# Edit

BlueSpice uses a slightly customized version of the MediaWiki extension VisualEditor as editing tool. This editor supports all common edit tasks that are useful in a wiki environment. You can refer to the official documentation for basic help. Here in the BlueSpice Helpdesk, we only give some hints and tips for using the editor.

## What is the visual editor?

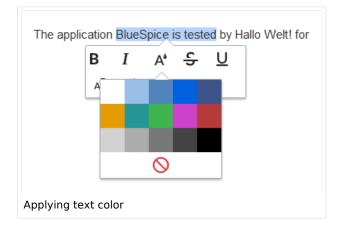

🔸 🥕 Paragraph	~ <u>A</u> ~ లు <sup>Cite</sup> ~	i≡∽ Insert∽ Ω	? A $\equiv$ $\checkmark$ $\bigcirc$ Save changes
1	2 3	4	5
VisualEditor			

The visual editor is optimized for editing wiki pages. Important characteristics and functions are:

- 1. **Page structuring** with headings.
- 2. Consistent **text formatting**.
- 3. Linking of contents.
- 4. Inserting special content (files/media, tables, templates, magic words)
- 5. Adjusting **page options**.

#### Text editing

Typical text formatting options such as **bold**, *italics*, or text color are available as a context menu. When you highlight text, a menu with common formatting elements appears. For example, you can apply a different text color.

#### Pasting content from your clipboard

If you paste content from your clipboard (e.g., copied from MS Word or MS Excel), you usually also paste many unnecessary formatting tags from the original application. To avoid, this you should paste the content as plaintext.

If you already pasted text which resulted in undesirable formatting, you can use the undo function in VisualEditor to remove the content again if you have not yet saved the page or switched between visual and source editing mode.

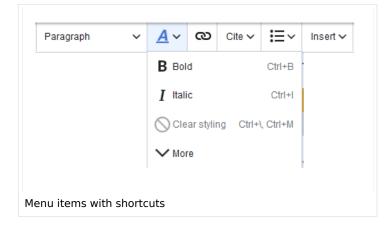

To paste content as plain text instead, use the shortcut Ctrl+Shift+v.

# Shortcuts

If you want to apply multiple formatting options at the same time, shortcuts are often the quickest way. For example, to show text in bold and italic, highlight the text and press Ctrl+b (for "**bold**") and Ctrl+i (for "*italics*"). Even a link can be quickly inserted by pressing Ctrl+k. Pressing Ctrl+b again will cancel the bold. Multiple formats can be removed after text selection with Ctrl+m.

All available keyboard shortcuts are marked accordingly in VisualEditor next to each menu item.

**Note:** For a list of all available shortcuts, click on "Keyboard shortcuts" in the Visual Editor help menu (the question mark menu item).

#### Inserting other content

Many typical page elements such as images, files and tables can be integrated into your page from the *Insert* menu.

- File formats with a preview option: jpg/jpeg, png, gif, pdf
- File formats without preview option are always inserted as links (e.g., Microsoft Office formats)

If you want to learn more about inserting these elements, go to the following help pages:

- Images
- Files (PDF, xls, doc, ...)
- Tables

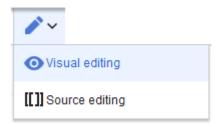

#### Wiki-specific content

Some functions in the *Insert* menu are little known from traditional word processing, but are quite typical for working with a wiki. Therefore, they are briefly introduced here. Find more information on the help pages here in the helpdesk or at mediawiki.org:

- **Comment:** Add comments to the page. These are only visible in the source code.
- Gallery: A simple picture gallery can support many process flows.
- Magic word: Wiki features such as signature, word counter, category tree or even process diagrams with draw.io can be integrated as a "magic word".
- Your signature: Only works on pages that allow signatures. Pages in the Namespace "Pages" are not included.
- Codeblock: Programming code is displayed here in clean code blocks, optionally with line numbers.
- **References list:** Creates footnote references.
- Chemical formula: The formula rendering uses an external service via Wikimedia's REST API.
- Math formula: An editor opens for entering a mathematical formula.

#### Switching between edit modes

When creating or editing a page, the page usually loads in visual editing mode. If you are familiar with the formatting language of MediaWiki ("Wikitext"), you can easily switch to source editing mode using the "Switch editor" menu item and edit your page content there:

#### Hints and tips

VisualEditor is optimized for editing web pages. That's why it has exactly the features that are often needed to create a wiki page. The consistent formatting of content supports the readability of your wiki content.

