Content Droplets

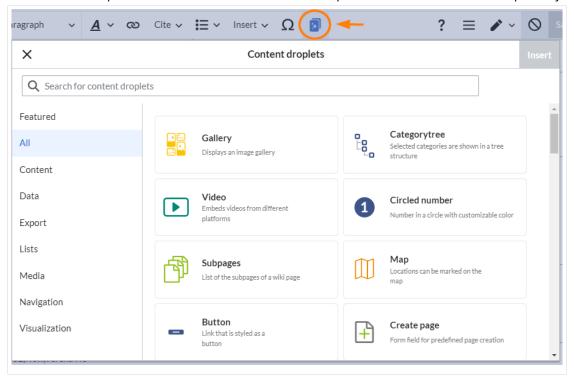

To insert additional functionality in a wiki page, you can use Content droplets. Content droplets include tags that were previously accessed from *Insert > Magic word* in the editor toolbar. They also provide access to some templates that are preconfigured in the wiki, such as message boxes.

Adding a droplet to a page

To add a droplet to a page:

- 1. **Click** the Content droplets icon in the editor toolbar or type << .
- 2. **Search** for a droplet name in the search bar of the droplets menu or browse the droplets by category.

- 3. Select a droplet
- 4. Click Insert.

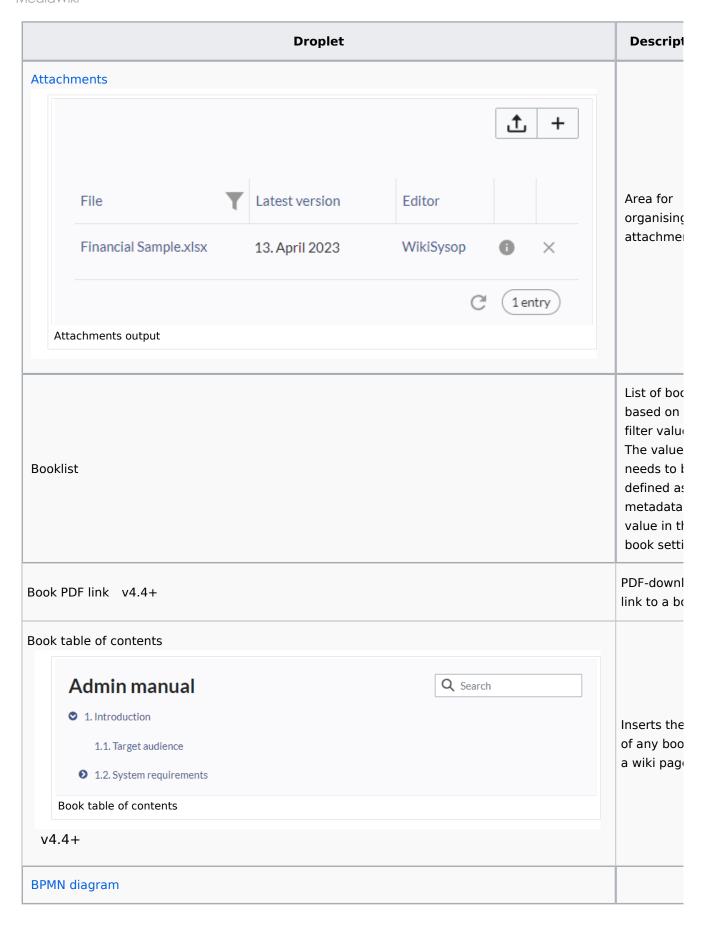

Note: Some droplets open an inspector menu which contains another *Insert* button. Be sure to confirm that button as well.

Based on the type of droplet, you can continue with configuring the droplet as needed.

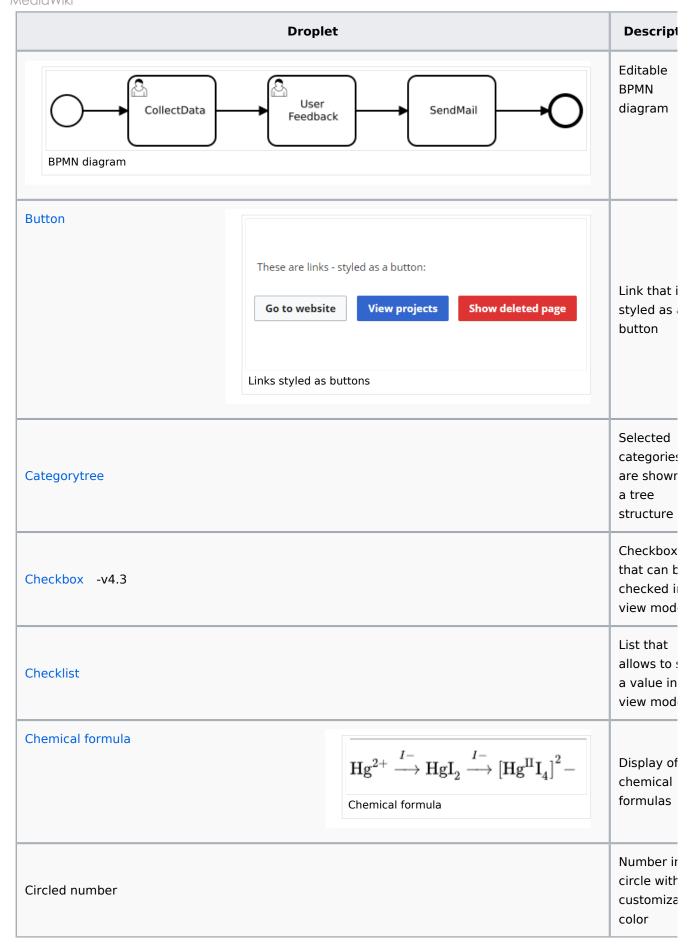

List of droplets

→ View examples of droplets outputs.

Manual:Start page templates

This feature is available from BlueSpice 4.3.

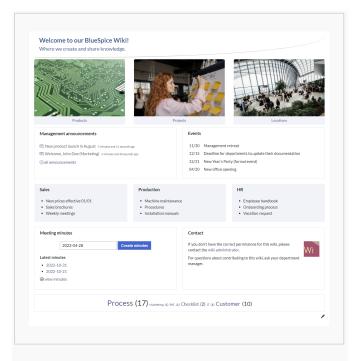

Contents

1 Available templates	24
1.1 Importing additional templates	25
2 Using the template	25
3 Editing your start page	25
3.1 Editing the subpages	25
3.2 Adding or removing sections	26

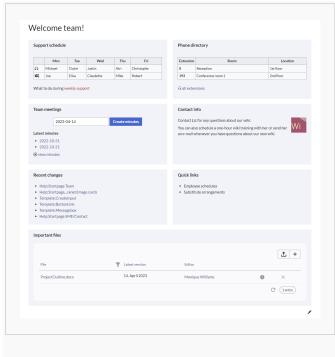

Available templates

To create portal pages in our wiki, you can use our pre-designed starter pages. Currently, the following starter pages are available:

Startpage Intranet

Startpage Team

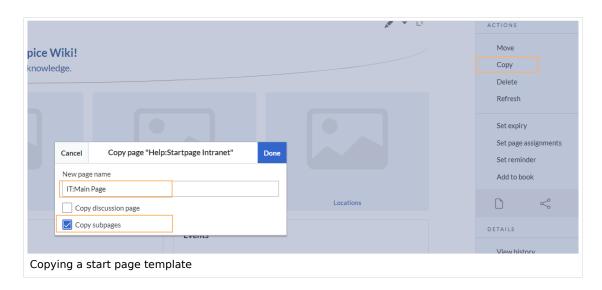

Importing additional templates

To make additional templates in your wiki available, import them from our Startpage templates download page. If you want to create your own, simply create additional pages starting with the page name "Help:Startpage" and its necessary subpages.

Using the template

To use any startpage templates, the following steps are necessary:

- 1. **Go** to the page Template: Startpage in your wiki.
- 2. **Click** on the link for one of the available templates. This brings you to the template in the Help: namespace.
- 3. **Copy** the page **including its subpages** to a location of your choice. For example, make it the main page for an existing namespace that does not have a main page yet (e.g., IT:Main Page would create the main page for the IT: namespace).

