Starting with BlueSpice 4.4, it is possible to create tasks by default. Therefore, importing this template is no longer necessary.

This template creates action points that can be included on meeting minutes or other wiki pages. In addition, an overview page of all open tasks is included.

It requires SemanticMediaWiki (included in BlueSpice pro).

📩 Download
Action points on a page:
S MMiller > Write sales report for Q2/2021 > open > Due: 2021/07/30
Schneider > Organize next staff meeting topics > closed > Due: 2021/07/14
RMarkwardt > Review hiring plan > closed > Due: 2021/07/15 Comment: Reviewed and uploaded to wiki

All open action points in the wiki:

Status 🔺	User	Aufgabe	🔷 Fälligkeit	Seite
pen	MMiller	Write sales report for Q2/2021	30. Juli 2021 ^L	Minutes-2021-06-30
pen	Evogel	Plan marketing Lunch and Learn	27. Juni 2021 ^L	Minutes-2021-06-30
pen	Rheigl	Present sales numbers to staff	27. Juni 2021 ^L	Minutes-2021-06-30

Importing the template

The import file is included in the archive file *HW-Action points.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-Action points.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Action points
- Template:Action points/styles.css
- Action points list(Page in the main namespace)
- Property:Ap-duedate
- Property:Ap-name
- Property:Ap-status
- Property:Ap-description

Using the template

- 1. Add the template from the VisualEditor insert-dialog.
- 2. Fill in the form fields as needed.

Note: If, after importin the template to your wiki, the input fields are not displayed when you first integrate it into a wiki page, you need to open the template in the template namespace, make a change (e.g. insert spaces) and save the template. The input fields should now be displayed correctly.

Starting with BlueSpice 4.3, an identical template "Bannerbox" is already preloaded. Therefore, importing this template is no longer necessary.

This template creates a page banner that you can include on portal pages, for example. You can see an example here in the Helpdesk on the page Community.

Templates download

Importing the template

The import file is included in the archive file *HW-banner.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-banner.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file ...

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Banner
- Template:Banner/styles.css

Creating a banner

1. From the Visual Editor *Insert > Template* menu, add the template "Banner".

<u>4</u> ~	℃ Cite ∨	i≡∨ Inse	rt ~ Ω			?	
	Cancel		Add a tem	plate		Insert	
	🛥 Add a ter	nplate					
	bann				Add templ	ate	
_	Banner						-
/ac	Banner/style	S.CSS					ce
	Show options						
Inse	rting the tem	plate throug	h VisualE	ditor			

2. Click on the inserted template to view the available parameters for formatting the look of the banner.

Cance	l Banner	Apply changes					
The "1	 emplate:Banner" template doesn't yet have a de	scription, but					
	night be some information on the template's page

Latest revision as of 13:57, 4 August 2023

This template allows to embed the Table of Contents of a book on any wiki page. It can be inserted into a wiki page via the VisualEditor *Insert > Template* menu.

Importing the template

The import file is included in the archive file HW-Bookchapters.zip. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *hwBookchapters.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Bookchapters
- Template:Bookchapters/styles.css

Using the template

- 1. **Insert** the template from the Visual Editor.
- 2. **Enter** the title of the book.
- 3. Click Apply changes.

1. Introduction
2. Organizational structure
2.1. Organization chart
2.2. Substitute arrangements
3. Operational organization
4. Management instruments
4. 1. Quality management
4.2. Risk management
look chapters on a wiki page

The table of contents is now displayed on the page.

Note: It is not possible to collapse the sub-chapters.

1 Starting with BlueSpice 4.3, these button links can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template creates a link that is styled as a button. It can be inserted into a wiki page via the VisualEditor *Insert > Template* menu.

	📩 Downloa	ad
These are links - sty	led as a button:	
Go to website	View projects	Show deleted page

Importing the template

The import file is included in the archive file *HW-ButtonLink.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-ButtonLink.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Important! The input fields for the template parameters are usually not automatically available after importing the template to your wiki . You have to open the imported template file and make an edit (e. g., add a space and then save the page) to activate the template data functionality. The input fields should now be displayed correctly when you use the template on a page.

Pages included in the import

The xml import creates the following files in your wiki:

• Template:ButtonLink

Using the template

- 1. Add the template from the VisualEditor insert-dialog.
- 2. Fill in the form fields as needed.

Contents

1 Importing the template	18
2 Preparation	
3 Usage	19
3.1 Create event	19
4 Pages included in the import	20

Importing the template

The import file is included in the archive file *HW-Calendar.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose HW-Calendar.xml.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. Keep the selection Import to default locations.
- 4. Click Upload file

The template is now available in your wiki.

