This part of the installation guide provides step-by-step instructions for the Windows system preparation. This is necessary if you want to install BlueSpice afterwards.

Follow these chapters in the order listed. At the end of each chapter you will see a link to the next chapter.

Please also pay attention to the chapter "Introduction". It contains additional information about this manual.

- Introduction
- Setting the system rights of the temporary Windows folder
- .NET Framework 3.5
- IIS-Webserver
- urlrewrite
- Microsoft Visual C++ Redistributable
- PHP Manager
- PHP
- MariaDB
- OpenJDK
- Apache Tomcat
- OpenSearch (from BlueSpice 4.4) / Elasticsearch (to BlueSpice 4.3)
- Python

# Setup:Installation Guide/System Preparation/Windows/.NET Framework 3.5

#### Contents

1	Open the Server Manager and the roles Manager	. 3
2	Installation of the framework in the Roles Manager	. 4
3	Next step	. 5

#### Open the Server Manager and the roles Manager

**Open** the Server Manager. Unless otherwise configured, it automatically starts when you log on to the server. You can also find it in the start menu with the search term "Server Manager".

🛼 Server Ma × WELCOME TO SERVER MANAGER Dashbo Local Server All Servers 1 Configure this local server File and Storage Services 2 Add roles and features 3 Add other servers to manage 4 Create a server group 5 Connect this server to cloud services Hide ROLES AND SERVER GROUPS File and Storage Services Local Se All Se Manageability € € Manageability Manageability Events Events Events Performance 1 Services 1 Services BPA results Performance Performance BPA results BPA results

**Click** "Manage" (1) in the top toolbar and then **click** "Add Roles and Features" (2) in the context menu:

You are now looking at the following view:

BlueSpice

2 Installing Apache Tomcat	8
3 Configuring Apache Tomcat	11
4 Reviewing the installation	14
5 Installing the web apps	14
6 Next step	14

Apache Tomcat is required for the PDF export. The following steps are optional and only required if you want to use this service in your BlueSpice installation.

Operation of Apache Tomcat requires **OpenJDK**. If you have not installed it, follow the link above.

#### Download

Open the official download page (1) in your browser and go to the version 10 (2) download page.

Download the "32-bit/64-bit Windows Service Installer"

32		

Save and close the file.

In the same directory, open the file server.xml in a text editor and make sure that the complete block

```
<Connector port="8080" protocol="HTTP/1.1"
... />
```

looks like this:

```
<Connector port="8080" protocol="HTTP/1.1"
connectionTimeout="20000"
URIEncoding="UTF-8"
redirectPort="8443"
address="127.0.0.1" />
```

Save and close the file.

Find the entry "Configure Tomcat" in the start menu and open it:

≡	Recently added	Windows Server

#### Installing the web apps

[[File:{{{file}}}Please unzip the installed BlueSpice folder and move the subfolder to C:[center]]\bluespice\var\www. Rename the folder to "w".

After the successful installation of BlueSpice, please follow the next steps to install the web services and activate the respective BlueSpice extension:

• PDF-Export

#### Next step

If you have completed all steps successfully, you can delete the previously downloaded "apache-tomcat-10.0.11.exe" file from your hard drive and continue to the next step " Elasticsearch".

# Setup:Installation Guide/System Preparation/Windows /Elasticsearch

Elasticsearch is available up to BlueSpice 4.3. Newer versions of BlueSpice 4 support OpenSearch.

# Contents

Blue Spice MediaWiki

1	Download	. 16
2	Unpacking the ZIP archive	. 16
3	Installing the plugin ingest-attachment	. 17
4	Installing the Elasticsearch service	. 18
5	Configuring and starting the Elasticsearch service	. 18
6	Next step	. 20

Elasticsearch is a prerequisite for running Advanced Search. The steps listed here are optional and only required if you plan to use them in your BlueSpice installation.

To run Elasticsearch, OpenJDK is required. If you have not installed it, install it now.

# Download

The content of this section refers to external sources and is current at the time of writing this documentation. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

BlueSpice ist derzeit mit Elasticsearch 6.x ab Version 6.8.21 kompatibel. Elasticsearch > 6.8.x wird derzeit nicht unterstützt.