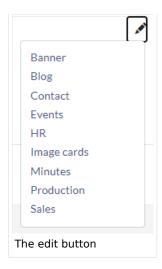

Editing your start page

Editing the subpages

After copying a start page to your wiki location, you can start to edit it. The sections of the start page are not located on the page itself, but are stored as subpages of the start page. To edit a section, click the edit icon at the end of the page and select a subpage:

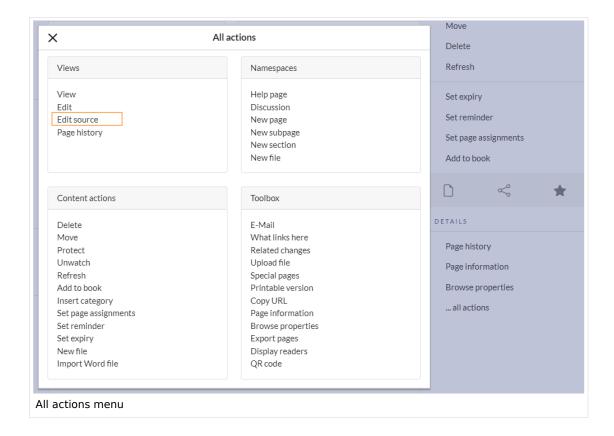

Once you are on the subpage, you can edit it like any wiki page. If the page contains a template, edit the template. If the page contains the content directly on the page, you can replace it with any content you like.

Adding or removing sections

To add, edit, or remove sections from the Startpage, you need to work in the source view of your page. Since the title area is hidden, you need to go to your page tools in the right sidebar.

In the Details section, click ...all actions. From the actions dialog window, select Edit source.

Extension: Page Forms

all extensions

Overview				
Description:	Forms for creating and editing wiki pages			
State:	stable	Dependency:	MediaWiki	
Developer:	Yaron Koren, Stephan Gambke, and others	License:	GPL v2+	
Туре:	MediaWiki	Category:	Content Structuring	
Edition:	BlueSpice pro, BlueSpice Farm, BlueSpice Cloud	Version:	4.1+	
⊘ View help page				

Features

Page Forms (known until November 2016 as **Semantic Forms**) is an extension to MediaWiki that allows users to add, edit and query data using forms.

It was originally created as an offshoot of the Semantic MediaWiki extension to be able to edit templates that store their parameters via SMW. However, it can now also work with the alternative Cargo extension, or with neither extension installed.

Very simply, Page Forms allows you to have **forms for creating and editing pages** on your wiki, as well as **for querying data**, all **without any programming**. Forms can be created and edited not just by administrators, but by users themselves.

The main components of Page Forms functionality are form definition pages, which exist in a separate namespace, 'Form:'. These are pages consisting of markup code which gets parsed when a user goes to a form. Since forms are defined strictly through these definition pages, users can themselves create and modify forms, without the need for any actual programming.

The Page Forms extension is mostly used to add and edit calls to infobox-style templates within pages. A form allows a user to populate a pre-defined set of templates, as well as page sections, for any page; if Cargo or Semantic MediaWiki are used, the data within the templates can then be stored and queried.

Forms can also be used to edit the data in an existing page, and you can enable an "formedit" tab to show up on any page.

Page Forms also supports **autocompletion of fields**, so users can easily see what the previously-entered values were for a given field. This greatly helps to avoid issues of naming ambiguity, spelling, etc.

Data in a page that doesn't fit into the form, like a free-form text description of the page's subject, isn't ignored when the page is edited with a form; rather, it is placed into a separate input box called "free text".

Page Forms also includes a wide variety of other functionality related to forms.

Accessibility

Test status:	2-testing complete
Checked for:	Web, Authoring tool
Last test date:	2022-08-05
WCAG level:	AA
WCAG support:	partially supports (workaround: no)
Comments:	some input types are not keyboard or screenreader accessible. E.g., tokens, bs-msvisualeditor. Standard input elements such as text fields, drop downs, textareas, etc. are accessible. Therefore, accessible forms can be created.
Extension type:	extended
Extension focus:	editor

Reference: Semantic MediaWiki

Extension: Semantic MediaWiki

(a) all extensions

	Overview				
Description:	allows users to add structured data to wiki pages through simple wikitext markup that turns links to other pages and data values in a page into meaningful properties. With this information, SMW helps to search, organize, browse, evaluate, and share the wiki's content.				
State:	stable Dependency:		MediaWiki		
Developer:	Markus Krötzsch, Jeroen De Dauw, James Hong Kong	License:	GPL v2+		
Туре:	ype: MediaWiki Category:		Data Analysis		
Edition:	Edition: BlueSpice pro, BlueSpice Farm, BlueSpice Cloud Version:		4.1+		
For more info, visit Mediawiki.					

Features

Semantic MediaWiki (SMW) is an extension for managing structured data in your wiki and for querying that data to create dynamic representations: tables, timelines, maps, lists, etc. The actual homepage of Semantic MediaWiki, including user documentation in multiple languages, is semantic-mediawiki.org. There are various other pages in the MediaWiki and Wikipedia space related to SMW, but the homepage is the most up-to-date source of information.

There are a large number of "spinoff" extensions that require the presence of Semantic MediaWiki; see the category Semantic MediaWiki extensions for the full list (some of these extensions are obsolete).

Makes the wiki more accessible to machines and humans.

Accessibility

Test status: 2-testing complete	
Checked for:	Web, Authoring tool
Last test date:	2022-08-08
WCAG level:	AA
WCAG support:	supports

Comments:	simply allows to create structured data from wiki content. It is up to the wiki users who use the SMW features to ensure that they only use accessible features of this extension.

Extension focus:	reader

Reference:TemplateData

Extension: TemplateData

(3) all extensions

Overview				
Description: Implement data storage for template parameters (using JSON)			ng JSON)	
State:	stable	Dependency:	MediaWiki	
Developer:	Timo Tijhof, Moriel Schottlender, James Forrester, Trevor Parscal	License:	GPL v2+	
Туре:	MediaWiki	Category:	Content Structuring	
Edition:	BlueSpice pro, BlueSpice Farm, BlueSpice Cloud	Version:	4.1+	
For more info, visit Mediawiki.				

The extension **TemplateData** introduces a <templatedata> tag and an API which together allow editors to specify how templates should be invoked.

Not all data types that can be selected for a parameter, have any actual effect and are treated as "unknown":

Value	Description
unknown	standard setting
	no visible effect

TO GIG T TIKE	
Value	Description
	no visible effect
line	intended for content that should be forced to stay on one line
	Effect: "line" prevents a parameter's input box from allowing new lines
content	The "content" value is intended for wikitext of page content, for example, links, images or text formatting.
	no visible effect
unbalanced- wikitext	intended for wikitext that cannot stand alone, i.e. it lacks an opening or closing tag or refers to other parts of wikitext.
	no visible effect
wiki-page- name	intended for a page name on a wiki
	Effect: Shows a suggestion dropdown menu containing a list of pages on the wiki, which can be selected. Namespaces can also be defined in the search. Additionally, it forces the input box content to stay on one line. It doesn't prevent a non-page from being inputted.
wiki-file- name	intended for a locally hosted file name
	no visible effect
wiki- template- name	intended for the name of a template
	Effect: Shows a suggestion dropdown menu containing a list of templates, which can be selected. Additionally, it forces the input box content to stay on one line. It doesn't prevent a non-template from being inputted.
wiki-user- name	intended for a username on a wiki
	Effect: Shows a suggestion dropdown menu containing a list of actual users' names, which can be selected. Additionally, it forces the input box content to stay on one line. It doesn't prevent a non-username from being inputted.
number	intended for numerical values, including negative values and decimals.
	no visible effect
boolean	intended for a value that is either true, false or unknown. This is intended by the manual to be represented by a "1", "0" or blank value.
	Effect: With the autovalue:0, a checkbox appears in the visual editor, which can be switched on and off.
date	intended for a date in the YYYY-MM-DD format

Value	Description
	no visible effect
url	intended for a URL, with Internet protocol (e.g., "https://" or "//") included Effect: It makes the input box display an external link icon (a square with arrow pointing out of it) in the left hand side of the box and makes the box glow red when the user clicks away without entering a URL value that includes a valid Internet protocol (e.g., "https://", "ftp://" or "//") followed by some text.

See also the general instructions for using the Start page templates.

Startpage Management System

For management systems

Templates download/Action points

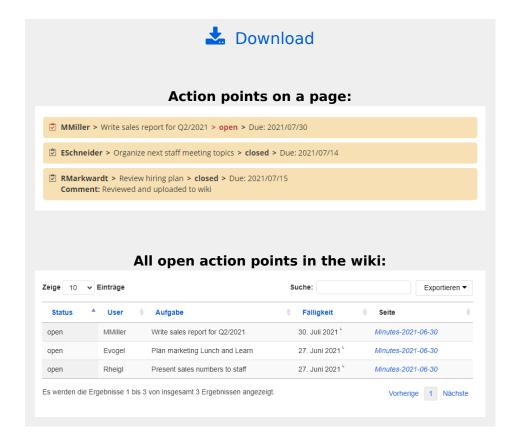

0

Starting with BlueSpice 4.4, it is possible to create tasks by default. Therefore, importing this template is no longer necessary.

