4 Reviewing the installation	10
5 Installing the web apps	10
6 Next step	10

Apache Tomcat is required for the PDF export. The following steps are optional and only required if you want to use this service in your BlueSpice installation.

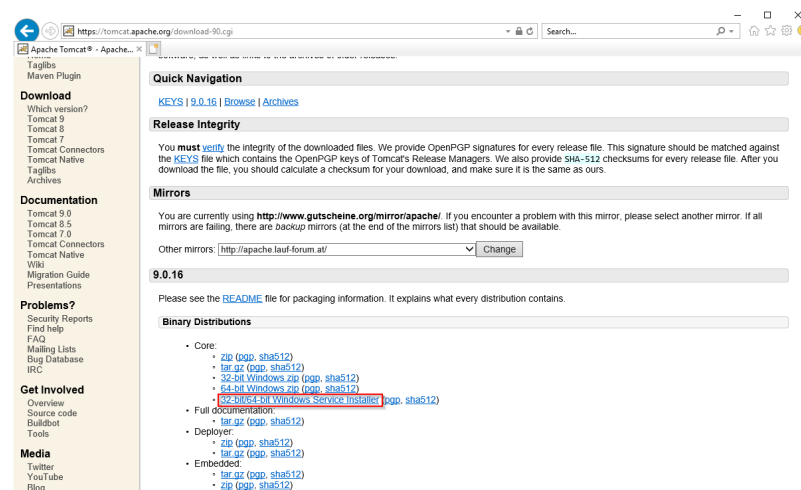

Operation of Apache Tomcat requires [OpenJDK](#). If you have not installed it, follow the link above.

Download

Open the [official download page](#) (1) in your browser and go to the version 10 (2) download page.

Download the "32-bit/64-bit Windows Service Installer"

Please note that the download on your Windows server with Internet Explorer only works if you have configured the Internet Explorer Advanced Security Settings in the Server Manager. Please refer to the technical

documentation from Microsoft.

This guide uses version 9.0.16 of Apache Tomcat and is just an example of the latest version that you can download at the time of installation.

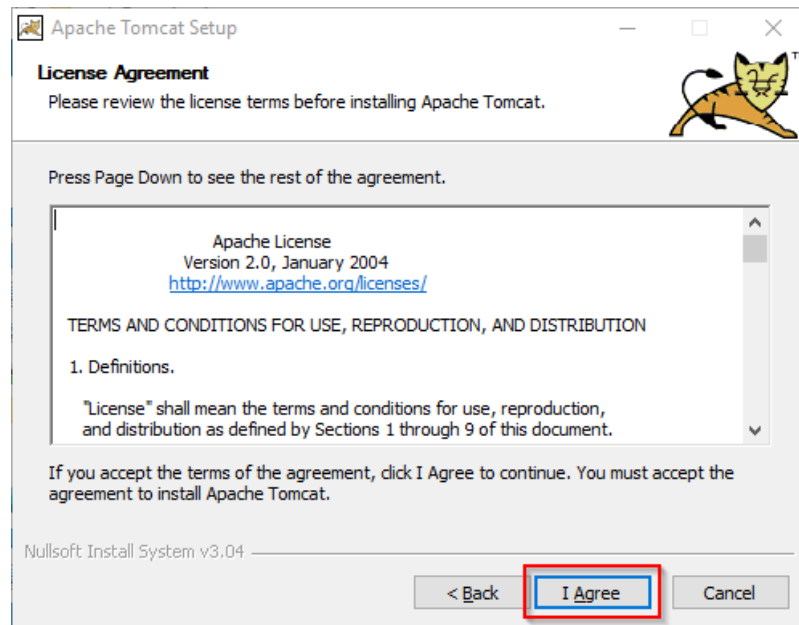

Installing Apache Tomcat

Open the downloaded file "apache-tomcat-10.0.12.exe".

