# **DeepL integration**

It is possible to define a source wiki in a wiki farm or in several wiki instances, which allows automatic translations by a translation service (DeepL). This DeepL integration can then be used to automatically translate wiki pages from this source wiki into different target wikis. The DeepL integration is configured by Hallo Welt! and is not included as a standard feature.

	Cancel Translate page Translate Select the language to translate the page to Italiano Français
Translation link on the source page	Selection of the target wiki
Intend     Touring page       Transfer target	Translate to another language Translate page Done