This template creates action points that can be included on meeting minutes or other wiki pages. In addition, an overview page of all open tasks is included.

It requires
SemanticMediaWiki (
included in BlueSpice
pro).

Importing the template

The import file is included in the archive file HW-Action points.zip. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. Select file and choose HW-Action points.xml.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Action points
- Template:Action points/styles.css
- Action points list(Page in the main namespace)
- Property:Ap-duedate
- Property:Ap-name
- Property:Ap-status
- Property:Ap-description

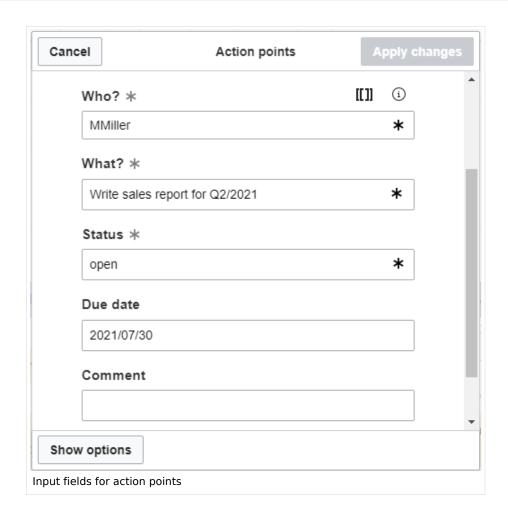

Using the template

1. Add the template from the VisualEditor insert-dialog.

2. Fill in the form fields as needed.

Note: If, after importin the template to your wiki, the input fields are not displayed when you first integrate it into a wiki page, you need to open the template in the template namespace, make a change (e.g. insert spaces) and save the template. The input fields should now be displayed correctly.

Input field	Description
Who?	Person that needs to complete the task. Pulls up the wiki users, but entering any name is possible.
What?	Task description
Status	open or closed.
Due date	Date, should be entered as YYYY/MM/DD
Comment	Use for any additional information. The idea is to provide a closing comment.

Task overview list

The included page "Action points list" shows all open tasks. It uses SMW to display a table of all open action points in the wiki, but can be easily adjusted to filter by namespace or subpages (to filter out meeting minutes, for example).

Templates download/Banner

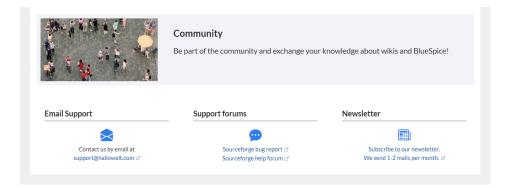

Starting with BlueSpice 4.3, an identical template "Bannerbox" is already preloaded. Therefore, importing this template is no longer necessary.

This template creates a page banner that you can include on portal pages, for example. You can see an example here in the Helpdesk on the page Community.

Importing the template

The import file is included in the archive file HW-banner.zip. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. Select file and choose HW-banner.xml.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file...

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

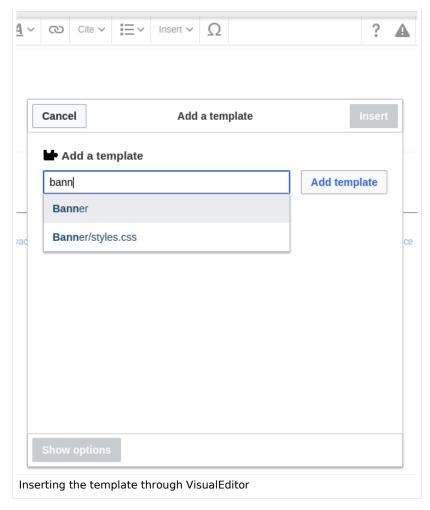

- Template:Banner
- Template:Banner/styles.css

Creating a banner

1. From the Visual Editor *Insert > Template* menu, add the template "Banner".

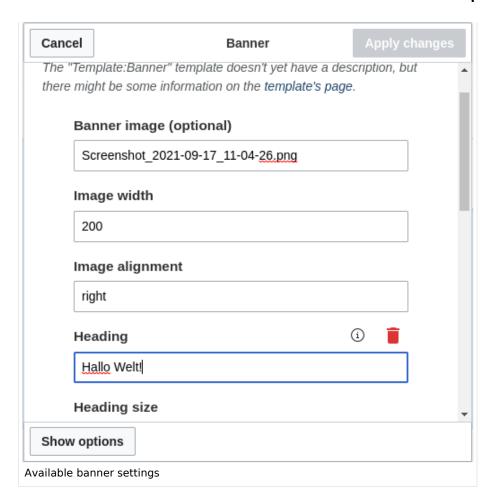

2. Click on the inserted template to view the available parameters for formatting the look of the banner.

Important! The settings only take effect after you save the page if you have just inserted the banner template on your page.

All settings for the banner are optional. This means that a box can be generated without image, heading, or text.

Example settings

Element	Value	Description	
Banner image	QM:Flower_white.jpg	Image name (with namespace prefix, if it exists, but without the <i>File:</i> prefix). The banner image is optional.	

	Element	Value	Description
1	Image width	200	Number. The width will automatically be used as pixelvalue. Default value: 200
	Image alignment	left, right	Shows the imag to the left or right. Default value: <i>left</i> .
	Heading	Meine Überschrift	Heading text
2	Heading size	1.6em	Size can also be entered as 16px or any other css size value. Default value: <i>1.6em</i> .
	Heading color	#444444	Color as hex value.
	Text	Das ist der Inhalt.	Text of the box.
3	Text size	1.2em	see Heading size
	Text color	#444444	see Heading color
4	Content padding	20px	Distance of the title/text area to the box and the image. Default value: 10px.
5	Padding of the container box	10px	Padding of the box itself. Default value: <i>O.</i>
6	Background color	#efefef	Color as hex value . Default value #efefef (a light grey)
7	Background icon	bgicon1, bgicon2, bgicon3, swoosh	Adds a background effect to the banner

Background effect

The following background effects are available by default, here shown in different banner color variations:

Bgicon	Result
bgicon1 v4. 3+	Welcome to our BlueSpice Wiki! Where we create and share knowledge.

Bgicon	Result	
bgicon2	Welcome to our BlueSpice Wiki! Where we create and share knowledge.	
bgicon3 v4. 3+	Welcome to our BlueSpice Wiki! Where we create and share knowledge.	
swoosh	Welcome to our BlueSpice Wiki! Where we create and share knowledge.	

Templates download/BookTOC

This template allows to embed the Table of Contents of a book on any wiki page. It can be inserted into a wiki page via the VisualEditor *Insert* > *Template* menu.

- 1. Introduction
- 2. Organizational structure
 - 2. 1. Organization chart
 - 2. 2. Substitute arrangements
- 3. Operational organization
- 4. Management instruments
 - 4. 1. Quality management
 - 4. 2. Risk management

Importing the template

The import file is included in the archive file *HW-Bookchapters.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. **Select file** and choose *hwBookchapters.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Bookchapters
- Template:Bookchapters/styles.css

Using the template

- 1. **Insert** the template from the Visual Editor.
- 2. **Enter** the title of the book.
- 3. Click Apply changes.

- 1. Introduction
- 2. Organizational structure
 - 2. 1. Organization chart
 - 2. 2. Substitute arrangements
- 3. Operational organization
- 4. Management instruments
 - 4. 1. Quality management
 - 4.2. Risk management

Book chapters on a wiki page

The table of contents is now displayed on the page.

Note: It is not possible to collapse the sub-chapters.

Templates download/ButtonLink

Starting with BlueSpice 4.3, these button links can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template creates a link that is styled as a button. It can be inserted into a wiki page via the VisualEditor *Insert > Template* menu.

These are links - styl	led as a button:	
Go to website	View projects	Show deleted page

Importing the template

The import file is included in the archive file *HW-ButtonLink.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-ButtonLink.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Important! The input fields for the template parameters are usually not automatically available after importing the template to your wiki . You have to open the imported template file and make an edit (e. g., add a space and then save the page) to activate the template data functionality. The input fields should now be displayed correctly when you use the template on a page.