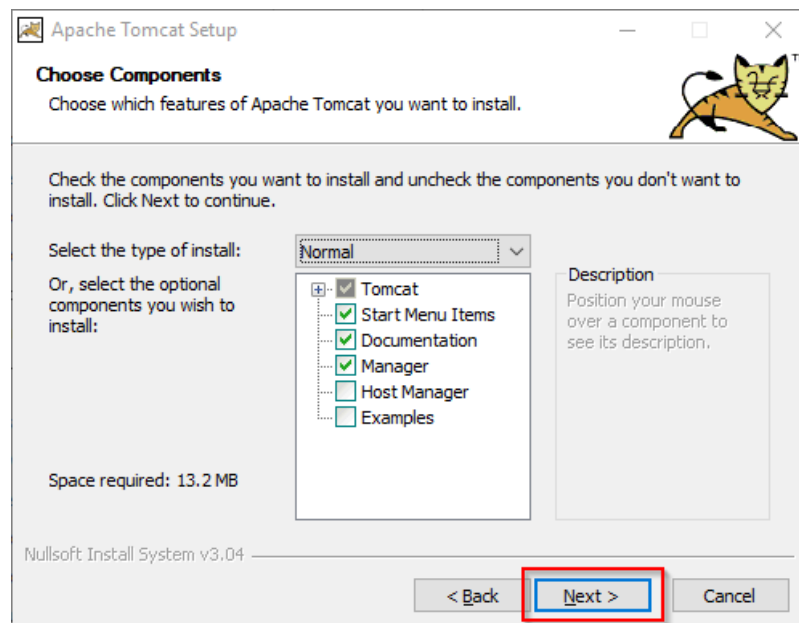

Start the installation by clicking "Next >":

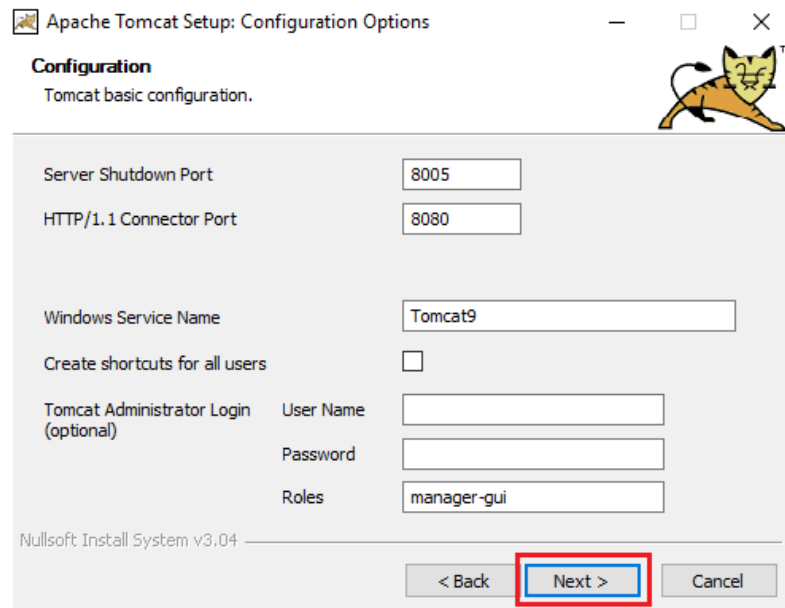

Confirm the license agreement by clicking "I Agree":

Click "Next >":

Click "Next >" again:

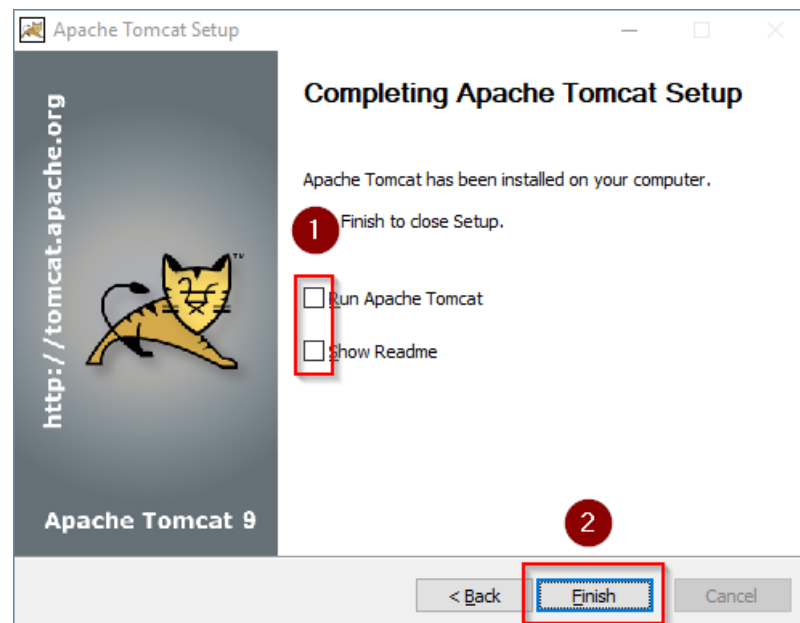

Select (1) the home directory of your [OpenJDK Installation](#) (2) and click "Next>" (3):

