## BlueSpice 3.1.1

---

BlueSpice 3.1.1 is a patch release. This is a stable release.

## Changelog

---

### ▪ **FlaggedRevsConnector: align colors for highlighting draft in version history** (#5683)

FlaggedRevs used various colors to highlight draft revisions in the version history. This is now aligned to the BlueSpice color scheme.

### ▪ **Fix links to documentation** (#13552)

Some extensions in "Special:Version" pointed to outdated documentation. The links are now fixed.

### ▪ **Privacy: Change avatar after anonymisation** (#14216)

Avatar was not recreated after anonymisation and two parameters (\$4 and \$5) were not resolved in the anonymisation log. This is now working.

### ▪ **SocialEntities show up in watched pages** (#14681)

In the watched pages list and in SmartList, SocialEntity entries were listed. Now they are excluded, since all items must contain wikitext.

### ▪ **Indexing huge PDFs fails** (#15725)

In some cases, long documents were not indexed at all due to length limits. There is now a fallback: in this case, only the filename is indexed.

### ▪ **Ping request should start immediately on page-load** (#16467)

Long ping intervals caused delays and a "Someone is editing the page" message. Now the ping starts directly after page load which allows for more granularity of ping intervals and reduced load on the server.

### ▪ **Namespace select box in Special:CategoryTree is overlapped by header** (#16534)

On the page "Special:CategoryTree", some namespaces could not be selected. Now, the selection box correctly overlaps the header.

▪ **Privacy policy links should link to project namespace (#16594)**

Links from Privacy Center to privacy policy pages pointed to a non-standard page. Now, the default link points to the standard privacy policy page of the wiki.

▪ **VisualEditor table inspector UI is broken in BlueSpice free (#16612)**

The table inspector only showed icons, but no text and the icons were misaligned. The proper UI is now restored.

▪ **AND OR operators must work in search term (#16613)**

The keywords AND and OR were not evaluated in SearchCenter. This is now possible.

▪ **Wrong link for "Add attachment" (#16629)**

The link to the attachment page of an article was broken. It now works again.

▪ **Table formatting is lost on change between edit modes (#16639)**

Table color formatting was lost when switching between Visual and WikiText mode. Now, the color formatting is preserved.

▪ **HideTitle should also hide FlaggedRevs information (#16738)**

When using HideTitle on a page, the page revision status notification was still visible. Now, the entire title section gets disabled.

▪ **Use SSL link to bluespice.com in code documentation (#16789)**

Many URLs in the code documentation of the source code pointed to "http:" instead of "https:", but user interface links were already set to "https:". Now, a secure connection is suggested everywhere.

▪ **Subitems in header menu are displayed all the time (#16808)**

The second-level items of the header menu were expanded and could not be collapsed under certain circumstances. They are now collapsed and always collapsible.

▪ **ExtendedStatistics special pages ignores permission statistic-viewspecialpage (#16951)**

Statistics could be viewed by anyone with read rights. Now, the page requires a special right, which per default is assigned to the admin role.

▪ **Add attachments button out of line (#16993)**

In some cases, the "Add attachment" button was vertically misaligned. This is now fixed.

▪ **Remove dependency to PHP Tidy extension (#16997)**

The PHP extension 'tidy' is no longer maintained or bundled in some distributions (e.g., SLES). The dependency on that extension was removed and replaced by an onboard MediaWiki solution.

▪ **Smartlist fatal error in mode whatlinkshere when no target given (#17008)**

The smartlist tag was throwing an error when the attribute "target" was not set. Now, the attribute can be omitted safely.

▪ **Privacy: fix gender in anonymisation log (#17015)**

The log message of an anonymized user was always male gendered. The log message is now gender neutral.

▪ **Attachments can not be searched when there are external locations (#17031)**

Search indexing stopped overall when an external location could not be reached. Now, it just ignores that particular location.

▪ **Update repo file on WebDAV update (#17069)**

Repo files are now re-indexed when they are updated via WebDAV

▪ **Add article button is displayed in mobile view when left sidebar is open (#17077)**

The button had a wrong z-index, placing it above the menu. The z-index was fixed and now the button works correctly.

- **BlueSpiceAvatars needs 'editToken' replaced with 'csrfToken'** (T233546 )
- **BlueSpiceExtendedStatistics needs 'editToken' replaced with 'csrfToken'** (T233547 )
- **BlueSpiceFoundation needs 'editToken' replaced with 'csrfToken'** ( T233548 )
- **Checkup code passing \$this by reference with a temporary variable** ( T234118 )