Preparation

Important! The appointments are created in the Events namespace by default. Make sure it exists in your wiki before creating an event. The following settings need to be activated:

- Subpages
- Content namespace
- Visual editor
- Semantic MediaWiki

Cancel	Edit namespace Done
Namespace name:	Events
Alias:	
Subpages	
Content namespac	e
CategoryCheck	
Secured page assig	gnments
PageTemplates	
✓ Visual editor	
Rating	
Recommendations	
Read Confirmation	
Semantic MediaWil	ki
Approval	
Events namespace	settings

If you want to use a different namespace, the form fields in the source text of the main calendar page must be adjusted accordingly: Change the parameter namespace=events on the page "Calendar" as needed.

{{#forminput:form=Event|query string=namespace=events}}

Usage

It is not possible to create an event page as a recurring event. An event page can however have multiple subentries with their own dates. These subentries are also shown on the calender.

Create event

- 1. Go to the page Calendar (via the search or the browser address bar).
- 2. **Create** a new event using the *Create new event* input field. Enter a suitable page name here (e.g. Summer festival 2022).
- 3. **Fill out** the event information form.
- 4. Save the form.

If you want to add more dates to the event that should also appear in the calendar overview (e. g., a date to prepare for the summer festival), you can edit the page again:

Edit source
Edit
New section
Edit with form
Edit an event

- 1. **Switch** to form-editing mode on the event page.
- 2. Click Add another entry.
- 3. Activate the "More info" checkbox if you want to create an additional subpage for the entry (e.g., for event planning).
- 4. **Save** the page. If you have activated the "More info" checkbox, the event name is now displayed as a link to a subpage.

Pages included in the import

The xml import creates the following files in your wiki:

- Calendar
- Template:Calendar
- Template:Calendar/styles.css
- Template:Event
- Template:EventSub
- Template:EventlistEnd
- Template:EventlistRow
- Template:EventlistStart
- Form:Event
- Form:Events
- Property:Event/End
- Property:Event/Eventname
- Property:Event/Participants
- Property:Event/Start

Templates download/Employee: Difference between revisions

Latest revision as of 15:47, 11 May 2023

This template creates an employees gallery that you can include on portal pages, for example.

Importing the template

Importing the template

The import file is included in the archive file HW-Employee.zip. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-Employee.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Employee
- Template:Employee/styles.css

Creating the employee gallery

You can add each individual employee card as a template. Alternatively, you can add a "batch" of employees directly in the source mode of the page.

1. From the Visual Editor *Insert > Template* menu, add the template "Employee".

×	Add a template	Inser
Add a template		
Employ		Add template
Employee		k
Employee/styles.css		
how options		

2. Provide the necessary information in the parameter fields.

Adding a "batch" of employees

To speed up the process, you can quickly add the template multiple times directly in the source editing mode. This also allows you to add a colored grey wrapper around the gallery:

```
<div style="background:#e9e9ee">
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
</div>
```

Available parameters

	Element	Value	Description
1	title	text	Job title
2	image	file name (without naemspace prefix)	Name of the uploaded user image (e. g.: lastnamefirstname.png). If left empty, the template looks for the profile image of the user.
3	name	text	Name of the employee
4	department	text	Department of the employee
5	username	username (without namespace prefix)	If the user exists in the wiki and the user name is provided, the employee card links to the user's profile page.
6	employeepage	name of a wiki page	If the employee does not exist as user, an employee page can be created anywhere in the wiki. If a page name is provided here, the employee card links to that page.

Included templates

This set contains the forms, templates, and overview pages for the following document types:

• Process description

- Work instruction
- Role definition
- Audit report

Supported norms

Out-of-box, the following standards are supported:

- ISO 9001:2015
- ISO 14001
- ISO/IEC 27001
- ITIL 3/4

These standards can easily be expanded or replaced by other standards.

Importing the template files

Detailed instructions for importing and using the template set are included in the archive file (. *zip*) as a PDF.

Starting with BlueSpice 4.3, icons can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

Starting with BlueSpice 4.3, these button links can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template makes it possible to insert Bootstrap icons on a page.

Importing the template

The import file is included in the archive file *HW-Icon.zip*. Unpack the zip file first.

On the page *Special:Import,* follow these steps:

- 1. *Select file* and choose HW-lcon.xml.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Pages included in the import

The xml import creates the following file in your wiki:

• Template:Icon

Using the template

Important! BlueSpice does not always include the latest version of bootstrap icons. See the list of currently supported icons.

1. **Find** a bootstrap icon from the Bootstrap website at https://icons.getbootstrap.com/**Click** on the icon you would like to use. The icon page shows you the class-name of the icon on the right side of the page:

cons / Award	
Award Tags: prize, rosette Category: Real world	Aha! Develop is a fully extendable agile development tool — customize how you work. Get started now. ads via Carbon
\sim	Download Download the SVG to use or edit. Download SVG
	Icon font Using the web font? Copy, paste, and go.
	<pre><i class="bi bi-award"></i></pre>
Examples	Code point Unicode: U+F154 CSS: \F154
♀ Heading	US: \uF154 JS: \uF154 HTML: 
Bootstrap icon css-class	

- 2. Highlight the class name (it has the format *bi bi-myicon*) and **copy** it to your clipboard (ctrl+c).
- 3. **Go back** to your wiki page.