Start the Tomcat Installation:

At the end of the installation, leave both preselected checkboxes (1) and finish the setup (2)

Configuring Apache Tomcat

Change to the installation directory of Tomcat. By default, you can find it at `C:\Program Files\Apache Software Foundation\Tomcat 9.0\conf`.

Open the context.xml file in a text editor and replace the one-time line

```
<Context>
```

with

```
<Context mapperContextRootRedirectEnabled="true">
```

Save and close the file.

In the same directory, open the file server.xml in a text editor and make sure that the complete block

```
<Connector port="8080" protocol="HTTP/1.1"
... />
```

looks like this:

```
<Connector port="8080" protocol="HTTP/1.1"
connectionTimeout="20000"
URIEncoding="UTF-8"
redirectPort="8443"
address="127.0.0.1" />
```

Save and close the file.

Find the entry "Configure Tomcat" in the start menu and open it:

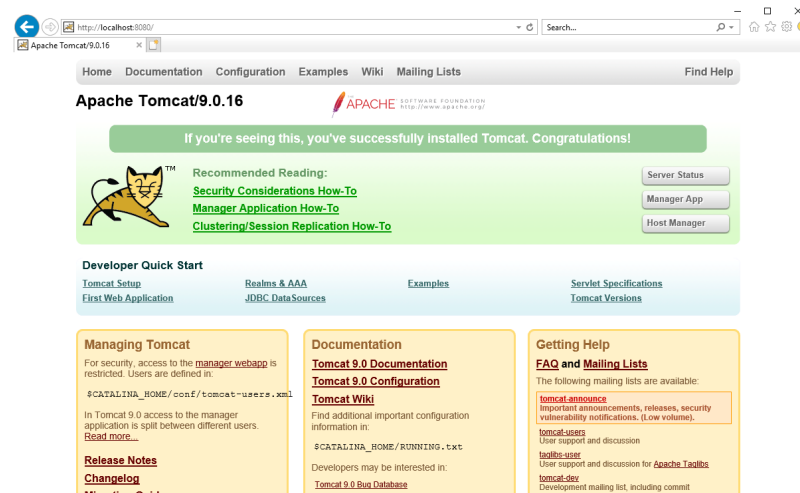

Set "Startup type" to "Automatic" (1) and start Tomcat (2). Then exit the configuration console (3):

Reviewing the installation

To check if Tomcat is working correctly, open the address `http://localhost:8080/` in a browser on the server.

You should now see the homepage of the Tomcat server:

Installing the web apps

[[File:{{{file}}}]] **Please unzip the installed BlueSpice folder and move the subfolder to C:\center]]** **\bluespice\var\www. Rename the folder to "w".**

After the successful installation of BlueSpice, please follow the next steps to install the web services and activate the respective BlueSpice extension:

- [PDF-Export](#)

Next step

If you have completed all steps successfully, you can delete the previously downloaded "apache-tomcat-10.0.11.exe" file from your hard drive and continue to the next step "[Elasticsearch](#)".

Elasticsearch is available up to BlueSpice 4.3. Newer versions of BlueSpice 4 support [OpenSearch](#).

Contents

1	Download	12
2	Unpacking the ZIP archive	12
3	Installing the plugin ingest-attachment	13
4	Installing the Elasticsearch service	14
5	Configuring and starting the Elasticsearch service	14
6	Next step	16

Elasticsearch is a prerequisite for running Advanced Search. The steps listed here are optional and only required if you plan to use them in your BlueSpice installation.

To run Elasticsearch, OpenJDK is required. If you have not installed it, [install it now](#).

