Manual:Extension/Workflows/Activity/ApprovePage

Description

The ApprovePage activity will set the status of a page from *draft* to *approved* status. Flagging will be done with a special user-context to avoid permission errors. This activity can only be used with pages that have the approval feature ([FlaggedRevs](#)) enabled.

Short profile	
Name	ApprovePage
Async	Yes
BPMN type	<code>bpmn:Task</code>
BPMN Extension Element "wf:type"	<code>approve_revision</code>

Properties

Name of property	Description	Type
<code>comment</code>	The comment to be saved with the approval	string
<code>revision</code>	The revision ID to approve. If not provided explicitly, the page revision of the workflow context will be used, which may be outdated.	int

Features

FlaggedRevs is a MediaWiki extension that activates an approval mechanism.

New versions of an article are initially marked as drafts and remain so until a user with revision rights checks and approves the page.

The MediaWiki extension is customized in BlueSpice. It uses the [FlaggedRevsConnector](#) to work alongside [workflows](#), realising the complete functionality of an editorial process with a final approval step.

Warning! The setting `FR_INCLUDES_FREEZE` for handling the state of included files of an approved wikipage has [no long term support by](#) and should not be introduced in a new wiki for that reason.
