Features

GroupManager allows to create new groups, and to edit and delete existing groups.

Using the group concept, you can soften the wiki principle to work with a more granular permissions model. Using groups, administrators can assign differnet permissions to users. For example, a group can have read permissions, but no edit permissions. Use the group concept wisely, since otherwise the cooperative dynamic suffers.

With the Group manager, you can:

- create groups
- edit groups
- delete groups (system groups cannot be deleted or edited)

Users are assigned to groups in the User manager. Permissions are assigned to groups in the Permission manager.
