Arrays

The **Arrays** extension (formerly known as *ArrayExtension*) creates an additional set of parser functions [1] that operate on arrays [2]. For more information please visit [MediaWiki](#).

Reference:ParserFunctions

The **ParserFunctions** extension enhances the wikitext parser with helpful functions, mostly related to logic and string-handling. Since MediaWiki 1.15, ParserFunctions has incorporated most (but not all) of the functions from the [StringFunctions](#) extension, which may be enabled or disabled.

For more information please visit [MediaWiki](#).

ParserFunctions

Enhance parser with logical functions

Reference:Variables

The **Variables** extension allows you to define a variable on a page, use it later in that same page or included templates, change its value, possibly to a value given by an expression in terms of the old value, etc.

Variables

Parser functions allowing to work with dynamic variables in an article scoped context

For more information please visit [MediaWiki](#).
