draft version.
- **Entwurfseiten für folgende Gruppen anzeigen (4):** If the group `user` has been removed from the configuration, users in this group will not be able to see draft versions when they are added as reviewers in a review process. In this case, only users with the roles `sysop` and `reviewer` can access drafts unless other groups are specified. These system groups can only access drafts through the site's version history.

## Social Wiki

**BlueSpiceSocial** is a set of extensions that add social features around a wiki page. It allows users to quickly communicate on the wiki and to express their opinion on pages.

### Contents

1 Scope .....	34
2 User profile .....	34
3 Discussions .....	35
4 Timeline .....	35
4.1 Creating new entries .....	35
4.2 Interacting with social entities .....	35
5 Blog .....	36
6 Permissions .....	36
7 Deactivating the comments feature .....	36
8 Related info .....	37

## Scope

BlueSpice Social contains the following functionality:

- **User profile:** Provides the page *User:<username>*.
- **Attachments:** Connects uploaded files to wiki pages.
- **Discussions:** Enables discussions with comments created on wiki pages. Discussion entries can be marked as "closed".
- **Activities:** Automatically creates pages in the *SocialEntity* namespace to track page edits and creations.
- **Blog:** Provides the special page *Special:Blog*. A blog view can also be embedded into individual wiki pages.
- **Microblog:** Similar to blog entries, but without a headline.
- **Timeline:** A chronological list of all social entities. The timeline filter can be used for displaying social entities on wiki pages.

## User profile

Every user has a profile that is displayed on the page *User:<username>*. Users can access their user profile by clicking on *Profile* in the user menu (located in the [header bar](#)).

The user profile shows the user's basic information (depending on the wiki setup) and the user's profile image.

Below the user info, the user's wiki activities are listed: Comments the user made, actions on pages, and in general the user's activity on the wiki. It also allows other users to leave comments on the user's profile page.

The screenshot displays a user profile for Sarah Naumann. At the top, there is a profile picture of a smiling woman. To the right of the picture, a table lists her details: Name (Sarah Naumann), Department (IT), Function (Senior Operations Engineer), Location (Ulm), and Telephone (+49 73 4860-94). An 'Edit' link is visible in the top right corner of this section. Below the profile information, there are four circular icons: a list, a funnel, a plus sign, and a refresh symbol. The main content area shows a comment by Greg Rundlett about BlueSpice, followed by a comment by Sarah Naumann. Sarah's comment includes a smaller version of her profile information table. At the bottom, another comment by Sarah Naumann is partially visible.

Name	Sarah Naumann
Department	IT
Function	Senior Operations Engineer

Die Pulvermenge steigt doch nicht linear mit der Wassermenge. Siehe zum Beispiel den

## Discussions

BlueSpiceSocial integrates a discussion section at the bottom of every wiki page. This section allows users to create comments directly on a wiki page. If it is the first entry in a discussion, the discussion page is automatically created at this time if this is configured in the [Configuration manager](#).

The discussion section can be disabled on the page-level by adding the [MagicWord](#) `__NODISCUSSION__` to the page in source editing mode.

## Timeline

The screenshot shows a 'Timeline' section with three entries. Each entry includes a user profile picture, a title, a comment text, and a 'Recommend' button with a flame icon and a count in parentheses. The first entry is by Horst Schreiber, the second by Greg Rundlett, and the third by Maik Kalb. The timeline is titled 'Timeline' at the bottom.

Horst Schreiber commented "Greg Rundlett über BlueSpice"

Danke für den Hinweis! Eine Übersetzung wäre noch schön gewesen. Ich glaube auch nicht, dass jeder Leser schon versteht, was WebDAV bringt. Vielleicht kann man das noch etwas ausführlicher erklären?

Naja. 6g Kaffee pro Tasse sagt die Anleitung. Und linear mit den Tassen steigt dann schon die Pulvermenge. Übrigens: Wer den letzten Kaffee rauspresst, sollte gleich neuen kochen.

Timeline

Timeline is a special page that provides an overview of all social conversations on the wiki.

By default, it is listed on the *Main navigation*. You can also access the page directly at [Special: Timeline](#). On this page, users can sort and filter existing social entries or create new entries.

## Creating new entries

To create a new entry, click on the "Plus" icon to add a new timeline entry:

- **Blog entry:** [Blog](#) is used for topics to be shared with other users on the wiki
- **Microblog:** Like a blog entry, but without titles. It should be used for a short entry, e.g., a quick announcement.
- **Discussion topic:** Adds a discussion entry to a particular wiki page.