Download

The content of this section refers to external sources and is current at the time of writing this documentation. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

BlueSpice ist derzeit mit Elasticsearch 6.x ab Version 6.8.21 kompatibel. Elasticsearch > 6.8.x wird derzeit nicht unterstützt.

Die jeweils aktuelle Version können Sie [dieser Liste](#) entnehmen. Daraus ergibt sich folgender direkter Download-Link: <https://artifacts.elastic.co/downloads/elasticsearch/elasticsearch-<Versionsnummer>.zip> also bspw. <https://artifacts.elastic.co/downloads/elasticsearch/elasticsearch-6.8.23.zip>.

Folgen Sie dabei den Download-Anweisungen Ihres Browsers.

In the following, the Elasticsearch version 6.8.23 is used and only serves as an example for the latest version of the 6.x version series, which you can download at the time of your installation.

Unpacking the ZIP archive

Unpack the ZIP archive that you have just downloaded in a Archiv in a suited system path of your hard drive.

This documentation assumes the [folder structure recommended by us](#). For

Change to the directory "C:\bluespice\bin\elasticsearch-6.8.23\bin" (1).

Right-click on a free area of the Explorer window with the Shift-key pressed.

Click "Open PowerShell window here" (2):

19.04.2024

Run the "elasticsearch-service.bat install" command and wait for the process to complete:

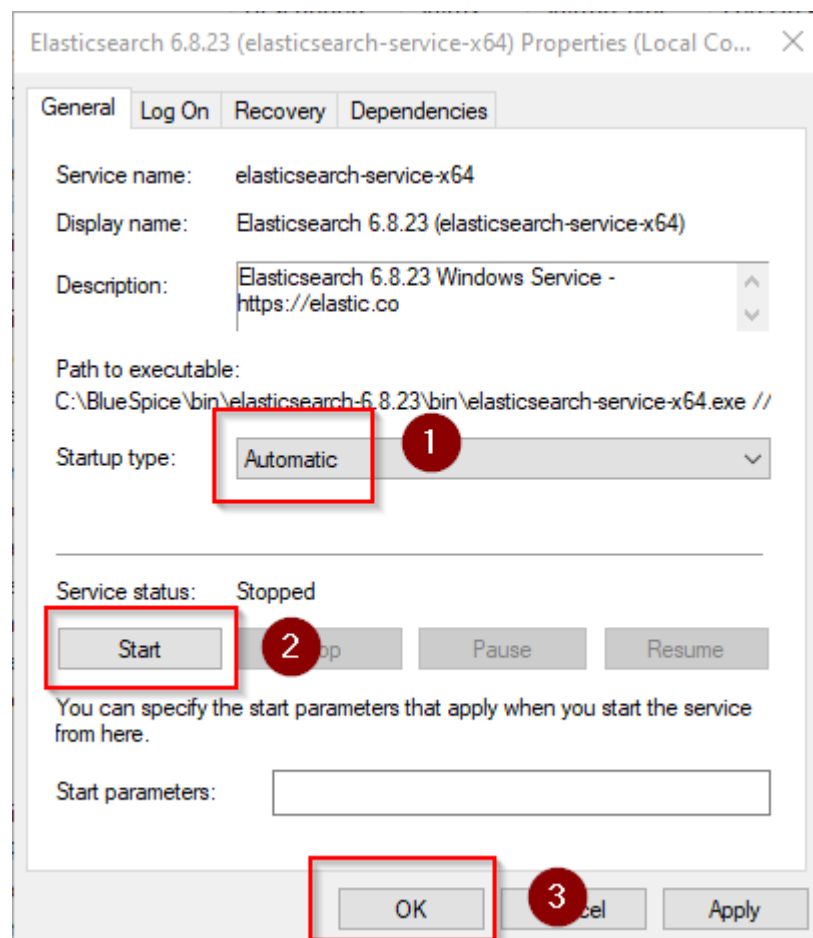

Enter "services.msc" (1) in the dialog window and **click** "OK" (2):

Select the startup type "Automatic" (1) and start the service (2).

Click "OK" (3) to close the window after the service is started:

Next step

If you have successfully completed all of the above steps, proceed to the next step: [Python](#).

