## Performance Optimization: ManualRecache of LanguageCache

To prevent Rebuilding LocalizationCache with every page call, apply the following configuration:

**Important!** When following these instructions, make sure that the `$wgCacheDirectory` variable is set in advance. This is already the case in the BlueSpice standard delivery in the file `settings.d/005-Directories.php`.

**Note:** This performance optimization achieves the best performance by enabling and configuring [opcache in PHP](#).

In the `settings.d` folder of your codebase, create the file `006-ManualRecache.php` with the following contents:

```
<?php
$wgLocalisationCacheConf = [
    'class' => LocalisationCache::class,
    'store' => 'array',
    'storeClass' => false,
    'storeDirectory' => $wgCacheDirectory,
    'manualRecache' => true,
];
```

Then delete all existing files in the `cache` folder of your codebase. Then manually re-create the LocalizationCache by entering the following on your console:

```
php /pfad/zur/installation/maintenance/rebuildLocalisationCache.php --force
```

Finally, make sure that this is done regularly in the background via cronjob ("Task Scheduler" under Windows). We recommend this twice a day, for example at 6am and 6pm.

## Performance Optimization: PHP

### Contents

1	<a href="#">opcache</a>	3
2	<a href="#">zlib</a>	3

## opcache

---

Enable the Zend extension opcache in PHP. In the php.ini, we recommend the following configuration:

```
opcache.enable=1
opcache.memory_consumption=512
opcache.max_accelerated_files=100000
opcache.validate_timestamps=1
opcache.revalidate_freq=2
opcache.optimization_level=0x7FFF9FFF
```

*Up to BlueSpice 4.2.x only* -v4.2.x : In addition, you should include the BlueSpice configuration files ( `extensions/BlueSpiceFoundation/config/*`) in the Opcache blacklist ( `opcache.blacklist_filename` ). You can find more information in the [official PHP documentation](#) for configuration.php.

This config-file is no longer available from version 4.3.

## zlib

---

Activate the extension zlib. In the php.ini we recommend the following configuration:

```
zlib.output_compression = On
zlib.output_compression_level = 9
```

You can find more information in the [official PHP documentation](#) for zlib.