BlueSpice

- 4. **Enter** {{ in visual editing mode at the cursor position where you want to insert the icon. The template editor opens.
- 5. **Copy** the icon class from your clipboard:

×	Icon	Apply	/ changes
Icon css (class *	í	<u>^</u>
bi bi-awa	ard	*	
Font-size	9		- 1
e.g. 0.9e	m; 1.5em		- 1
Color			- 1
#0059b3	3		. 1
Vertical	alignment		- 1
e.g. text-	bottom		
nplate editor			

- 6. **Change** the font size (optional) if you want the size to be different from the text surrounding it (e.g., from the size of a heading if the icon is placed in the heading or of the paragraph text if the icon is placed in the flow-text. Smaller than text icons are usually sized no smaller than 0.85em and larger icons up to 2.5em.
- Color: If you want the color to be different from the surrounding text, you can specify any web color (e. g., a color name like blue or a hex-valuesuch as #0059b3 for a more specific blue). A list of web colors can be found at https://www.w3schools.com/colors/colors_picker.asp
- 8. Vertical alignment: It should not be necessary to provide an alignment value. The standard is set to text-top and usually works in headings and in flow-text. If it looks a little off, you can try other vertical-alignment values, such as text-bottom. For a full list of possible values, see https://www.w3schools.com/cssref/pr_pos_vertical-align.asp.
- 9. Click Apply changes.

The icon is now displayed on the page.

3.2 Image cards	32
3.2.1 Standard-sized image cards	33
3.2.2 Large image cards	33
3.3 Icon cards	34
4 Available settings	35
4.1 Template:Image_cards/start	35
4.2 Template:Image_cards	35

Importing the template

The import file is included in the archive file *HW-lamgeCards.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-ImageCards.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file ...

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Image_cards
- Template:Image_cards/start
- Template:Image_cards/end
- Template:Image_cards/styles.css

Adding image cards to a page

General considerations

- **Start and end templates:** Each card set needs the **start** template (Image cards/start) and the **end** template (Image cards/end). Make sure to add the end template right after the last image card without a line-break. If you have a line break, you will see some unnecessary space after the last card.
- **Card sizes:** You can choose between *medium* (*standard*), *small* and *large* image cards. By default, standard cards are shown.
- **Images or icons:** You can choose to create image cards or icon cards. Icon cards are only available in the sizes *small* and *medium.* If you want to uses images, you need to upload them to your wiki first.

See below for a complete list of available settings (template parameters).

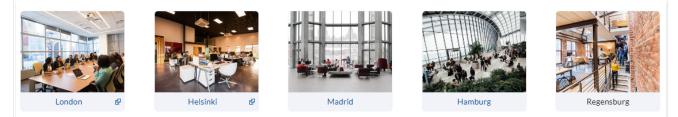

Image cards

The easiest way to add card is to choose a starting layout from the examples provided on this page. Simply copy and paste the example code in source-editing mode into your page.

Important! Always paste any code using plaintext - **Ctrl+Shift+v** - in your wiki in source editing mode to avoid creating unnecessary tags which will break the view.

Standard-sized image cards

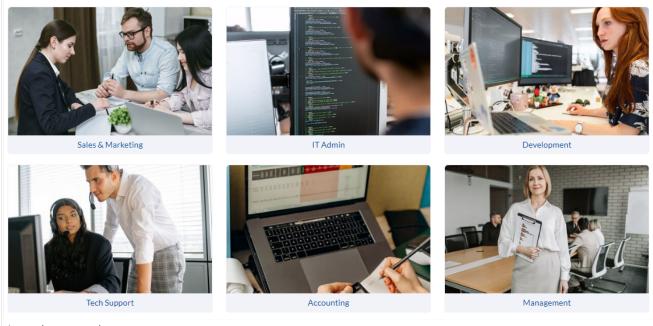

Standard-sized cards

Code to copy:

(Replace the file names for *imgname* = with the correct file names from your wiki)

```
{{Image cards/start|cardsize=}}
{{Image cards|imgname=yourimage1.jpg|label=London|imglink=https://google.de|alt=office
in London headquarters}}
{{Image cards|imgname=yourimage2.jpg|label=Helsinki|imglink=http://google.de|alt=}}
{{Image cards|imgname=yourimage3.jpg|label=Madrid|imglink=Main Page|alt=}}
{{Image cards|imgname=yourimage4.jpg|label=Hamburg|imglink=Main Page|alt=}}
{{Image cards|imgname=yourimage5.jpg|label=Regensburg|imglink=|alt=}}{{Image cards}
```