## Interacting with social entities

Every entry in the timeline is called a social entity. Depending on the type of social entity, the following interaction options exist:

- **Comments:** Number of comments related to the entity. Clicking on *Comments* opens all current comments and allows users to add a comment (if user has the necessary permissions).

- **Recommend:** Number of users that recommended the entity. Users can add a recommendation by clicking on *Recommend*.
- **Linked articles:** Number of articles linked to this entity. Clicking on *Linked articles* shows the list of linked articles.
- **Watch/Unwatched:** Shows if the user is currently watching the entity (the receives notifications when the entity is changed). Clicking on Watch or Unwatch changes the state of watching.
- **Resolved/Unresolved:** The status of the entity. Some entities, like discussions on a question can have a status attached to them, so that other users know if the question is answered.

## Blog

---

**Blog** is a special page showing an overview of all blog entities available on the wiki. By default, it is listed on the *Main navigation*. You can also access the page directly at `Special:Blog`. Users can sort and filter the list entries by clicking on the icons above the list.

Learn how to [include the blog on any wiki page](#).

## Permissions

---

From BlueSpice version 3.2.7 the following roles have associated "social" permissions. Earlier versions have no option to limit the creation and editing of blog entries by using the role *commenter*.

Rechte/Rolle	commenter	editor	admin	maintenance-admin	Berechtigung
Create and edit blog entry		x	x	x	social-blog
Comment on blog entry	x	x	x	x	social-blog-comment
Create and edit microblog entry	x	x	x	x	social-microblog
Comment on microblog entry	x	x	x	x	social-microblog-comment
Create discussion entry	x	x	x	x	social-topics
Comment on discussion entry	x	x	x	x	social-topics-comment
Create and edit attachments	x	x	x	x	social-stash

The comments function for blog, microblog and discussion entries can be deactivated in the LocalSettings-file on the server.

## Deactivating the comments feature

---

The comment function for comments on blog, microblog and discussion entries can be deactivated in the LocalSettings file on the server.

```
$bsgSocialCanHaveChildrenBlacklist = [  
    'blog', // disable comments on blog  
    'topic', // diable comments on discussion topics  
    'microblog' // disable comments on microblogs  
];
```

Attachments

The extension **SocialWikiPage** allows users to attach a file directly to a wiki page.

Contents

<a href="#">1 Characteristics of file attachments</a>	39
<a href="#">2 Attaching a file</a>	39
<a href="#">3 Deleting an attachment</a>	40