Pages included in the import

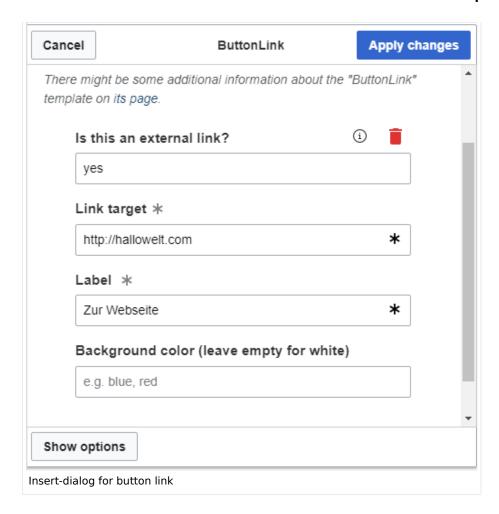

The xml import creates the following files in your wiki:

Template:ButtonLink

Using the template

- 1. Add the template from the VisualEditor insert-dialog.
- 2. Fill in the form fields as needed.

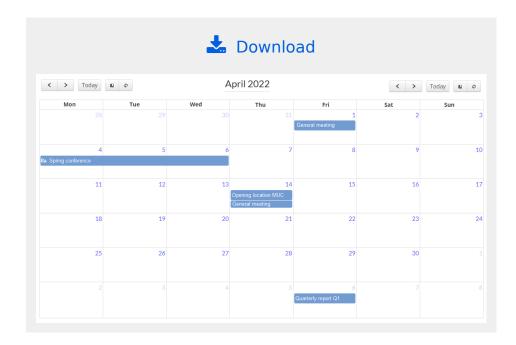

Settings

Input field	Description	
	yes = the link target starts with http:// or https://	
Is this an external link?	Leave blank for internal wiki page	
Link target	Name of the wiki page or the website	
Label	Label shown on the button	
Background color	Possible button colors: red, blue (leave blank for white)	

Templates download/Calendar

This template creates a simple company calendar.

Importing the template

The import file is included in the archive file *HW-Calendar.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

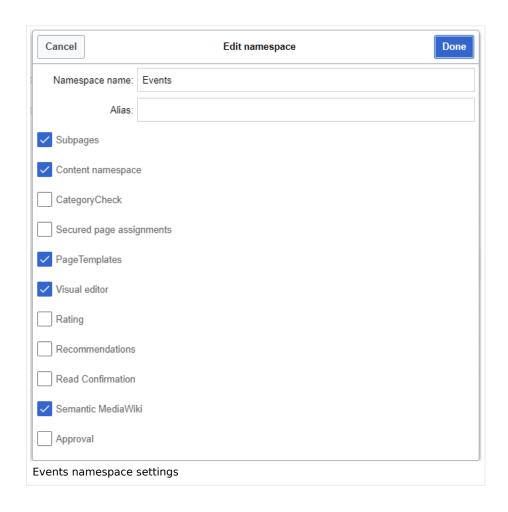

- 1. **Select file** and choose *HW-Calendar.xml*.
- 2. Enter an Interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Preparation

Important! The appointments are created in the Events namespace by default. Make sure it exists in your wiki before creating an event. The following settings need to be activated:

- Subpages
- Content namespace
- Visual editor
- Semantic MediaWiki

If you want to use a different namespace, the form fields in the source text of the main calendar page must be adjusted accordingly: Change the parameter namespace=events on the page "Calendar" as needed.

{{#forminput:form=Event|query string=namespace=events}}

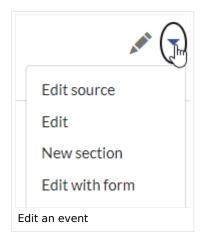

Usage

It is not possible to create an event page as a recurring event. An event page can however have multiple subentries with their own dates. These subentries are also shown on the calender.

Create event

- 1. **Go** to the page *Calendar* (via the search or the browser address bar).
- 2. **Create** a new event using the *Create new event* input field. Enter a suitable page name here (e.g. Summer festival 2022).
- 3. **Fill out** the event information form.
- 4. **Save** the form.

If you want to add more dates to the event that should also appear in the calendar overview (e. g., a date to prepare for the summer festival), you can edit the page again:

- 1. **Switch** to form-editing mode on the event page.
- 2. Click Add another entry.
- 3. **Activate** the "More info" checkbox if you want to create an additional subpage for the entry (e.g., for event planning).
- 4. **Save** the page. If you have activated the "More info" checkbox, the event name is now displayed as a link to a subpage.

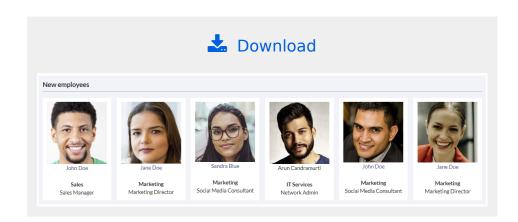

Pages included in the import

The xml import creates the following files in your wiki:

- Calendar
- Template:Calendar
- Template:Calendar/styles.css
- Template:Event
- Template:EventSub
- Template:EventlistEnd
- Template:EventlistRow
- Template:EventlistStart
- Form:Event
- Form:Events
- Property:Event/End
- Property:Event/Eventname
- Property:Event/Participants
- Property:Event/Start

Templates download/Employee

This template creates an employees gallery that you can include on portal pages, for example.

Importing the template

Importing the template

The import file is included in the archive file *HW-Employee.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. **Select file** and choose *HW-Employee.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

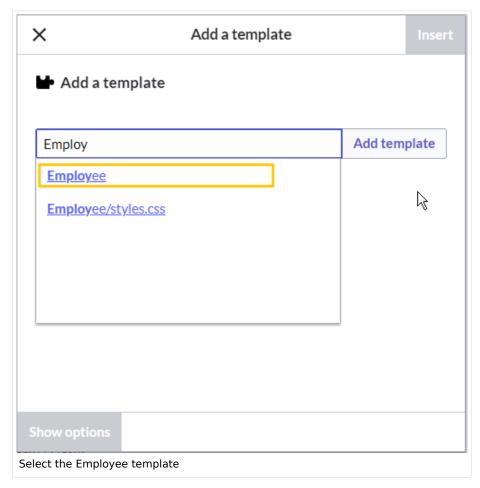

The xml import creates the following files in your wiki:

- Template:Employee
- Template:Employee/styles.css

Creating the employee gallery

You can add each individual employee card as a template. Alternatively, you can add a "batch" of employees directly in the source mode of the page.

1. From the Visual Editor *Insert > Template* menu, add the template "Employee".

2. Provide the necessary information in the parameter fields.

Adding a "batch" of employees

To speed up the process, you can quickly add the template multiple times directly in the source editing mode. This also allows you to add a colored grey wrapper around the gallery:

```
<div style="background:#e9e9ee">
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
{{Employee|title=Title|image=|name=Employee name|department=Department|username=}}
</div>
```

Available parameters

	Element	Value	Description
1	title	text	Job title
2	image	file name (without naemspace prefix)	Name of the uploaded user image (e. g.: lastnamefirstname.png). If left empty, the template looks for the profile image of the user.
3	name	text	Name of the employee
4	department	text	Department of the employee
5	username	username (without namespace prefix)	If the user exists in the wiki and the user name is provided, the employee card links to the user's profile page.
6	employeepage	name of a wiki page	If the employee does not exist as user, an employee page can be created anywhere in the wiki. If a page name is provided here, the employee card links to that page.

Templates download/IMS Documents

This well-designed template set is our solution for managing controlled documents with BlueSpice. It enables you to organize the documents for any process-oriented quality management approach with little effort.

You acquire the set directly via our sales department.

Included templates

This set contains the forms, templates, and overview pages for the following document types:

- Process description
- Work instruction
- Role definition
- Audit report

Supported norms

Out-of-box, the following standards are supported:

- ISO 9001:2015
- ISO 14001
- ISO/IEC 27001
- ITIL 3/4

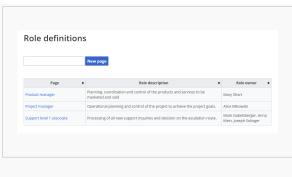

These standards can easily be expanded or replaced by other standards.

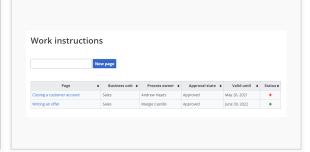

Importing the template files

Detailed instructions for importing and using the template set are included in the archive file (. zip) as a PDF.

Templates download/Icon

Starting with BlueSpice 4.3, icons can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

Starting with BlueSpice 4.3, these button links can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template makes it possible to insert Bootstrap icons on a page.

Importing the template

The import file is included in the archive file *HW-lcon.zip*. Unpack the zip file first.