Large image cards

Large image cards

Code to copy:

(Replace the file names for *imgname*= with the correct file names from your wiki)

{{Image cards/start cardsize=large flexwrap=wrap}}
{{Image cards imgname=yourimage1.jpg label=Sales & Marketing imglink=Main Page}}
{{Image cards imgname=yourimage2.jpg label=IT Admin imglink=Main Page}}
{{Image cards imgname=yourimage3.jpg label=Development imglink=Main Page}}
{{Image cards imgname=yourimage4.jpg label=Tech Support imglink=Main Page}}
{{Image cards imgname=yourimage5.jpg label=Accounting imglink=Main Page}}
{{Image cards imgname=yourimage6.jpg label=Management imglink=Main Page}}{{Image cards
/end}}

```

Available settings

Blue Spice MediaWiki

Template:Image_cards/start

Parameter	Value	Description
cardsize	 medium (can stay empty, it is the default) small large 	Sets the size of the individual cards
justifycontent	• space-between (default)	Spreads the cards out evenly in the available space If the number of cards causes a line break and you don't want to switch from "space-between" to "flex-start", you can insert additional blank placeholder cards that "push" the cards in the second row to the left. You have to test the number of required placeholders. Here, 2 placeholders would be generated: {{Image cards class=placeholder}}
	• flex-start	If there is a wrap to another line, the cards are left-aligned
flexwrap	• nowrap (default)	Cards get smaller if many images are added to avoid wrapping
flexwrap	• wrap	Cards keep their original size. Images that don't fit on the first row will move to the next row. This setting should be used with cardsize=large.

Template:Image_cards

Parameter	Value	Description
e	•	Name of the image without a namespace prefix.

BlueSpíce

MediaWiki

Parameter	Value	Description
imgname	myimage.jpg, myimage. png	It needs to be blank or not present if icons are used instead of images.
label	e.g.: London	Label that is shown under the image /icon.
imglink	e.g.: Main_Page Help:Main_Page https://google.com	Link to a wiki page or a website. The link is optional.
alt	e.g.: office in London headquarters	Provided for assistive technologies of users who cannot see the image. This is not necessary when using icons, since icons are loaded as background images only.
iconname	e.g.: bi bi-lightbulb	Used instead of imgname if icons are used as a visual.
iconcolor	e.g.: Tomato, #607d8b	HTML-color value. This includes color names or generally HEX-values.

Templates download/Language switcher: Difference between revisions

Latest revision as of 10:26, 21 July 2023 (view source) Margit Link-Rodrigue (talk | contribs) No edit summary Tag: Visual edit

Latest revision as of 10:26, 21 July 2023

Starting with BlueSpice 4.3, a language switcher is automatically created for subpages or interlanguage links and this template is no longer needed.

This download file includes two versions of a language switcher. Supported languages can be defined in the templates.

volunteerism, health and wellness or all of these options

Importing the template

The import file is included in the archive file *HW-LanguageSwitcher.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-LanguageSwitcher.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. Keep the selection Import to default locations.
- 4. Click Upload file

The templates are now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Languages
- Template:Languages/styles.css
- Template:InterLanguages
- Property:Languages/tracklang
- MediaWiki:Lang
- MediaWiki:Lang/de
- MediaWiki:Lang/en
- MediaWiki:Lang/fr
- MediaWiki:Lang/nl

BlueSpice

Template:Languages

This template is used to switch between a page and its translated versions when the translations are maintained as subpages.

The template defines some variables to determine which languages you want to support. It automatically determines the content language of your wiki installation. **This variable "cl" is required and must not be deleted.**

• You need to define at least one language for the switcher to make sense. Each language variable is named as lowercase I (for language) "I1", "I2",.... The value needs to be provided as the ISO 639-1 language code for the language. For Spanish, you would define:

{{#vardefine:l4|es}}

• After defining the variables, you need to add them to the actual switcher:

{{#switch: {{SUBPAGENAME}}
|{{#var:l1}}={{#var:switcher}}
|{{#var:l2}}={{#var:switcher}}
|{{#var:l3}}={{#var:switcher}}
|{{#var:l4}}={{#var:switcher}}
|{{#var:clswitcher}}}

• A tracking property ensures that the different languages are available for further processing through Semantic MediaWiki. This allows to create page lists of the different languages.:

```
<!-- set tracking property //-->
[[Languages/tracklang::{{#switch: {{SUBPAGENAME}}|{{#var:l1}}={{#var:l1}}|{{#var:
l2}}={{#var:l2}}|{{#var:l3}}={{#var:l3}}|{{#var:l4}}={{#var:l4}}|{{#var:cl}}}]]
```

 Alternatively, especially in BluesSpice free (where no SMW functions and therefore no attributes are available by default), tracking categories can be used. These are commented out in the template by default. The comment must therefore be removed and all languages tracked as a category:

