Description

BlueSpiceReminder allows users to keep track of states of pages by creating reminders for the page on particular date.

Usage / Features

- Set a personal reminder with date and comments on every page (via the flyout "Reminder" in the right tool box).
- List of personal reminders.
- Special page with filters for all reminders of a wiki.
- Possibility to mark an article automatically as *expired*.
- Simplified quality assurance through active reminders via email and within the wiki.

Technical information

Configuration

Some aspects of this extension can be configured in the user preferences, in the tab "BlueSpice" in the section "Reminder". Here wiki users can configure:

- Default reminder period.
- Namespaces in which reminders will be disabled for.
- Whether reminders will be set automatically on article creation.

Rights (permissions)

This extension does not require any special rights. Every user with "edit" can create reminders.

Requirements

Reminder requires BlueSpiceFoundation.

What is BlueSpiceReminder?

BlueSpiceReminder allows users to keep track pages by creating reminders for a particular date.

Where to find BlueSpiceReminder

Reminders are set in the QM tools under the "Reminders" menu item.

Reminders in the flyout

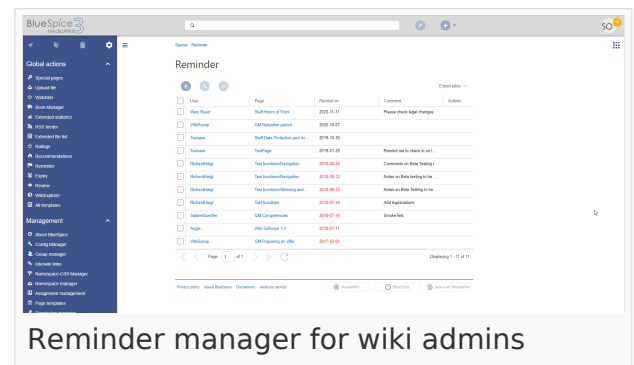

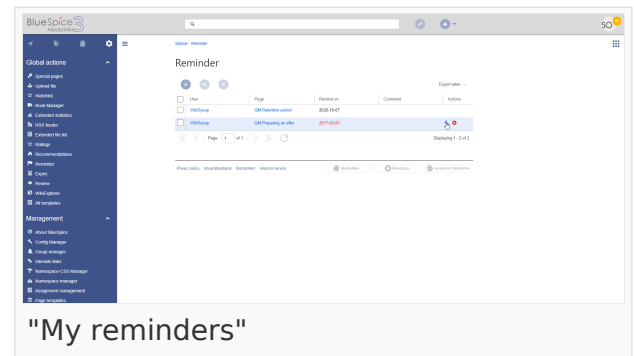

Usage

In the flyout page, the following reminder elements can be specified:

- **Date:** Date on which the reminder is due
- **User:** defaults to the currently logged-in user, but can be changed to a different user
- **Comment:** An optional comment text to be shown when the reminder is due.

Once all fields are set, click "Save" to save the reminder.

On the right is a list of all reminders set for other users for the current page.

At the bottom of the page, there are two buttons that open the reminder overview:

- **Manage reminders:** Available only for wiki admins - opens `Special:Reminder` and shows a list of all reminder for all pages and all users. Wiki admins can delete reminders or edit the due date and other details.
- **My reminders:** Opens `Special:Reminder/USER_NAME` and shows the reminders for the currently logged-in user. It has the same functionality as "Manage reminders", just in the scope of the current user.