4	Next step	20

OpenJDK is a prerequisite for operating the Extended Search and the PDF export. The steps listed here are therefore optional and only required if you want to use one or more of these services in your BlueSpice installation.

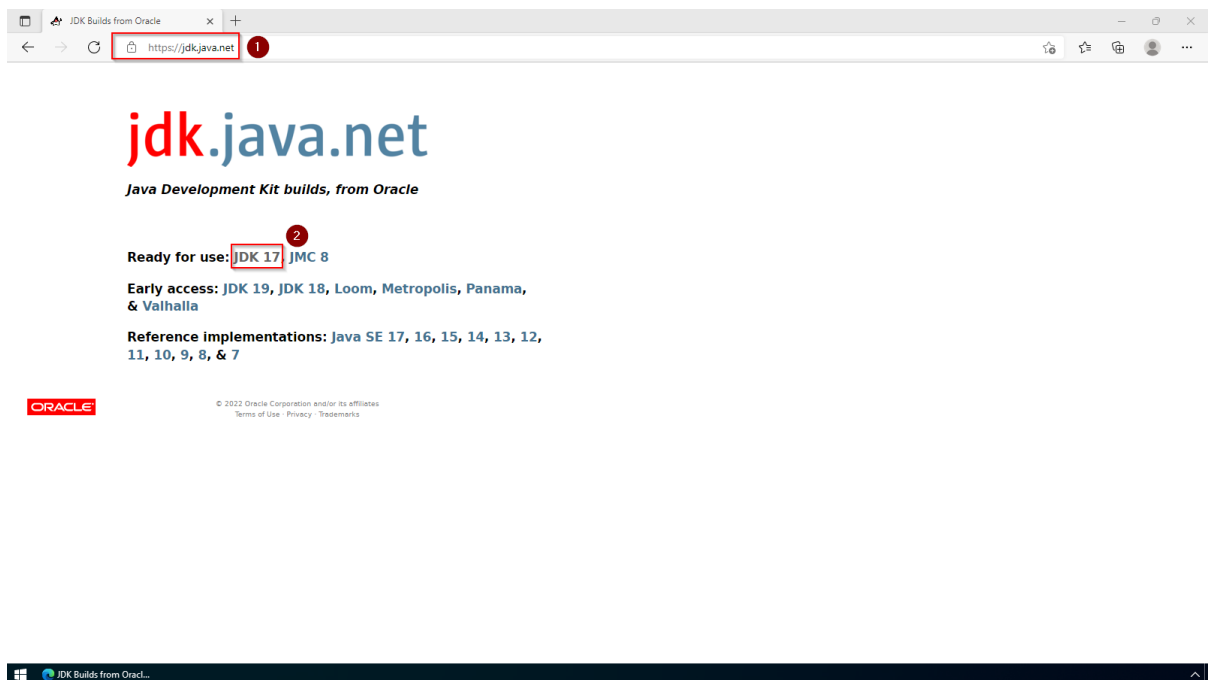

In the following documentation, we work with OpenJDK in version 17.0.2, the current version at the time of writing. You can also use other versions as long as they meet the system requirements we have published. Please note that you then have to adjust the information in this documentation accordingly.