```
{{#switch: {{SUBPAGENAME}}|{{#var:l1}}=[[Category:{{#var:l1}}]]|{{#var:l2}}=
[[Category:{{#var:l2}}]]|{{#var:l3}}=[[Category:{{#var:l3}}]]|{{#var:l4}}=
[[Category:{{#var:l4}}]]|[[Category:{{#var:c1}}]]}
```

In addition, you should add the language to the template description for the extension TemplateData:

```
"description": {
    "en": "Language switcher",
        "de": "Sprachwechsler",
        "fr": "Sélecteur de langue",
        "nl": "Taal verandering",
        "es": "Cambiador de idioma"
}
```

Mediawiki

BlueSpice

Template:InterLanguages

This template is used to switch between a page and its translated versions when the translations are not maintained as subpages, but are technically not associated at all.

The template defines some variables to determine which languages you want to support. **The variable "self" defines the current page. It is required and must not be deleted.**

The language variables are defined just like in the template Languages. If you define additional language variables, the newly defined languages has to be added to the language menu. The links are created in the following container:

```
<div id="langbar-hz">
...
</div>
```

Simply add each language with the l-number matching your language variable by copying this line and replacing the number:

```
{{#if: {{{pgnamel4|}}}|{{#switch:{{{pgnamel4|}}}|{{#var:self}}=[[{{FULLPAGENAME}}{{!}}
{{#var:l4}}]]|[[{{{pgnamel4}}}{{!}}{{#var:l4}}]}}}
```

In addition, you need to add the language to the template description and the available fields in the TemplateData editor.

In source editing mode:

1. Click Manage TemplateData

Template:InterLanguages

check correct language associations	

Alignment of the language switcher

By default, the language switcher appears on the right side of the page. To display it on the left side, change the following line in the page Template:Languages/styles.css:

```
#langbar-hz {text-align: left;}
```

Adding the language switcher to a page

It is possible to use both language switchers in the same wiki. They connect language versions in different scenarios:

- Using the language switcher template Languages (for language versions that are maintained as subpages)
- Using the language switcher template **InterLanguages** (for language versions that are maintained as independent pages)

Templates download/Mention: Difference between revisions

Latest revision as of 15:55, 10 February 2022 (view source) Margit Link-Rodrigue (talk | contribs) (Created page with "<div class="downloadarea"> Download 361x361px|alt=screenshot of a mention</div> This te...") Tag: 2017 source edit

Latest revision as of 15:55, 10 February 2022

This template gives users a quick way of creating a user mention by simply typing {{ (opening the template dialog) and then selecting the template @ . Optionally, users can activate (email or wiki) notifications if they are mentionned on the wiki.

Importing the template

The import file is included in the archive file *HW-mention.zip*. Unpack the zip file first.

On the page *Special:Import,* follow these steps:

- 1. Select file and choose HW-mention.xml.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Important! If, after importing the template to your wiki, the input field is not displayed when you first integrate the template into a wiki page, you need to open the template in the *Template* namespace, make a "null-edit" change (e.g., insert spaces) and save the template. The input field should now be displayed correctly when using the template.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:@
- Template:@/styles.css

Using the template

- 1. Enter $\{\{$ in visual editing mode.
- 2. Choose the template @.

Cancel	Add a template	Insert
Add a template		
@	Add template	
@ Mention		
Jser selection		

3. Select a user name.

@ App	ly change
some additional information about the "@" te	mplate on
[[]]	í
	*
odrigue	
information	
	ame

4. Click "Save changes".

Activate notifications

Users can activate notifications for mentions in their personal preferences :

- 1. **Select** the tab *Notifications*.
- 2. Activate the notifications options for mentions.
- 3. Save your changes.

(No difference)

A

Latest revision as of 10:30, 21 July 2023

Starting with BlueSpice 4.3, these messages boxes can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template can be integrated into every wiki page from the editor toolbar (VisualEditor). The type of box (hint, tip, warning, etc.) can be specified as a parameter. This parameter sets the background color as well as the optional icon.

The symbol can be activated and deactivated.

	📩 Download
(3) Note: This is a note.	
Tip: This is a tip.	
Important! This is important.	
A Warning! This is a warning.	
C Example: This is an example.	
This is a neutral note.	

Contents

1	Importing the template	50
2	Available parameters	50
3	Pages included in the import	51
4	Alignment adjustments	51

Importing the template

The import file is included in the archive file *HW-messagebox.zip*. Unpack the zip file first.

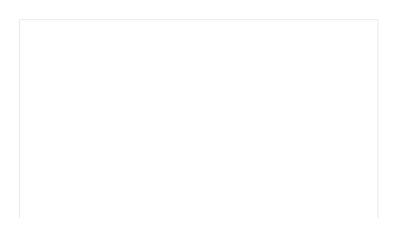

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-messagebox.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file... .

The template is now available in your wiki and can be added to a page from the VisualEditor *Insert>Template* link.

Available parameters

Parameter	Description
Type of box	Determines the color of the box and the label. Allowed values (case-sensitive): note, warning, tip, important, example, success, neutral
Note text	Content of the box. Allows wikitext.
Show icon	Sets an additional icon for the box type. Default value: (empty), Allowed value: yes
Background color	overwrites the default background color of a boxtype. Example: #ef5f5f5 (light grey) To find a color: https://www.w3schools.com/colors/colors_picker.asp

There	might be some addi	tional information about	the "Messagebox"
templa	ate on its page.		
-	Type of box st		í
	note		*
:	Show icon		
	yes		
I	Note text *		
	This is a note.		*
E	Background colo	r	
	e.g. #ececec		
Show	options		

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Messagebox
- Template:Messagebox/styles.css

Alignment adjustments

By default, the box is displayed in full-width. This means that it is displayed below any image that is used directly before the box.

To change this behavior to keep the box within the text-flow you can make the following change in Template:Messagebox/styles.css:

For the css-selector *.hw-messagebox*, **replace** the declaration "clear:both" with "overflow: hidden".

Before:

```
.cd-textbox {
...
clear:both;
}
```

Afterwards:

.cd-textbox {
...
overflow hidden;
}

Page

template for customer project meeting meetings.

Importing the template

The import file is included in the archive file *HW-Minutes-customerprojects.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-Minutes-customerprojects.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The form-based template is now available in your wiki.

Pages included in the import<

• Template:Meeting minutes customer projects

Using the template

You can define this template as a page template in your wiki if you have administrator rights. If you have also downloaded the general template for team meeting minutes, you can also define this template to be preloaded as such a team template.

Templates download/Minutes for teams: Difference between revisions

Importing the template

The import file is included in the archive file *HW-Minutes.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-Minutes.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file... .

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Meeting minutes (in the *Main* namespace)
- Template:Meeting minutes
- Template:Meeting minutes/styles.css
- Template:Meeting minutes standard

Using the template

Create a namespace

Over time, you will create many pages for meeting minutes. It therefore makes sense to store them in their own namespace. We suggest that you create the "Minutes" namespace for this purpose. The template for minutes requires that this namespace is available.

If you do not want to use the "Minutes" namespace in your wiki, you can adjust the expected namespace in the file *Template:Meeting minutes*. To do this, change the prefix *Minutes* in the *inputbox* tag:

```
{#tag:inputbox|
...
prefix=Minutes:{{{1|{{PAGENAME}}}}}/
```

to your own namespace, here exemplified as Your_namespace:

```
{#tag:inputbox|
    ...
    prefix=Your_namespace:{{{1|{{PAGENAME}}}}}/
```

Add a navigation link

To easily find and create meeting minutes, you should provide a direct link to the Minutes roll-up page in the main navigation. By default, the page *Meeting minutes* is located in the main namespace. You can move it to any namespace you want.

Customizing the template

Creating individual teams

Three adjustments need to be made for each team section on the main *Meeting minutes* page:

- 1. The **box heading** with the team name.
- 2. **The team name** used to create the file path for this team's minutes. This generates the main page prefix used for any meeting time for this team before the date. For example *Marketing*/2021-07-01.
- 3. The **page template** you want to use for the team's meeting minutes. By default, there is only one template (Meeting minutes standard) for all meeting minutes. Simply create a new page in the template namespace and assign it here as a preload template for a team.

Example of a team:

```
<div class="block">
== My team==
{{Meeting minutes|My team|preload=Template:Meeting minutes my team}}
</div>
```

Result:

021-07-02	New page
My team/2021-05-25	

Templates download/PortalFlex: Difference between revisions

Latest revision as of 16:22, 28 March 2022 (view source) Margit Link-Rodrigue (talk | contribs) No edit summary Tag: Visual edit

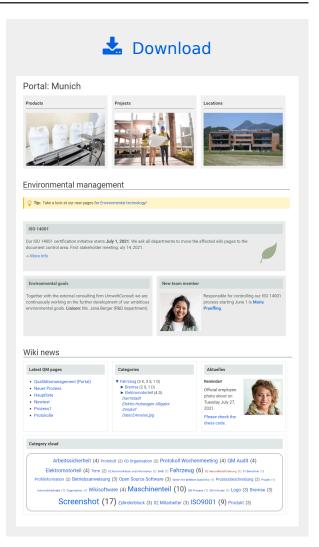

Latest revision as of 16:22, 28 March 2022

The template *Portal flex* allows you to create pages based on a 2 or 3 column layout. In addition, each page can contain an intro section.

Individual pages that were created using this *Portal flex* template can be combined into one portal page using transclusion. (as shown in the **example image** on this page).

The layout is responsive and shown optimized for different devices.

Importing the template

The import file is included in the archive file *HW-PortalFlex.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-PortalFlex-en.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The form-based template is now available in your wiki.

Creating portal pages

To create a portal page:

- 1. Add the page Template:Portal flex PT as a page template to your wiki.
 - 1. Go to the template manager at *Special:PageTemplatesAdmin*.

Blue Spice MediaWiki

- 2. Click the "+" button to add the template as a new page template for the entire wiki:
 - Template name: Portal page
 - Description: Generic portal page
 - Namespace: (all)
 - Template:Template:Portal flex PT

Cancel	Add template Done
Template name:	Portal page
Description:	Generic portal page
Namespace:	(all) \times \checkmark
Template:	Template:Portal flex PT 🗸 🗸
Adding the Portal t	emplate to the wiki

2. **Create** a new wiki page. You should now have the template Portal page available for selection.

My new page	
Empty page Start with an empty page.	
General	
Portal page Generic portal template	
Selecting the portal page template	

3. Save the new page.

My new page

	\sim \odot Cite \checkmark \equiv \checkmark Insert \checkmark Ω	? 🛦 \Xi 🌶 ~ 🚫 Save pag
Box 1 Add your content.	Box 2 Portaltest Category:1-Wiki Template:IMS Process/SMW IMS:Process descriptions Template:IMS Audit/SMW IMS:Contract process Template:Uselangtest Main Page/en	Box 3 Your content here.
Box 4 Content here.		

- 4. To **edit the form settings** or to add simple text or graphics, click "...all actions" in the page tools and then click Edit with form. After changing the settings as needed, save the page. If you want to add dynamic content such as SMW-queries, you need to click "Edit source" instead of "Edit with form".
- 5. **Create** new boxes in forms edit mode by clicking *New box* and add your content. You can move the boxes up or down in order once you have multiple boxes. You can also override the default background color for an individual box. For example, if you selected white or grey for the default color of your boxes, you can emphasize an individual box by giving it a blue or red background color. You can also hide the heading of an individual box.

	 Neuer Prozess Hauptliste Newtest Prozess1 Protokolle 	
Heading:	Kategorien	<u>3</u> Ø 8

6. **Choose,** if necessary, the number of placeholders (1). If, for example, you have chosen a 2-column layout, but you have 3 boxes on the page, then the 3rd box, by default, is shown in full page width. If you select 1 empty placeholder box, then the 3rd box will use only 1/2 of the page width.

	ce	Templates download
Media	Wiki	
	Neue Box	
	1 Leere Boxen am Ende hinzufügen:	
	Seite speichern Vorschau zeigen 2 pbrechen	
F	Placeholder for unused columns to distribute available width.	

- 7. Click Show preview (2). Here you can check your previous settings. Then scroll to the bottom of the page to get back to the form.
- 8. Click Save page when you have finished your edits.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Portal flex/Start
- Template:Portal flex/Box
- Template:Portal flex/End
- Template:Portal flex/styles.css
- Template:Portal flex PT
- Form:Portal flex

Templates download/SVG: Difference between revisions

Latest revision as of 12:19, 3 March 2022 (view source) Margit Link-Rodrigue (talk | contribs) No edit summary Tag: 2017 source edit

(No difference)

Latest revision as of 12:19, 3 March 2022

Note: This template requires the extension Widgets. It is already bundled with BlueSpice pro, but not with BlueSpice free.

With this template users can embed an interactive SVG on a wiki page. The SVG file has to be uploaded to the wiki first.

Importing the template

The import file is included in the archive file *HW-svg.zip*. Unpack the zip file first.

On the page *Special:Import,* follow these steps:

- 1. *Select file* and choose *HW-svg.xml*.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Svg
- Template:Svg/styles.css
- Widget:Svg

Using the template

- 1. **Select** *Insert > Template* from the visual editor menu.
- 2. **Select** the template *Svg*.
- 3. **Enter** the file name of the SVG file. If the file is associated with a namespace, don't forget to provide the namespace prefix. (E.g.: QM:Orgchart.svg). The file needs to already exist in your wiki.