On the page Special:Import, follow these steps:

- 1. **Select file** and choose HW-Icon.xml.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

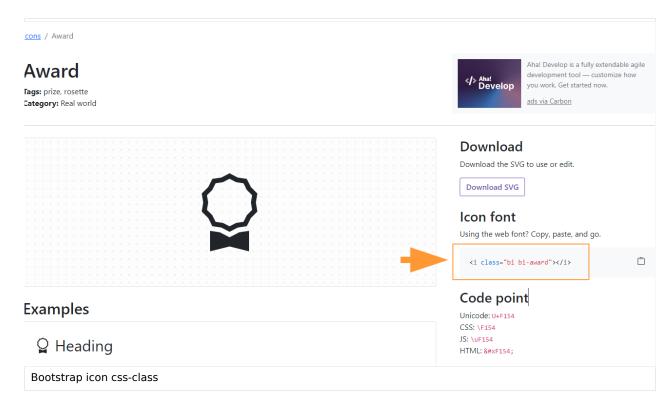

The xml import creates the following file in your wiki:

Template:Icon

Using the template

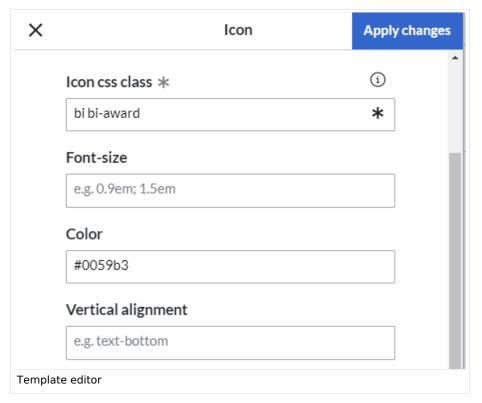

Important! BlueSpice does not always include the latest version of bootstrap icons. See the list of currently supported icons.

1. **Find** a bootstrap icon from the Bootstrap website at https://icons.getbootstrap.com/**Click** on the icon you would like to use. The icon page shows you the class-name of the icon on the right side of the page:

- 2. **Highlight** the class name (it has the format *bi bi-myicon*) and **copy** it to your clipboard (ctrl+c).
- 3. Go back to your wiki page.
- 4. **Enter** [{ in visual editing mode at the cursor position where you want to insert the icon. The template editor opens.
- 5. **Copy** the icon class from your clipboard:

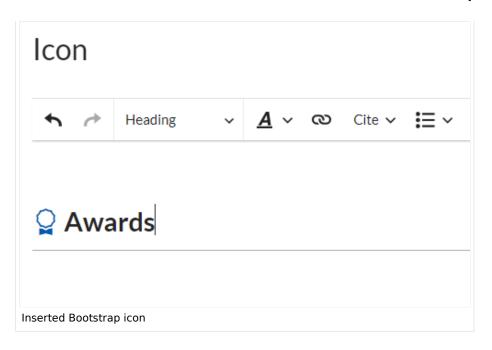

- 6. **Change** the font size (optional) if you want the size to be different from the text surrounding it (e.g., from the size of a heading if the icon is placed in the heading or of the paragraph text if the icon is placed in the flow-text. Smaller than text icons are usually sized no smaller than 0.85em and larger icons up to 2.5em.
- 7. **Color:** If you want the color to be different from the surrounding text, you can specify any web color (e. g., a color name like blue or a hex-valuesuch as #0059b3 for a more specific blue). A list of web colors can be found at https://www.w3schools.com/colors/colors picker.asp
- 8. **Vertical alignment:** It should not be necessary to provide an alignment value. The standard is set to text-top and usually works in headings and in flow-text. If it looks a little off, you can try other vertical-alignment values, such as text-bottom. For a full list of possible values, see https://www.w3schools.com/cssref/pr_pos_vertical-align.asp.
- 9. Click Apply changes.

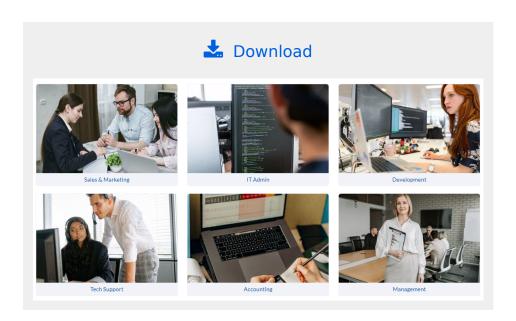

The icon is now displayed on the page.

Templates download/Image cards

This template creates a set of images that is useful for linking to wiki pages.

Templates download

3 Adding image cards to a page	60
3.1 General considerations	60
3.2 Image cards	60
3.2.1 Standard-sized image cards	61
3.2.2 Large image cards	61
3.3 Icon cards	62
4 Available settings	63
4.1 Template:Image_cards/start	63
4.2 Template:Image_cards	63

Importing the template

The import file is included in the archive file HW-lamgeCards.zip. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-ImageCards.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file...

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Image_cards
- Template:Image cards/start
- Template:Image_cards/end
- Template:Image_cards/styles.css

Adding image cards to a page

General considerations

- Start and end templates: Each card set needs the start template (Image cards/start) and the end template (Image cards/end). Make sure to add the end template right after the last image card without a line-break. If you have a line break, you will see some unnecessary space after the last card.
- Card sizes: You can choose between *medium* (*standard*), *small* and *large* image cards. By default, standard cards are shown.
- **Images or icons:** You can choose to create image cards or icon cards. Icon cards are only available in the sizes *small* and *medium*. If you want to uses images, you need to upload them to your wiki first.

See below for a complete list of available settings (template parameters).

Image cards

The easiest way to add card is to choose a starting layout from the examples provided on this page. Simply copy and paste the example code in source-editing mode into your page.

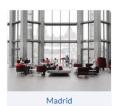

Important! Always paste any code using plaintext - **Ctrl+Shift+v** - in your wiki in source editing mode to avoid creating unnecessary tags which will break the view.

Standard-sized image cards

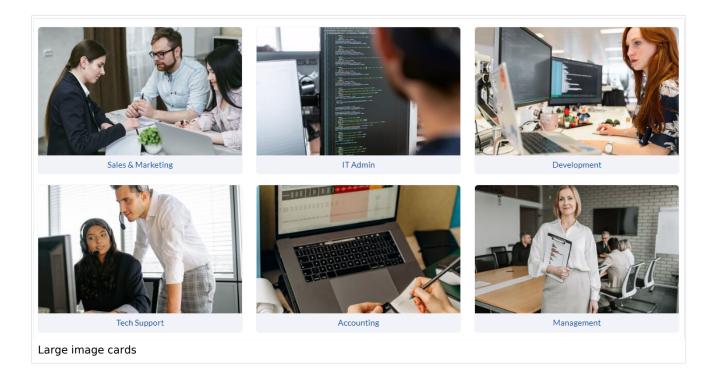

Standard-sized cards

Code to copy:

(Replace the file names for imgname= with the correct file names from your wiki)

```
{{Image cards/start|cardsize=}}
{{Image cards|imgname=yourimage1.jpg|label=London|imglink=https://google.de|alt=office
in London headquarters}}
{{Image cards|imgname=yourimage2.jpg|label=Helsinki|imglink=http://google.de|alt=}}
{{Image cards|imgname=yourimage3.jpg|label=Madrid|imglink=Main Page|alt=}}
{{Image cards|imgname=yourimage4.jpg|label=Hamburg|imglink=Main Page|alt=}}
{{Image cards|imgname=yourimage5.jpg|label=Regensburg|imglink=|alt=}}{{Image cards|/end}}
```

Large image cards

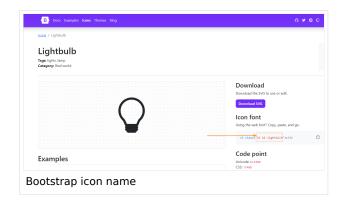

Code to copy:

(Replace the file names for imgname= with the correct file names from your wiki)

```
{{Image cards/start|cardsize=large|flexwrap=wrap}}
{{Image cards|imgname=yourimage1.jpg|label=Sales & Marketing|imglink=Main Page}}
{{Image cards|imgname=yourimage2.jpg|label=IT Admin|imglink=Main Page}}
{{Image cards|imgname=yourimage3.jpg|label=Development|imglink=Main Page}}
{{Image cards|imgname=yourimage4.jpg|label=Tech Support|imglink=Main Page}}
{{Image cards|imgname=yourimage5.jpg|label=Accounting|imglink=Main Page}}
{{Image cards|imgname=yourimage6.jpg|label=Management|imglink=Main Page}}{{Image cards|imgname=yourimage6.jpg|label=Management|imglink=Main Page}}{{Image cards|imgname=yourimage6.jpg|label=Management|imglink=Main Page}}
```

Icon cards

Supported icons:

- Bootstrap icons: Syntax is: bi bi-gear
- Font Awesome up to 6.2.1 v4.3+ : fa-solid fa-house (v. 6) or fas fa-wrench (v.5)

Important! BlueSpice does not always include the latest version of bootstrap icons. See the list of currently supported icons.