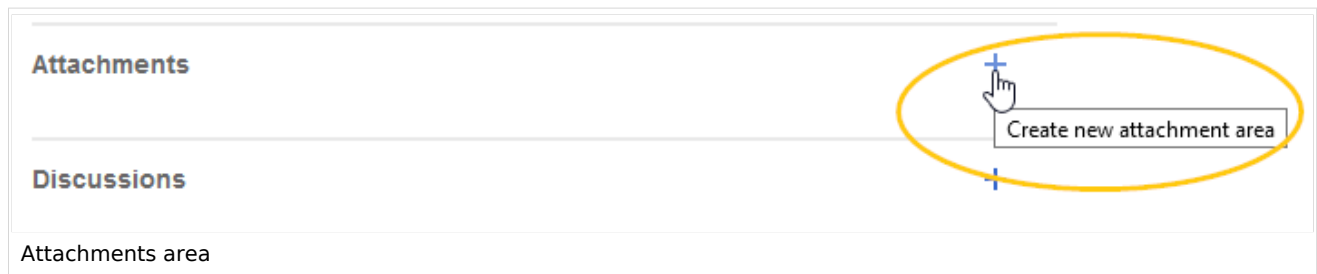

4	Grouped attachments	41
5	Styling	41
6	Related info	42

## Characteristics of file attachments

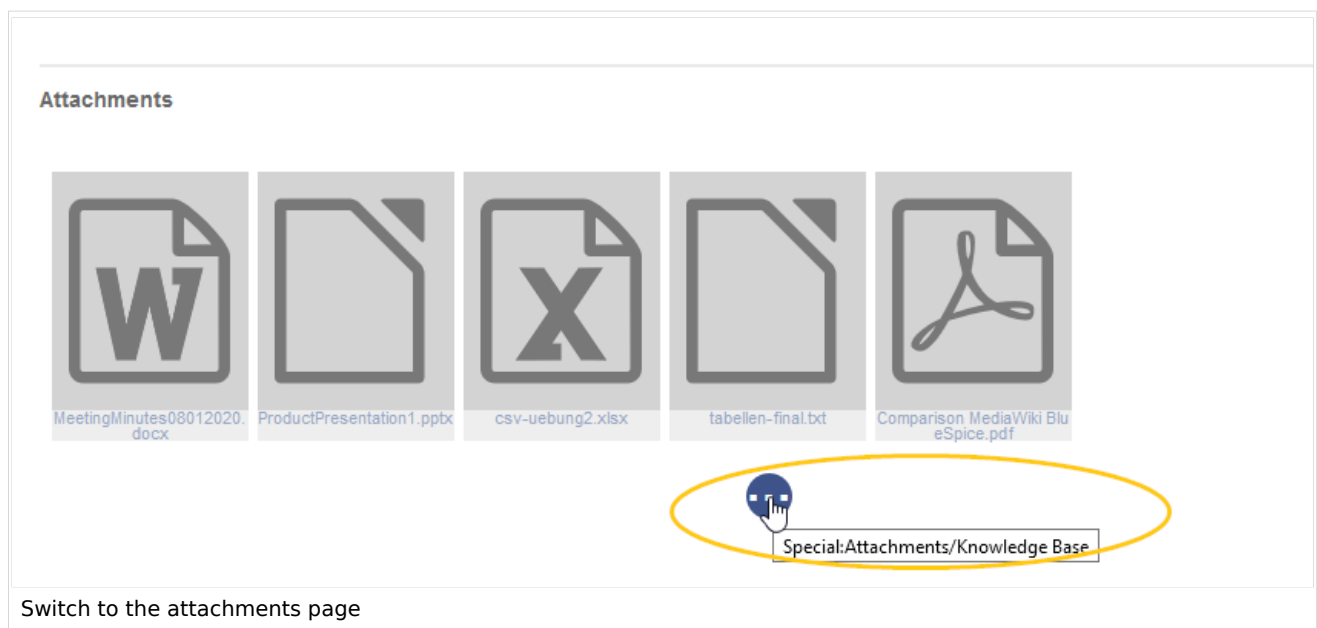

- The attachment process simply creates an association between a file in your wiki and the page to which it is attached.
- File attachments don't show up in the **version history** of a page.
- Clicking on an attachment, for example a PDF file, opens the file directly (if possible). If the file type is docx or xlsx, the file is downloaded since it cannot be opened in the browser.
- Administrators can still see attachments that have been deleted from a page. These attachments are marked with a red background and can be reactivated if needed.
- The **Timeline** can list all attachments in the wiki.

## Attaching a file

To create the first attachment at the bottom of a wiki page, open the attachments area by clicking on the "plus" button.

If the attachments area already exists, click the "more"-button to switch to the attachments page.

On the attachments page you can add a new attachment:

- (1) **Add existing file:** Click the plus button to add a file that has already been uploaded to the wiki.
- (2) **Upload a new attachment:** Click the upload area or drag the file into the upload field to upload a new attachment to the wiki.

[illegible]

## Deleting an attachment

To delete an attachment, go to the attachments page and click on the Delete button in the actions menu of the attachment. Deleting an attachment on a page does not delete the file itself from the wiki.

Delete attachment

## Grouped attachments

Clicking the Edit button in the actions menu of an attachment allows you to group more attachments with it. When you group attachments, they are:

- displayed together on the page
- considered one entity for commenting, recommending, linking, and watching (as social entity)

