## Description

---

**BlueSpicePermissionManager** offers easy and user-friendly way to manage user permissions on the wiki.

## Usage / Features

---

PermissionManager is for managing rights or permissions at a group and namespace level:

- Assignment of permissions to a user group.
- Display of permissions inherited from groups in the permissions hierarchy.
- Display of permissions blocked by another group.
- Assignment of permissions on a wiki level (applies to all pages in all namespaces) and on per-namespace basis, meaning that a user group can have certain permission in one namespace but still be denied the same permission in another namespace.

## Technical information

---

### Configuration

---

Some aspects of this extension can be configured on `Special:BlueSpiceConfigManager`, under section "Permission manager". Here wiki administrators can configure:

- Backup limit: Defines, how many backups, which are created everytime the permission settings are saved, are stored.

### Rights (permissions)

---

Users must have "permissionmanager-viewspecialpage" permission.

### Requirements

---

PermissionManager requires BlueSpiceFoundation.

### User manual

---

For detailed description and usage, visit our user manual.
