Description

BlueSpicePermissionManager offers easy and user-friendly way to manage user permissions on the wiki.

Usage / Features

PermissionManager is for managing rights or permissions at a group and namespace level:

- Assignment of permissions to a user group.
- Display of permissions inherited from groups in the permissions hierarchy.
- Display of permissions blocked by another group.
- Assignment of permissions on a wiki level (applies to all pages in all namespaces) and on per-namespace basis, meaning that a user group can have certain permission in one namespace but still be denied the same permission in another namespace.

Technical information

Configuration

Some aspects of this extension can be configured on `Special:BlueSpiceConfigManager`, under section "Permission manager". Here wiki administrators can configure:

- Backup limit: Defines, how many backups, which are created everytime the permission settings are saved, are stored.

Rights (permissions)

Users must have "permissionmanager-viewspecialpage" permission.

Requirements

PermissionManager requires BlueSpiceFoundation.

User manual