Download

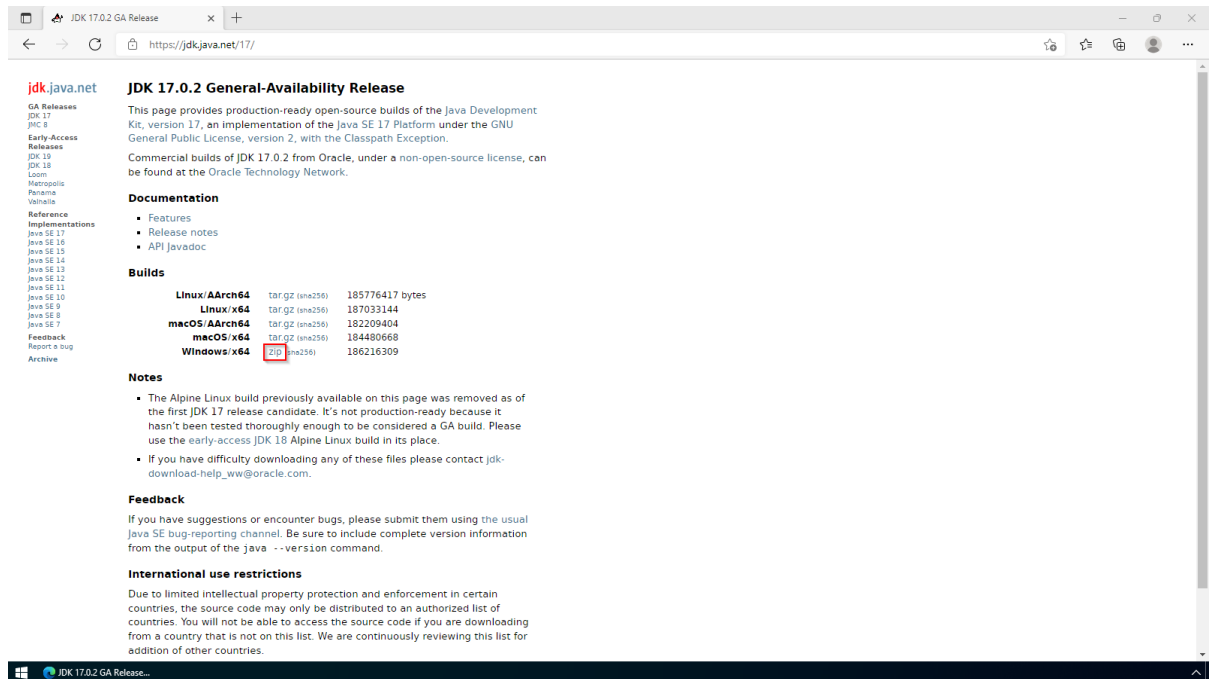

The content of this section refers to external sources and is current at the time of writing this documentation. We cannot guarantee how long these sources will remain unchanged. Please let us know if you notice any discrepancies to the information provided here.

Open the [official website at java.net](https://jdk.java.net) (1) and **click** "JDK 17" (2):

Download the ZIP archive for Windows:

Unpacking the ZIP archive

This documentation is based on the [folder structure recommended by us](#). If you want to adjust this individually, you have to adjust the paths yourself according to your own level of knowledge.

Unpack the downloaded ZIP archive to `C:\BlueSpice\bin`. The file structure `C:\BlueSpice\bin\jdk-17.0.2` should be the result.

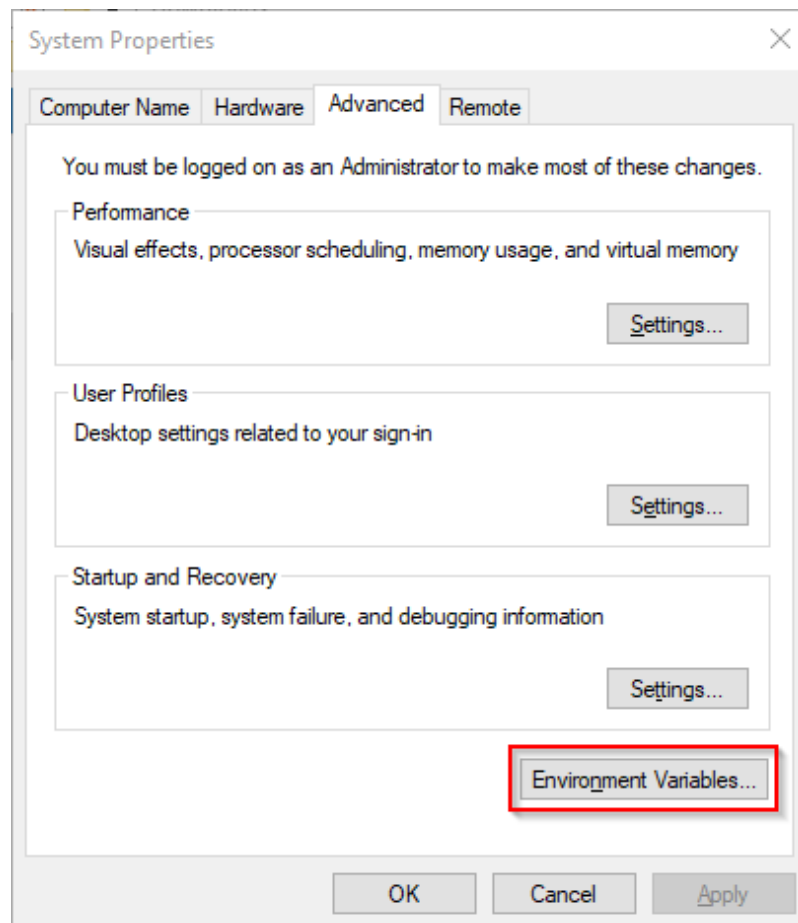

Setting the environment variable

Enter the key combination Windows+R.

