For more info, visit Mediawiki .			

Features

UEModuleDOCX exports pages and books to the docx-format. This extension requires an [external license](#).

This extension allows the output of a wiki page or book to [Office Open XML](#). The content is inserted in a user-defined, freely selectable template. The conversion is done via an external tool, which is requires a [license](#).

- Conditions:
 - If possible, the conversion should be based on HTML template.
 - CSS / inline-styles should be supported. Here is the floating in pictures a bit critical.
 - Running headers and footers are necessary.
 - Images are embedded.
 - Attachments are not possible.
 - The template is a docx-file. The generated content from the wiki is inserted into the template at the place where the variable `$WIKICONTENT$` is located.
 - Meta information is stored in the docx-document (author, generator, etc).