Code to copy:

(Replace the file names for imgname = with the correct file names from your wiki)

```
{{Image cards/start|cardsize=}}
{{Image cards|iconname=bi bi-gear|iconcolor=Tomato|label=Processes|imglink=Main Page|alt=}}
{{Image cards|iconname=bi bi-lightbulb|label=How-to's|imglink=Main Page|alt=}}
{{Image cards|iconname=bi bi-eyeglasses|label=Knowledge base|imglink=https://google.de|alt=}}
{{Image cards|iconname=bi bi-signpost|label=Directories|imglink=Main Page|alt=}}
{{Image cards|iconname=bi bi-geo-alt|label=Locations|imglink=|alt=}}{{Image cards/end}}
```

Available settings

Template:Image_cards/start

Parameter	Value	Description	
cardsize	medium (can stay empty, it is the default)smalllarge	Sets the size of the individual cards	
	• space-between (default)	Spreads the cards out evenly in the available space	
justifycontent		If the number of cards causes a line break and you don't want to switch from "space-between" to "flex-start", you can insert additional blank placeholder cards that "push" the cards in the second row to the left. You have to test the number of required placeholders. Here, 2 placeholders would be generated: {{Image cards class=placeholder}} {{Image cards class=placeholder}}	
		caras ecass peacemoracity	
	• flex-start	If there is a wrap to another line, the cards are left-aligned	
flexwrap	• nowrap (default)	Cards get smaller if many images are added to avoid wrapping	
flexwrap	• wrap	Cards keep their original size. Images that don't fit on the first row will move to the next row. This setting should be used with cardsize=large.	

Template:Image_cards

Parameter	Value	Description	
	e.g.:	Name of the image without a namespace prefix.	

Parameter	Value	Description	
imgname	myimage.jpg, myimage. png	It needs to be blank or not present if icons are used instead of images.	
label	e.g.: London	Label that is shown under the image /icon.	
imglink	e.g.: Main_Page Help:Main_Page https://google.com	Link to a wiki page or a website. The link is optional.	
alt	e.g.: office in London headquarters	Provided for assistive technologies of users who cannot see the image. This is not necessary when using icons, since icons are loaded as background images only.	
iconname	e.g.: bi bi-lightbulb	Used instead of imgname if icons are used as a visual.	
iconcolor	e.g.: Tomato, #607d8b	HTML-color value. This includes color names or generally HEX-values.	

Templates download/Mention

This template gives users a quick way of creating a user mention by simply typing {{ (opening the template dialog) and then selecting the template @ . Optionally, users can activate (email or wiki) notifications if they are mentionned on the wiki.

Importing the template

The import file is included in the archive file *HW-mention.zip*. Unpack the zip file first.

On the page *Special:Import,* follow these steps:

- 1. Select file and choose HW-mention.xml.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Important! If, after importing the template to your wiki, the input field is not displayed when you first integrate the template into a wiki page, you need to open the template in the *Template* namespace, make a "null-edit" change (e.g., insert spaces) and save the template. The input field should now be displayed correctly when using the template.

Pages included in the import

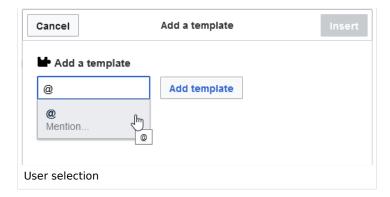

The xml import creates the following files in your wiki:

- Template:@
- Template:@/styles.css

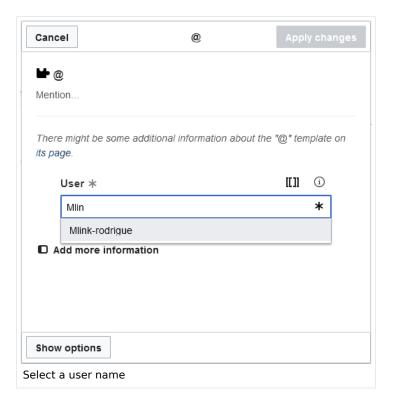

Using the template

- 1. **Enter** {{ in visual editing mode.
- 2. **Choose** the template @ .

3. **Select** a user name.

4. Click "Save changes".

Activate notifications

Users can activate notifications for mentions in their personal preferences :

- 1. **Select** the tab *Notifications*.
- 2. **Activate** the notifications options for mentions.
- 3. **Save** your changes.

Templates download/Messagebox

Starting with BlueSpice 4.3, these messages boxes can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template can be integrated into every wiki page from the editor toolbar (VisualEditor). The type of box (hint, tip, warning, etc.) can be specified as a parameter. This parameter sets the background color as well as the optional icon.

The symbol can be activated and deactivated.

Contents

1	Importing the template	69
2	Available parameters	69
3	Pages included in the import	70
4	Alignment adjustments	70

Importing the template

The import file is included in the archive file *HW-messagebox.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

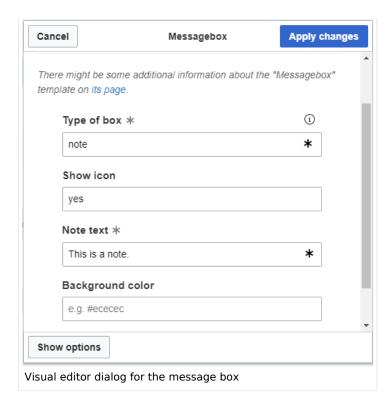

- 1. **Select file** and choose *HW-messagebox.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file....

The template is now available in your wiki and can be added to a page from the VisualEditor *Insert>Template* link.

Available parameters

Parameter	Description
Type of box	Determines the color of the box and the label. Allowed values (case-sensitive): note, warning, tip, important, example, success, neutral
Note text	Content of the box. Allows wikitext.
Show icon	Sets an additional icon for the box type. Default value: (empty), Allowed value: yes
Background color	overwrites the default background color of a boxtype. Example: #ef5f5f5 (light grey) To find a color: https://www.w3schools.com/colors/colors_picker.asp

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Messagebox
- Template:Messagebox/styles.css

Alignment adjustments

By default, the box is displayed in full-width. This means that it is displayed below any image that is used directly before the box.

To change this behavior to keep the box within the text-flow you can make the following change in Template:Messagebox/styles.css:

For the css-selector *.hw-messagebox*, **replace** the declaration "clear:both" with "overflow: hidden".

Before:

```
.cd-textbox {
...
clear:both;
}
```

Afterwards:

```
.cd-textbox {
overflow hidden;
```

Lorem ipsum dolor sit amet, consetetur sadipscing elitr, sed diam nonumy eirmod tempor invidunt ut labore et dolore magna aliquyam erat, sed diam voluptua.

At vero eos et accusam et justo duo dolores et ea rebum. Stet clita kasd gubergren, no sea takimata sanctus est Lorem ipsum dolor sit amet. Lorem ipsum dolor sit amet,

Note: This is a note.

It contains line breaks, too.

Messagebox within text-flow

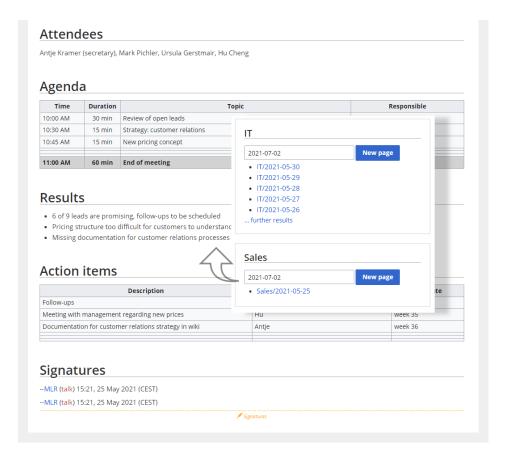

Templates download/Minutes for teams

This template contains a combined roll-up page for creating meeting minutes of different teams. A standard protocol page template is also included.

The template can be expanded with additional page templates for different types of meeting minutes.

Importing the template

The import file is included in the archive file *HW-Minutes.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. Select file and choose HW-Minutes.xml.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Meeting minutes (in the *Main* namespace)
- Template:Meeting minutes
- Template:Meeting minutes/styles.css
- Template: Meeting minutes standard

Using the template

Create a namespace

Over time, you will create many pages for meeting minutes. It therefore makes sense to store them in their own namespace. We suggest that you create the "Minutes" namespace for this purpose. The template for minutes requires that this namespace is available.