Die jeweils aktuelle Version können Sie dieser Liste entnehmen. Daraus ergibt sich folgender direkter Download-Link: https://artifacts.elastic.co/downloads/elasticsearch/elasticsearch/elasticsearch/elasticsearch/elasticsearch/elasticsearch/elasticsearch-6.8.23.zip .

Folgen Sie dabei den Download-Anweisungen Ihres Browsers.

In the following, the Elasticsearch version 6.8.23 is used and only serves as an example for the latest version of the 6.x version series, which you can download at the time of your installation.

# Unpacking the ZIP archive

**Unpack** the ZIP archive that you have just downloaded in a Archiv in a suited system path of your hard drive.

This documentation assumes the folder structure recommended by us. For

this reason, Elasticsearch is unpacked at this point in the folder C: \bluespice\bin\elasticsearch-6.8.23. If you have individual wishes, adjust these paths according to your own understanding.

#### Installing the plugin ingest-attachment

Change to the directory "C:\bluespice\bin\elasticsearch-6.8.23\bin" (1).

**Right-click** on a free area of the Explorer window with the Shift-key pressed.

Click "Open PowerShell window here" (2):

> • 🛧 🔒 -	This PC $\rightarrow$ Local Disk (C:) $\rightarrow$ BlueSpice $\rightarrow$ bin	> elasticsearch-6.8.23 → bin		5

**Execute** the command ". \elasticsearch-plugin.bat install -b ingest-attachment":

If your server does not have an active internet connection, then download the plug-in ingest-attachment as zip archive and install it, as documented directly by the manufacturer.

## Installing the Elasticsearch service

Run the "elasticsearch-service.bat install" command and wait for the process to complete:

### Configuring and starting the Elasticsearch service

**Press** the key combination Windows+R.

Enter "services.msc" (1) in the dialog window and click "OK" (2):

🖅 Run	×
	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
<u>O</u> pen:	services.msc 1 ~
	2 OK Cancel <u>B</u> rowse

**Search** for the service "Elasticsearch 6.8.23" and open it with a double-click:

1	21	
2	21	
3	22	
4	26	

BlueSpice

The web server delivers your BlueSpice installation to the users' browsers. Without a web server, BlueSpice cannot be used. The steps listed here are required.

#### Introduction

We recommend to use the most system-optimized software possible for a live operation of BlueSpice both under Linux and under Windows. For this reason, the documentation of an installation of Apache (XAMP) under Windows is omitted. This chapter lists the steps that are necessary to install the Microsoft IIS Web Server service on Windows Server >= 2016.

#### Open the Server Manager and the Roles Manager

**Open** the Server Manager (like in the previous step). Unless otherwise configured, it starts automatically as soon as you log in to the server. Otherwise, you will find it in the start menu under the search term "Server Manager". You are now looking at the following view:

Click "Manage" (1) and then click "Add Roles and Features" (2):

#### Installation of IIS in the Roles Manager

Sie befinden sich jetzt im Roles manager.

**Click** "Next >" until you reach the "Server Roles" area (1). There, you **activate** the role "Web Server (IIS)" (2):

Click "Add Features" in the resulting pop-up window:

#### Click "Next >":

📥 Add Roles and Features Wizard				-		×
Add Roles and Features Wizard Select server roles Before You Begin Installation Type Server Selection Server Roles Features Web Server Role (IIS) Role Services Confirmation Results	Select one or more roles to install on the selected server. With the successful completion of all these steps, the IIS web server is now installed. Check the functionality by starting Internet Explorer on the server and calling the URL http://localhost/. If installed correctly, you will see the welcome page of the IIS Web server:

#### Next step

If you have successfully completed all of the above steps, proceed to the next step: urlrewrite.

# Setup:Installation Guide/System Preparation/Windows /Introduction

This documentation is as detailed as possible and illustrated with screenshots. It covers the recommended basic system configuration. Nevertheless, we assume that you already have previous knowledge of the installation and operation of Windows Server systems.

The prerequisite is an already installed Windows server starting at version 2016 without any additional software already installed.

In this documentation, Windows Server 2022 was used. With different versions, it is possible that you will notice slight differences in the installation interface.