- 4. Click "Save changes".

A

Latest revision as of 10:30, 21 July 2023

Starting with BlueSpice 4.3, these subpage lists can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template can be integrated into every wiki page using the editor toolbar. It generates a list of subpages of a wiki page. You can create a single or multicolumn layout, with or without bullets.

CEO Office Manager	Cancel	Subpages	Apply change
 Sales Manager Support Manager Technical support assi 	, i i i i i i i i i i i i i i i i i i i	additional information abou	t the "Subpages"
\wedge	Namespace		(i)
	IMS		
	Parent page 🛪	:	
	Role definitions	list	*
	Column layou	t	
	no		
	Bullet points		
	yes		

Importing the template

The import file is included in the archive file *HW-subpages.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. Select file and choose *HW-subpages.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file

The template is now available in your wiki.

Usage

Insert the template *Subpages* with VisualEditor. Provide the settings for the list:

Field	Description
Namespace	Namespace in which the parent page is located. Leave blank for the main namespace.
Parent page	The wiki page that has the subpages.
Column layout	no = flat list; yes = 3-column layout
Bullet points	yes = bulleted list; no = list without bullet points

Pages included in the import

The xml import creates the following file in your wiki:

- Template:Subpages
- Template:Subpages/styles.css

Importing the template

The import file is included in the archive file *HW-TOClimit.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. Select file and choose *HW-TOClimit.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:TOClimit
- Template:TOClimit/styles.css

Usage

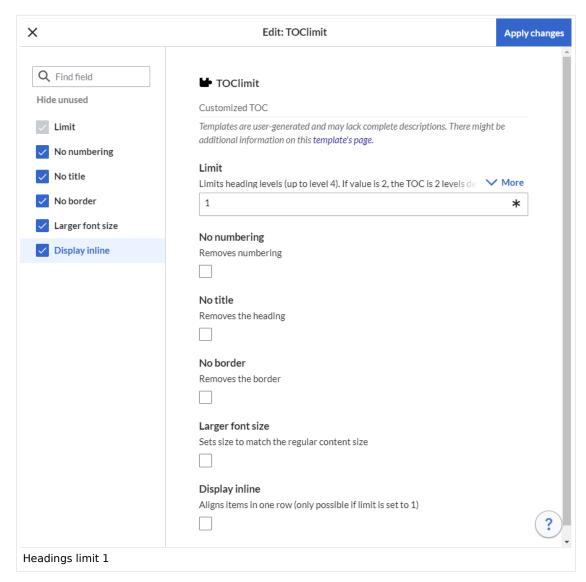

1. Add the template from Visual Editor.

×	Add a ten	nplate		
🖶 Add a temp	late			
ТОС			Add temp	late
TOClimit Customized TO	с			
TOClimit/styles	. <u>CSS</u>			
electing the TOC	limit template			

2. **Enter** the level of headings you want to show. Sie die Anzahl der gewünschten Überschriften-Ebenen ein (z.B. 1).

3. Save the page. The table of contents is now shown with your custom settings.

Note: -v4.1 If you need to make adjustments to the parameters after saving the template, switch to source editing mode. Since the table of contents is not shown in visual aditing mode, the template will not be shown in this mode.

Parameters

The following customizations are possible:

Parameter	Possible value	Description
limit	1, 2, 3, 4	Limits heading levels (up to level 4). If the value is $\begin{bmatrix} 2 \\ -2 \end{bmatrix}$, the TOC is 2 levels deep
nonum	0, 1	Removes numbering when set to 1
notitle	0, 1	Removes title when set to 1
noborder	0, 1	Removes border when set to 1
fontlarge	0, 1	Sets size to match regular content size when set to 1
inline	0, 1	Shows the items in a row (only possible if limit=1)

Examples

{{TOClimit|limit=1|nonum=|notitle=1|noborder=1|fontlarge=1}}

Output before and after:

BlueSpice

Main levels of the TOC displayed in one row:

{{TOClimit|limit=1|nonum=1|notitle=1|noborder=0|fontlarge=0|inline=1}}

Header level 1 | Header level 1 | Header level 1 |

No edit summary Tag: Visual edit

Latest revision as of 13:14, 5 February 2024

This template allows to include a section from a wiki page on another page. It can be styled as a colored box.

Importing the template

The import file is included in the archive file *HW-transclusion-en.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-sectiontransclusion.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. Keep the selection Import to default locations.
- 4. Click Upload file

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Transclusion
- Template:Transclusion/styles.css

Using the template

- 1. Add the template from the VisualEditor insert-dialog.
- 2. Fill in the form fields as needed.

Note: If, after importin the template to your wiki, the input fields are not displayed when you first integrate it into a wiki page, you need to open the template in the template namespace, make a change (e.g. insert spaces) and save the template. The input fields should now be displayed correctly.

File:HW-transclusion-templatedata-en.png

Input fields for transclusion

Input field	Description
Page to transclude into this document	Page name of the page containing the section (including the namespace prefix if the page is not in the main namespace).
Page section	Heading of the section you want to transclude. If a section contains sub-headings, these are included up to the next heading at the same level of the section.
Color style	If you want to apply a background color, you can select one here. Choices are: blue, green, grey, red, yellow
Background	If you don't like any of the color styles, you can enter your own color in hex format (e.g. # cce6ff).
Border	Creates a border color. Apply only when you use a custom background color instead of the color style (which already uses its own border color).
Padding	Distance from box to box content. Default value: 20px. You can set this to any other pixel-value or simple enter 0 for now padding.