Enter "SystemPropertiesAdvanced.exe" (1) in the dialog window and **click** "OK" (2):

Click "Environment Variables...":

Click "New...":

Set the variable name to "JAVA_HOME" (1), and the variable value to the directory of your OpenJDK installation that you just copied to *C:\bluespice\bin* (2).

You can use the "Browse directory" button (3) for that.

Click "OK" (4):

Close all newly opened windows one after the other by clicking "OK".

Next step

If you have successfully completed all of the above steps, proceed to the next step: [Apache Tomcat](#).

1 Moving the BShtml2PDF Application	22
2 Checking the functionality	22
3 Enable PDF Export in BlueSpice	22
4 Installing BlueSpice 3 with installer	23
5 Troubleshooting	24
6 Download Web services	24

Make sure that the [Apache Tomcat server](#) is completely installed and configured on the BlueSpice server before setting up PDF-Export.

Moving the BShtml2PDF Application

Important! Starting in BlueSpice 4.x, BShtml2 is no longer in the distribution and has to be downloaded and installed separately.

Download: <https://bluespice.com/filebase/html2pdf/>

Download the file "BShtml2PDF.war" and copy it to `<tomcat-webapps>`

The default paths are as follows:

- C:\Program Files\Apache Software Foundation\Tomcat 10.0\webapps (**Apache Tomcat on Windows**)
- /var/lib/jetty9/webapps (**Jetty on Debian**)

Or run the command `sudo mv /var/www/bluespice/w/extensions/BlueSpiceUEModulePDF/webServices/BShtml2PDF.war /var/lib/jetty9/webapps` in the terminal. (**Linux**)

The application usually starts automatically without the need for rebooting the application server.

Checking the functionality

The correct functionality of the BShtml2PDF service can be checked as follows:

On Windows, open Internet Explorer using the URL `http://localhost:8080/BShtml2PDF`. With correct functionality, you should see the following website:

Enable PDF Export in BlueSpice

Go to the directory `<installpath-bluespice>/settings.d`. Open the file **020-BlueSpiceUEModulePDF.php** in a text editor.

Or open the 020-BlueSpiceUEModulePDF.php in the terminal using the command `sudo nano /var/www/bluespice/w/settings.d/020-BlueSpiceUEModulePDF.php`. (**Linux**)

In the second line is the code to activate the extension:

```
return; // Disabled. Needs Tomcat
```

You can either add a comment character (#) to the beginning of this line or delete the line completely, save the file and exit it.

Note: Give the user "Everyone" full access to the Temp folder under C:\Windows.

Installing BlueSpice 3 with installer

1. Open `localhost/w` in your Browser and follow the [instructions](#).
2. For BlueSpice WikiFarm, move the .htaccess and web.config files to C:\bluespice\var

Open a command line and change into the folder `<installpath-bluespice>`. Execute the following command:

```
php maintenance/update.php (Linux)  
php maintenance\update.php (Windows)
```

Note: In Windows, make sure that the environment variables are set correctly to access the "php" command.

Note: Note that you must update the [file system permissions](#) after running update.php.

When the script is finished with the "Done" message, you have successfully installed the web service .

```
...event_agent field does not exist in echo_event table, skipping modify field patch.
Modifying event_variant field of table echo_event ...done.

Done 0 files in 0.0 seconds
Updating * from namespace fields in links tables.
...doing page_id from 1 to 200
Purging caches...done.

Done in 1.6 s.
root@bluespice:/var/www/bluespice#
```

Troubleshooting

If there is a problem with the PDF export in BlueSpice, first check the [file system permissions](#).

Download Web services

If the required war-file is missing in your installation package, you can download it here:
[Webservices](#).