If you do not want to use the "Minutes" namespace in your wiki, you can adjust the expected namespace in the file *Template:Meeting minutes*. To do this, change the prefix *Minutes* in the *inputbox* tag:

```
{{#tag:inputbox|
...
prefix=Minutes:{{{1|{{PAGENAME}}}}}/
```

to your own namespace, here exemplified as Your namespace:

```
{{#tag:inputbox|
...
prefix=Your_namespace:{{{1|{{PAGENAME}}}}}/
```

Add a navigation link

To easily find and create meeting minutes, you should provide a direct link to the Minutes roll-up page in the main navigation. By default, the page *Meeting minutes* is located in the main namespace. You can move it to any namespace you want.

Customizing the template

Creating individual teams

Three adjustments need to be made for each team section on the main *Meeting minutes* page:

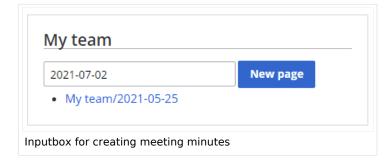

- 1. The **box heading** with the team name.
- 2. **The team name** used to create the file path for this team's minutes. This generates the main page prefix used for any meeting time for this team before the date. For example *Marketing*/2021-07-01.
- 3. The **page template** you want to use for the team's meeting minutes. By default, there is only one template (Meeting minutes standard) for all meeting minutes. Simply create a new page in the template namespace and assign it here as a preload template for a team.

Example of a team:

```
<div class="block">
== My team==
{{Meeting minutes|My team|preload=Template:Meeting minutes my team}}
</div>
```

Result:

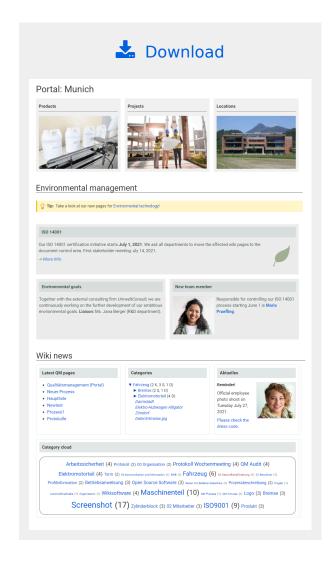

Templates download/PortalFlex

The template *Portal flex* allows you to create pages based on a 2 or 3 column layout. In addition, each page can contain an intro section.

Individual pages that were created using this *Portal flex* template can be combined into one portal page using transclusion. (as shown in the **example image** on this page).

The layout is responsive and shown optimized for different devices.

Importing the template

The import file is included in the archive file HW-PortalFlex.zip. Unpack the zip file first.

On the page *Special:Import* follow these steps:

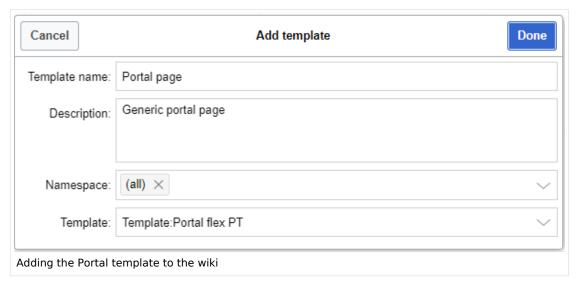

- 1. **Select file** and choose *HW-PortalFlex-en.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The form-based template is now available in your wiki.

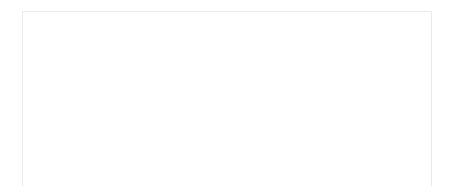

Creating portal pages

To create a portal page:

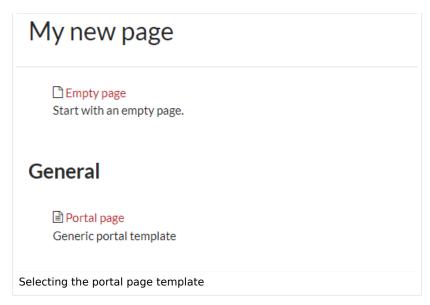

- 1. **Add** the page *Template:Portal flex PT as a page template to your wiki.*
 - 1. Go to the template manager at Special:PageTemplatesAdmin.
 - 2. Click the "+" button to add the template as a new page template for the entire wiki:
 - Template name: Portal page
 - Description: Generic portal page
 - Namespace: (all)
 - Template:Template:Portal flex PT

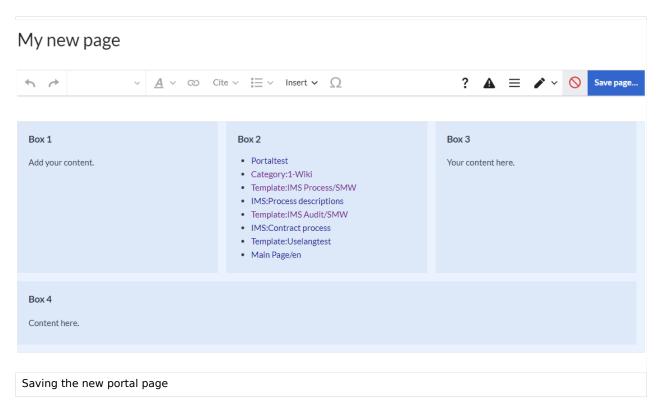

2. **Create** a new wiki page. You should now have the template Portal page available for selection.

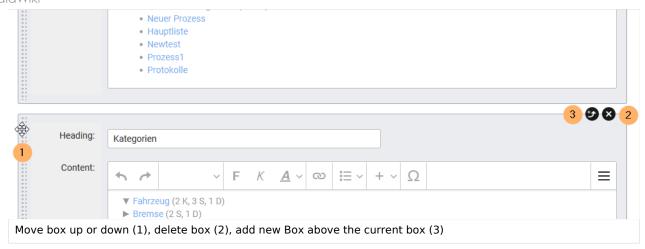

3. **Save** the new page.

- 4. To **edit the form settings** or to add simple text or graphics, click "...all actions" in the page tools and then click Edit with form. After changing the settings as needed, save the page. If you want to add dynamic content such as SMW-queries, you need to click "Edit source" instead of "Edit with form".
- 5. **Create** new boxes in forms edit mode by clicking *New box* and add your content. You can move the boxes up or down in order once you have multiple boxes. You can also override the default background color for an individual box. For example, if you selected white or grey for the default color of your boxes, you can emphasize an individual box by giving it a blue or red background color. You can also hide the heading of an individual box.

6. **Choose,** if necessary, the number of placeholders (1). If, for example, you have chosen a 2-column layout, but you have 3 boxes on the page, then the 3rd box, by default, is shown in full page width. If you select 1 empty placeholder box, then the 3rd box will use only 1/2 of the page width.

- 7. **Click** *Show preview* (2). Here you can check your previous settings. Then scroll to the bottom of the page to get back to the form.
- 8. Click Save page when you have finished your edits.

Pages included in the import

The xml import creates the following files in your wiki:

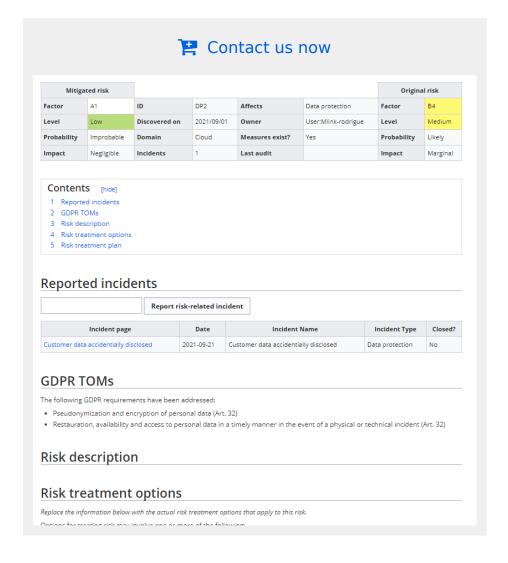

- Template:Portal flex/Start
- Template:Portal flex/Box
- Template:Portal flex/End
- Template:Portal flex/styles.css
- Template:Portal flex PT
- Form:Portal flex

Templates download/Risk management

This template set supports users who want to build and maintain a risk registry in the wiki. In addition to creating pages for risk planning, incidents can also be reported and (optionally) associated with existing risk entries.

You acquire the set directly via our sales department.

Included templates

This set contains the following templates:

• Risk matrix:

 Template that is embedded on all risk-related pages. A collapsible risk matrix helps to choose the appropriate risk factor.