#### Text formatting

In the text formatting menu, the following additional options are available when a text passage has been selected:

*Text color*: different text colors can be selected via an inspector menu.

*Center align*: Text can be selected and centered paragraph by paragraph.

*Indent*: Text can be indented once (note: multiple indentation is only possible via the source text).

<u></u>	~	ര	Cite	~	≣	~	Ir

# Troubleshooting: Visual editing is disabled

If you only have the source editing option in your editor toolbar, please contact an administrator of your wiki. The following settings must be checked in this case:

- Global settings via the configuration manager
- Namespace manager settings

• Technical Reference: VisualEditor

## Files

You can insert already uploaded files or upload new files directly when editing an article.

#### Contents

1 Inserting a file	12
1.1 Drag-and-drop method	
1.2 Editor toolbar	12
2 Special features when including files	14
3 Maximum file size	15
4 Avoiding unusual file names	15
5 Allowed file types	15

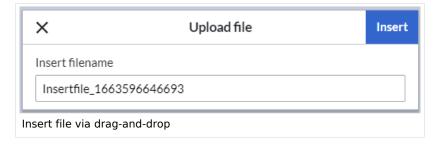

# Inserting a file

#### **Drag-and-drop method**

You can upload a new file when you edit a page:

- 1. **Drag** the file onto the page. A horizontal line will appear where the file will be dropped.
- 2. Change the file name in the Upload file dialog (optional).

- 3. Click Insert.
- 4. Double-click the thumbnail to adjust the size and positioning (optional).

#### **Editor toolbar**

To upload and insert a file from the editor toolbar:

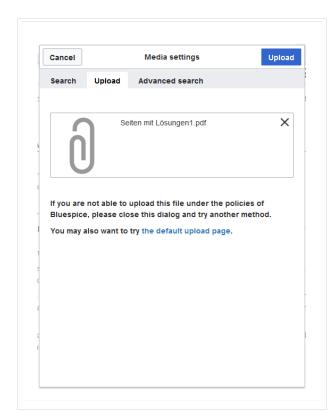

1. **Select** *Insert > Images and Media* from the editor toolbar.

<b>!</b> ≡~	Insert 🗸	Ω	
	Media		
	鼬 Templ	ate	

 Switch to the Upload tab (2) in the Media settings dialog to upload a new file. To select an existing file, switch to the Advanced search tab (3). The Search tab (1) shows the latest uploaded files for selection.

×	2	3	Media settings	
Search	Upload	Advanced search		
Q				8
Media se	ettings			

- 3. Click *Select a file.* Provide a *Target namespace* (optional). If you are unsure, leave the namespace setting as suggested.
- 4. Click Upload. The dialog window Media Settings opens.

Now click "Upload":

The general and advanced settings are largely identical to image files. However, there are differences in the linking options, as, for example, a PDF file is not displayed as an image directly on the page.

# Special features when including files

	<b>Custom</b> 300 × 218	рх
	Make full size	
2	3	
Link file description page	Embed this file	

There are three ways to link a file on a page:

- Link this file (1): The inserted link opens the file.
- Link file description page (2): The link leads to the file page on the wiki. There, you can view the file details or upload a new version of the file.
- **Embed this file (3):** The link inserts a preview image. The preview image opens the file description page when clicked. This only works with PDF and .tiff files.

**General Settings:** An alternative text is required if you embed the file on the page. This is done via the corresponding "Embed this file" button. Since a preview image is created here, the alternative text should be used just like with images.

If you link to the file or the file description page, VisualEditor will in both cases inserts the same link text, even though the link will lead to different pages. However, the displayed link text can be changed directly on the page. Just click into the text and change it accordingly.

**Note:** If you place a file link directly on already selected text, VisualEditor will replace the selected text with the file information. It is therefore advisable to insert a file link via VisualEditor when the cursor is located at a blank space.

#### Maximum file size

The maximum allowed file size cannot be configured in the wiki itself. The maximum allowed limit is defined on the server in the php.ini file in the PHP installation. The actual (possibly smaller) limit, however, is set in the BlueSpice installation in LocalSettings.php or another configuration file in the settings.d folder. The default setting is 32 MB.

Contact your wiki administrator if you receive an error message when trying to upload a larger file.

## Avoiding unusual file names

**Note:** When uploading a new file, you should check the file/page name for unusual special characters (e.g., ", \$, /, < , >, [,], {,], {,}). Change the name to include only standard characters, since the server file system could have problems with them or since some characters have special meanings in MediaWiki.

The special characters ( , ) , & , + can be used and are translated into their equivalent %-hex notation.