The documentation also includes clearly marked infoboxes that inform you about whether particular installation steps are necessary and that provide any further information.

First start with setting the system rights of the temporary Windows folder.

## **MariaDB on Windows**

#### Contents

2	Installation	29
3	Setting the environment variable	32
4	Next step	36

BlueSpice stores your content in a database for which you need to install a corresponding server. The steps listed here are required.

Alternatively, you can also use MySQL at this point, but we recommend the MariaDB database server described as below.

#### Download

#### Next step

If you have successfully completed all of the above steps, proceed to the next step: OpenJDK

# Setup:Installation Guide/System Preparation/Windows /Microsoft Visual C++ Redistributable

Contents	
1 Download	7
2 Installation	7
3 Next step	7

BlueSpice

The installation of Visual C ++ Redistributable for Visual Studio 2015 is required to run PHP in version 7.x on Windows. The steps listed here are required.

## Download

The content of this section refers to external sources and is current at the time of writing this documentation. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

According to Microsoft, the corresponding installation package is available under a permanent download link (documentation at Microsoft). Download this setup package.

## Installation

**Open** the Setup, **confirm** the "license terms and conditions" (1) and **click** "Install" (2):

## Next step

If you have successfully completed all of the above steps, go to the next step: PHP Manager.

## **OpenJDK on Windows**

## Contents

1	Download	. 39
2	Unpacking the ZIP archive	. 40
3	Setting the environment variable	. 40
4	Next step	42

OpenJDK is a prerequisite for operating the Extended Search and the PDF export. The steps listed here are therefore optional and only required if you want to use one or more of these services in your BlueSpice installation.

In the following documentation, we work with OpenJDK in version 17.0.2, the current version at the time of writing. You can also use other versions as long as they meet the system requirements we have published. Please note that you then have to adjust the information in this documentation accordingly.

## Download

🕂 🔃 🔁 JDK Builds from Oracl...

The content of this section refers to external sources and is current at the time of writing this documentation. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

#### Open the official website at java.net (1) and click "JDK 17" (2):

#### **Download** the ZIP archive for Windows:

## Unpacking the ZIP archive

This documentation is based on the folder structure recommended by us. If you want to adjust this individually, you have to adjust the paths yourself according to your own level of knowledge.

Unpack the downloaded ZIP archive to *C:\BlueSpice\bin*. The file structure *C:\BlueSpice\bin\jdk-17.0.2* should be the result.

#### Setting the environment variable

**Enter** the key combination Windows+R.

Enter "SystemPropertiesAdvanced.exe" (1) in the dialog window and click "OK" (2):

#### **Click** "Environment Variables...":

ystem Propertie	S			)

Variable name:	JAVA_HOME	
Variable value:	C:\BlueSpice\bin\jdk-17.0.2	
Browse Directory	3 Browse File	4 OK Cancel

**Close** all newly opened windows one after the other by clicking "OK".

#### Next step

If you have successfully completed all of the above steps, proceed to the next step: Apache Tomcat.

# Setup:Installation Guide/System Preparation/Windows /OpenSearch

OpenSearch is available from BlueSpice 4.4. Earlier versions of BlueSpice 4 support Elasticsearch.

#### Installation

Follow the official installation instructions on opensearch.org. Example for Debian:

https://opensearch.org/docs/latest/install-and-configure/install-opensearch/windows/

## **Plugin installation**

You also need the plugin *ingest-attachment*. Install it as described here:

https://opensearch.org/docs/latest/install-and-configure/plugins/

#### Next step

If you have completed all steps successfully, you can proceed to the next step "Python".

## Setup:Installation Guide/System Preparation/Windows/PHP

6	Next step	60

BlueSpice

The source code of BlueSpice is based on the scripting language "PHP". It must be installed on your server in order to operate BlueSpice. The steps listed here are required.

PHP is not installed with a "classic installation package" but the sources are downloaded and integrated into IIS via the PHP Manager that you installed in the previous step.

## Download

The content of this section refers to external sources. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

The PHP version in this instruction serves only as an example.

VC15 x86 Non Thread Safe (2022-Feb-24 17:53:21)					

Follow the download instructions.