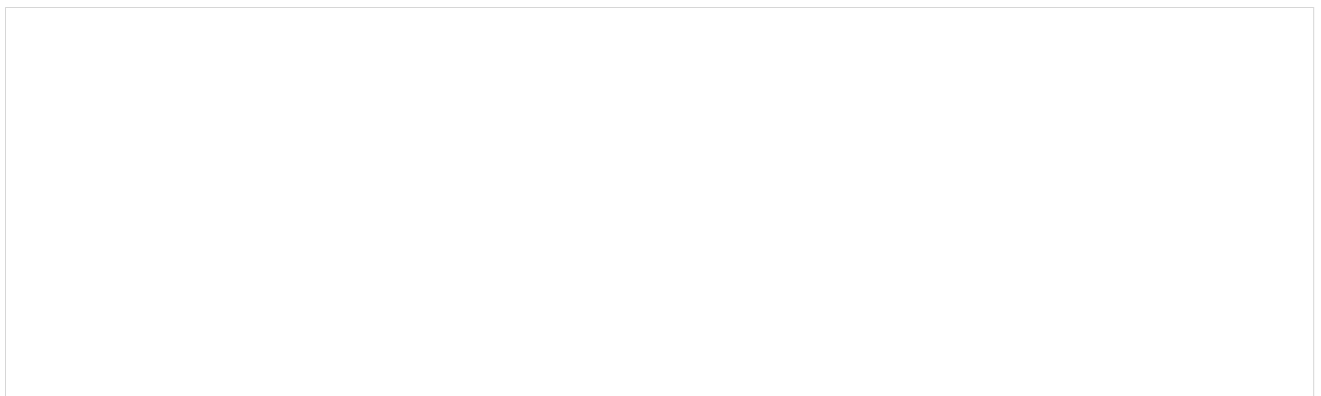

## Styling

By default, the icons for the attachments are shown in grey with a small label and a large icon. By updating the file *MediaWiki:Common.css*, the styles for the attachments can be adjusted as needed. This requires administrator rights.

Add the following styles:

```
/* Attachments */
.bs-social-entity-attachment-wrapper {background: transparent;}
.bs-social-entity-content-attachments div.bs-social-entity-attachment-file a span::before {line-height: inherit;font-size: 80px; color: #695f5c;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-unknown a span::before {font-family:fontawesome; content:"\f016"; color: #695f5c;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-pdf a span::before {font-family:fontawesome; content:"\f1c1"; color: #e12025;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-excel a span::before {font-family:fontawesome; content:"\f1c3"; color:#1d8f50;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-pptx a span::before {font-family:fontawesome; content:"\f1c4"; color:#d04727;}
.bs-social-entity-content-attachments div.bs-social-entityattachment-word a span::before {font-family:fontawesome; content:"\f1c2"; color:#1565c0;}
.bs-social-entity-attachment-wrapper p.attachment-name, .bs-social-entity-content-attachments div a p, .bs-social-entity-content-attachments div span p {font-size:100% !important; word-break:break-word;}
.bs-social-entity-content-attachments div, .bs-social-entity-content-attachments div a, .bs-social-entity-content-attachments div span {color: #444 !important; background-color: #ffffff;}
.bs-social-entity-attachment-wrapper img { border: 5px solid #766d6b;}
.bs-social-entity-content-attachments div a img, .bs-social-entity-content-attachments div span img {height: 80px; width: 75px;margin-top: 16px;margin-bottom: 18px; border-radius: 5px;}
.bs-social-entity-content-attachments div a p, .bs-social-entity-content-attachments div span p { height:4em}
```

<b>Developer:</b>	HalloWelt	<b>License:</b>	<a href="#">GPL-3.0-only</a>
<b>Type:</b>	BlueSpice	<b>Category:</b>	Administration
<b>Edition:</b>	BlueSpice pro, BlueSpice Farm, BlueSpice Cloud	<b>Version:</b>	4.1+
<a href="#">? View user help page</a>			

## Features

**BlueSpiceSocial** is a group of extensions that add social media features to the wiki. This allows users to quickly communicate on the wiki and to express their opinions on pages more easily.

**Warning!** Pages in the namespaces *SocialEntity* and *User* are indexed by search engines by default until prior to version 3.1.13. If you run a public wiki with an earlier version, you should [exclude these namespaces from being searchable](#) unless you want these pages to be indexed by public search engines.

BlueSpiceSocial provides the architecture for all *Social* extensions. It contains base classes, SourceTitle namespace, SocialEntity ContentModel, notifications, etc.

This extension is required by all *Social* extensions. Without another *Social* extension (e.g., BlueSpiceSocialBlog), this extension has no effect.

The following *Social* extensions are available:

- [SocialBlog](#)
- [SocialComments](#)
- [SocialMicroBlog](#)
- [SocialProfile](#)
- [SocialRating](#)
- [SocialResolve](#)
- [SocialTags](#)
- [SocialTimelineUpdate](#)
- [SocialTopics](#)
- [SocialWatch](#)
- [SocialWikiPage](#)

## Features

**BlueSpiceSocialBlog** provides the SocialEntity type *blog*.

**Warning!** Pages in the namespaces *SocialEntity* and *User* are indexed by search engines by default until version 3.1.13. If you run a public wiki with an earlier version, you should [exclude these namespaces from being searchable](#) unless you want these pages to be indexed by public search engines.

The extension BlueSpiceSocialBlog is the basis for the *Special:Blog* page. In every new wiki installation, this page is linked directly from the main navigation. Customized blog views can be added to a wiki page using the `<bs: timeline />` tag.
