### Contents

<b>1</b>	<b>Terms of use</b>	.....
1.1	Changing the link targets	.....
<b>2</b>	<b>Account deletion or anonymization</b>	.....
2.1	Request to administrators	.....
2.2	Direct action by users	.....

## Terms of use

### Changing the link targets

The link target of the terms of use is stored in system messages and can be changed by administrators if necessary.

The screenshot shows a login interface with a yellow box containing the text: "To continue, please accept the following terms". Below this are two checkboxes: "I accept the [privacy policy](#) of this site" and "I accept the [terms of service](#) of this site". A blue "Continue login" button is positioned below the checkboxes. The text "Terms of service" is visible at the bottom of the form area.

Link	Link target	Standard target page	System message (standard)	System message (cloud)
<b>privacy policy</b>	MediaWiki: Privacypage	Project: Privacy policy	"privacypage": "Project: Privacy policy"	"bs-cloudclient-privacypolicypage": "Project: PrivacyPolicy"
<b>terms of service</b>	MediaWiki: Termsofservicepage	Project: Terms of service	"termsofservicepage": "Project: Terms_of_service"	"bs-cloudclient-termsofservicepage": "Special: TermsOfService"

## Account deletion or anonymization

### Request to administrators

When a request for anonymization or account deletion is made, users in the sysop group will receive an email notification. The action can then be carried out using the corresponding icons at the end of the request:

- Grant request (click green tick)
- Reject request (click on red crossed out circle)

[link=https://de.wiki.bluespice.com/wiki/Datei:Handbuch:review%20privacy%20request.png](https://de.wiki.bluespice.com/wiki/Datei:Handbuch:review%20privacy%20request.png)  
Action requests

## Direct action by users

The wiki can be configured so that users can perform these actions immediately without approval from an administrator first (not possible in BlueSpice Cloud). Requesting actions applies to:

- anonymization
- account deletion

Immediate action can be configured as `$ bsgPrivacyEnableRequests = false;` be activated in *LocalSettings.php*.