## Unpacking the ZIP archive

**Unpack** the ZIP archive that you just downloaded into a useful system path on your hard drive.

This documentation assumes the recommended folder structure.

For this reason PHP will be unpacked into the folder C:\bluespice\bin\php-<version>. If you have a different folder structure, you must adapt these paths accordingly.

## Setting the environment variable

To use PHP easily on the command line of Windows, it is necessary to configure an environment variable in Windows. Perform the following steps:

**Enter** the key combination Windows+R.

Enter "SystemPropertiesAdvanced.exe" (1) in the dialog window and click "OK" (2):

🖅 Run	×
	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
<u>O</u> pen:	SystemPropertiesAdvanced.exe
	2 OK Cancel <u>B</u> rowse

**Click** "Environment Variables...":

System Properties	$\times$
Computer Name Hardware Advanced Remote	
You must be logged on as an Administrator to make most of these changes Performance Visual effects, processor scheduling, memory usage, and virtual memory Settings	
User Profiles Desktop settings related to your sign-in S <u>e</u> ttings	
Startup and Recovery System startup, system failure, and debugging information Settings	
Enviro <u>n</u> ment Variables	]
OK Cancel Apply	

**Double-click** the entry "Path" in the section "System variables":

Blue Spice MediaWiki

Click "New":

Edit environment variable	×
%SystemRoot%\system32	New
%SystemRoot%	
%SystemRoot%\System32\Wbem	Edit
%SYSTEMROOT%\System32\WindowsPowerShell\v1.0\	
%SYSTEMROOT%\System32\OpenSSH\	Browse
	Delete
	Move Up
	Move Down
	Edit text
ОК	Cancel

**Add** the path to your unpacked PHP version, which contains the php.exe file:

Edit environment variable	×
%SystemRoot%\system32	New
%SystemRoot%	
%SystemRoot%\System32\Wbem	Edit
%SYSTEMROOT%\System32\WindowsPowerShell\v1.0\	
%SVSTEMROOT%\System32\OpenSSH\	Browse
C:\BlueSpice\bin\php-7.4.28	Delete
	Delete
	Move Up
	Move Down
	Edit text
OF	K Cancel

Close all newly opened windows one after the other by clicking "OK".

#### Checking the environment variable

To make sure the environment variable is set correctly, perform the following steps:

**Enter** the key combination Windows+R.

Enter "cmd" (1) in the dialog window and click "OK" (2):

The command prompt opens.

BlueSpice

**Type** "php -v" (1) and **press** the *Enter* key. The found PHP version will be displayed (2).

If this is not the case, then the path to the php.exe file in the environment variables was specified incorrectly.

## Configuring IIS for PHP

In the following steps, PHP will be included in IIS and IIS will be configured to provide a working basic setup:

**Press** the key combination Windows+R to call up IIS Manager.

**Enter** "inetmgr" (1) in the dialog window and **click** "OK" (2):

Select your server name (1) in the left pane and then **double-click** "PHP Manager" (2):

#### Click "Register new PHP version":

Geben Sie den Befehl "pip install pygments" ein und warten Sie, bis der folgende Prozess

BlueSpíce

## Completion

Your Windows server is now fully prepared for the actual installation of BlueSpice.

## Setup:Installation Guide/System Preparation/Windows /Setting the system rights of the temporary Windows folder

## Contents

1 Procedure	71
2 Next step	76

Various applications require rights to write to the C:\Windows\Temp folder. These are not set as needed by default. In order to be able to carry out all further steps smoothly and also to be able to operate BlueSpice, you must first set these rights.

## Procedure

**Open** Windows Explorer:

**Right-click** on the folder "Temp" (1) and open the "Properties" (2):

Open Open in new window	Local Disk (C:) > Windows			ڻ ~	. ○ Search Windows		
Pin to Quick access	Name	Date modified	Type	Size		^

2 Installation	
3 Next step	

BlueSpice

The "urlrewrite" module for IIS is only necessary if you want to configure redirection rules in your web server. If you want a setup which is recommended by us and also according to the recommendations of the Wiki Media Foundation, this step is required.

## Download