: will be converted to spaces, unless it is part of an existing namespace prefix.

#### Allowed file types

If you get an error message during the file upload, the file type might not be allowed. Allowed file types are set by an admin user in the Config Manager.

## Images

#### How to insert an image on a page

In addition to text, images are probably the most important components of typical content pages. With VisualEditor, the images can be uploaded, inserted and formatted all in one step. Images are inserted via the menu item *Insert > Media*.

The dialog box*Media Settings* opens.

Cancel		Media settings	Uploa

Categ	ories
Ac	

Here you can assign a namespace and categories to a picture.

- **Target namespace:** The picture can be assigned directly to a namespace. The access rights of the namespace are also applied to the image. This means that only users with access to the namespace can view the image on the wiki.
- **Name:** Choose a name that makes it easy to find the image later during an image search. Or simply leave the current file name.
- **Description:** The description is mainly useful for photos or infographics when the image name does not adequately describe the image content.
- **Categories:** Here, the picture can be assigned to categories.

**Note:** When uploading a new file, you should check the file/page name for unusual special characters (e.g., ", \$, /, < , >, [,], {,], {,}). Change the name to include only standard characters, since the server file system could have problems with them or since some characters have special meanings in MediaWiki.

The special characters ( , ) , & , + can be used and are translated into their equivalent %-hex notation.

: will be converted to spaces, unless it is part of an existing namespace prefix.

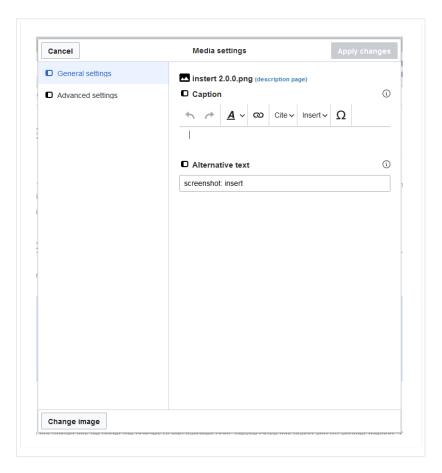

**Error message when saving:** If the image already exists, an error message is displayed. If you want to overwrite the existing file, you can click on the file name and overwrite the file via the image page in the wiki. This is done by clicking the "Upload a new version of this file" link in the "File Versions" section. In VisualEditor itself overwriting an image does not not work.

	Something went wrong

	DISINISS

#### **General settings**

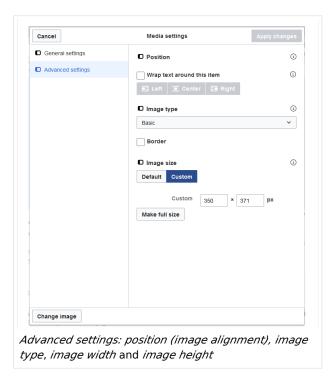

In the general settings, the image descriptions are added.

**Caption:** The caption is shown with framed images and thumbnails. Note: If you change an image to frameless and then back to "framed", you need to re-enter the caption.

**Alternate text:** The alternate text should be entered for each image since it replaces the image in certain contexts. For example, this so-called "alt" text is used by users who work with screen readers. Screen readers are used by users with visual limitations, but search engines can also read this text. In some business areas, the indication of the "alt" text is also required by law. If you are not sure, ask your company accordingly.

#### **Advanced settings**

In the advanced settings, you can set the position (image alignment), image type, image width and image height.

The following settings are possible:

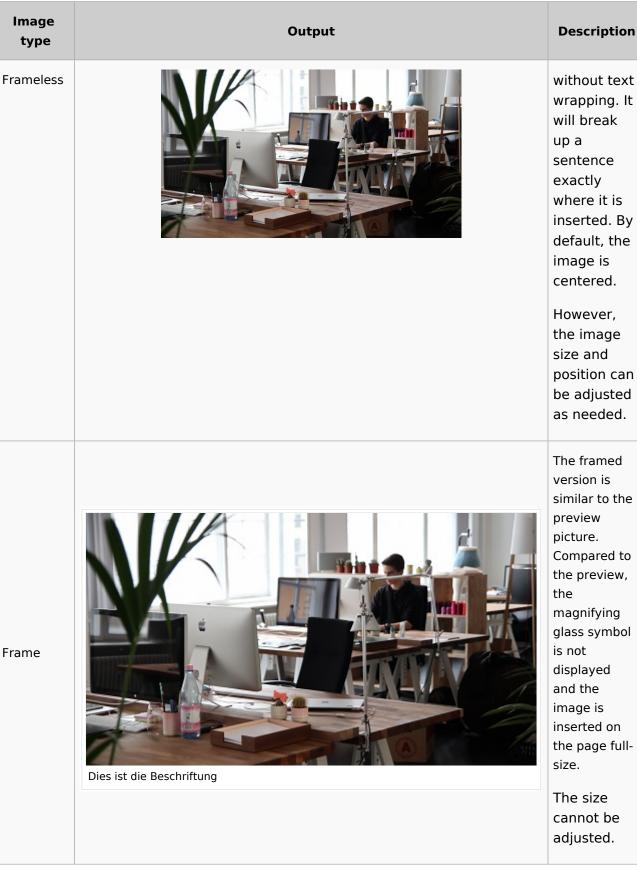

- Position:
  - Wrap text around this item: If unchecked, the image is left-aligned between two paragraphs. If checked, one of the following positions can be selected:
    - *Left:* The image is displayed on the left side of the text. The content surrounds the image.
    - *Center:* The image is displayed centered between two paragraphs.
    - *Right:* The image is displayed to the right of the text. The content surrounds the image.
- **Image type**: If you insert an image with VisualEditor, the image is usually linked to the Media Viewer. To suppress the link on an image, you must add an empty link attribute to the image tag in the source code:
  - o frameless picture with link (standard): [[File:adult-chair-company-380769.jpg|frameless]]
  - o frameless picture without link: [[File:adult-chair-company-380769.jpg|frameless|link=]]

lmage type	Output	Description
		The preview picture shows the image with a

lmage type	Output	Description
Thumbnail	This is the caption	standard width of 300px. The width can be adjusted as required. In addition, the caption
		is displayed below the picture. A preview icon indicates that the image can be viewed in a larger size.
		The frameless version shows the picture without a frame. The width can be adjusted as required (here we set the example to 300px).
		The caption does not appear below the picture. By default, the image is inserted

Frame

lmage type	Output	Description
Basic		The basic version is like the frameless version. By default, text does not wrap, but the text is separated at the point where the image was inserted. The image is inserted in full width, while the frameless image is inserted in miniature image width (300px). The size can be adjusted.

#### • Image size:

- Standard: sets the image width to 300px (unless the standard width has been changed in the user preferences).
- *Custom:* allows setting a custom size.
- Make full size: resets the size to the actual image size. Note: An image cannot be set to a larger dimension than the actual image dimension.

#### Inserting images with drag-and-drop

In visual edit mode, an image can be dragged directly from the file folder into the wiki with the mouse. It is important that the position for inserting the image shows a horizontal line before you drop the image. Otherwise the image will not be uploaded or inserted.

Edit

#### Drag-and drop settings v4.3+

The standard image settings that should be applied when placing an image via drag-and-drop can be adjusted in the Config Manager.

#### Images and namespaces

You can save pictures and files in the general namespace (pages). If pictures should be accessible by all users, you can save these pictures in the main namespace if other namespaces have access restrictions. If you have created additional namespaces, you can also save images in these namespaces if you have the necessary access rights. Images are then only shown to users who have the necessary read permissions in these namespaces.

In the upload dialog, the namespace field always suggests the namespace of the current page for the image upload.

#### Changing an embedded image

**Different image:** In the editing mode of the page, it is possible to edit the image with a doubleclick. Use the "Change image" button to exchange the image with a different image.

**Same image with different version:** If you want to use a new version of the same image, open the "Special:Upload file" page in a new browser tab (so that you don't lose any changes on your wiki page). There, you can save already existing pictures with the same name again. The original image is kept as a version.

# Tables

# Contents 1 Insert a table .....

## Insert a table

In VisualEditor, choose "Insert > Tables" to insert a table in a page:

After entering the rows and columns, an empty table appears with the edit menu:

When the mouse rests on a symbol, the respective function is displayed.

Double-click in the cells to insert text:

Time	Monday	Tuesday	Wednesday
8:00	Emails		Home office
9:00		Team meeting	
10:00	Phone calls		Phone calls
11:00			
12:00	Lunch	Marketing plan	

#### Merge rows and columns

To merge a row or column, select the cells in a row or in a column. The inspector will show a "Merge" button. Click it to merge the cells. The same button is called "Unmerge" if you want to separate connected cells.

		$\sim$

The visual editor makes it easy to format content as a table. The following alternatives for creating tables exist:

- Tables can also be inserted as a csv file on a page (just drag the CSV file onto the page in edit mode)
- Complex tables can alternatively be attached to the page as an xlsx file.

## **Related info**

• Filterable tables
