## Feedlink erstellen

Use an RSS tag for each feed:

```
<rss max=4 highlight="MediaWiki BlueSpice">http://blog.bluespice.com/feed/</rss>
```

## Attributes

The rss element can contain parameters if you provide them as attributes to the rss element:

attribute	description
<b>template</b> =" <i>name</i> "	Encodation of the feed. You need iconv for conversions
item-max-length=" <i>1000</i> "	maximum lenght of text that is shown
<b>date</b> =" <i>(Y-m-d H:i:s)</i> "	shows date and time
<b>max</b> =" <i>n</i> "	shows at most the given number of elements
<b>highlight</b> =" <i>term1 term2 ...</i> "	highlight selected terms in different colours
<b>filter</b> =" <i>term1 term2 ...</i> "	show only RSS items with at least one of the terms
<b>filterout</b> =" <i>term1 term2 ...</i> "	do not show any RSS item containing any of these terms
<b>reverse</b>	display the RSS items in reverse order

## Example

```
<rss max=4 highlight="MediaWiki BlueSpice">https://blog.bluespice.com/feed/</rss>
```