• Risk entry:

- Form to create a new risk entry
- Template for risk entries
- Risk registry that lists all documented risks

• Incident report:

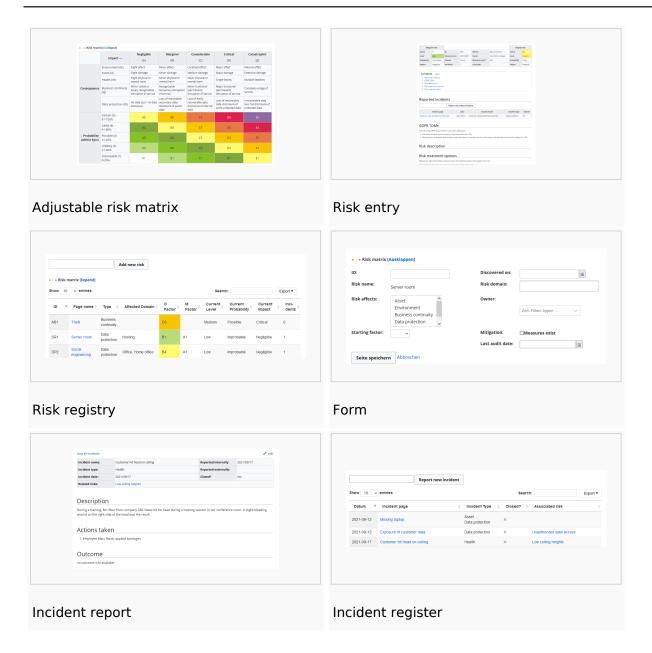

- O Form to create a new incident report. Optionally, an incident can be associated with known risks.
- Incident report template
- Incident registry that lists all documented incidents

Import der Vorlage

Detailed instructions for importing and using the template set are included in the archive file (. zip) as a PDF.

Screenshots

Templates download/SVG

Note: This template requires the extension Widgets. It is already bundled with BlueSpice pro, but not with BlueSpice free.

With this template users can embed an interactive SVG on a wiki page. The SVG file has to be uploaded to the wiki first.

Importing the template

The import file is included in the archive file HW-svg.zip. Unpack the zip file first.

On the page *Special:Import,* follow these steps:

- 1. **Select file** and choose HW-svg.xml.
- 2. Enter an interwiki prefix. Since this field is required, simply add hw (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

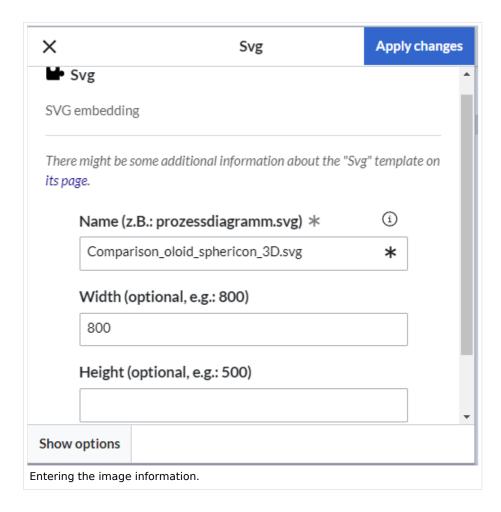

- Template:Svg
- Template:Svg/styles.css
- Widget:Svg

Using the template

- 1. **Select** *Insert* > *Template* from the visual editor menu.
- 2. **Select** the template *Svg*.

- 3. **Enter** the file name of the SVG file. If the file is associated with a namespace, don't forget to provide the namespace prefix. (E.g.: QM: Orgchart.svg). The file needs to already exist in your wiki.
- 4. Click "Save changes".

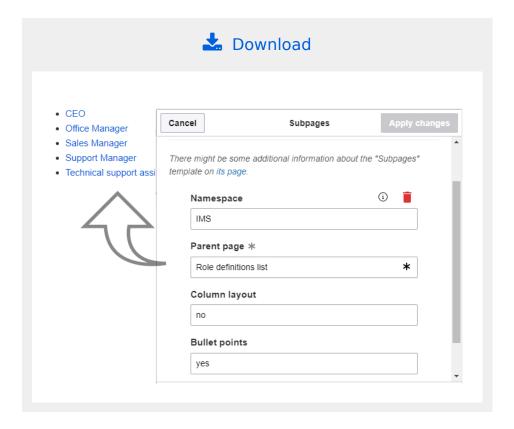

Templates download/Subpages

0

Starting with BlueSpice 4.3, these subpage lists can be inserted as a Content droplet. Therefore, importing this template is no longer necessary.

This template can be integrated into every wiki page using the editor toolbar. It generates a list of subpages of a wiki page. You can create a single or multicolumn layout, with or without bullets.

Importing the template

The import file is included in the archive file *HW-subpages.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. **Select file** and choose *HW-subpages.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Usage

Insert the template *Subpages* with VisualEditor. Provide the settings for the list:

Field	Description	
Namespace	Namespace in which the parent page is located. Leave blank for the main namespace.	
Parent page	The wiki page that has the subpages.	
Column layout	no = flat list; yes = 3-column layout	
Bullet points	yes = bulleted list; no = list without bullet points	

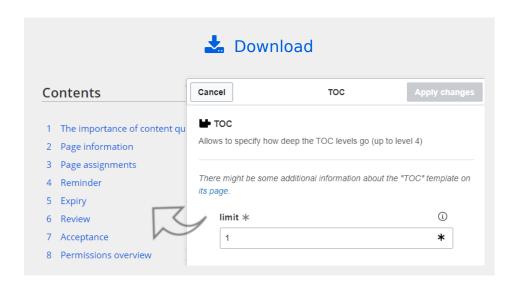

Pages included in the import

The xml import creates the following file in your wiki:

- Template:Subpages
- Template:Subpages/styles.css

Templates download/TOClimit

This template can be integrated into a page using the Visual Editor Insert>Template link. It makes it possible to limit the heading levels that are shown in the Table of Contents of a wiki page.

Importing the template

The import file is included in the archive file *HW-TOClimit.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

- 1. **Select file** and choose *HW-TOClimit.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Sie Upload file....

The template is now available in your wiki.

Pages included in the import

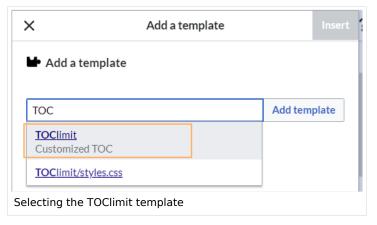

The xml import creates the following files in your wiki:

Template:TOClimit

Template:TOClimit/styles.css

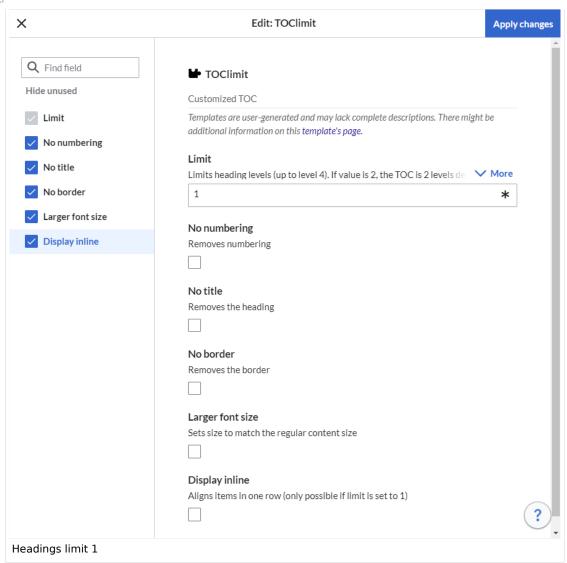

Usage

1. Add the template from Visual Editor.

2. **Enter** the level of headings you want to show. Sie die Anzahl der gewünschten Überschriften-Ebenen ein (z.B. 1).

3. **Save the page.** The table of contents is now shown with your custom settings.

Note: -v4.1 If you need to make adjustments to the parameters after saving the template, switch to source editing mode. Since the table of contents is not shown in visual aditing mode, the template will not be shown in this mode.

Parameters

The following customizations are possible:

Parameter	Possible value	Description
limit	1, 2, 3, 4	Limits heading levels (up to level 4). If the value is 2, the TOC is 2 levels deep

Parameter	Possible value	Description
nonum	0, 1	Removes numbering when set to 1
notitle	0, 1	Removes title when set to 1
noborder	0, 1	Removes border when set to 1
fontlarge	0, 1	Sets size to match regular content size when set to 1
inline	0, 1	Shows the items in a row (only possible if limit=1)

Examples

```
{{TOClimit|limit=1|nonum=|notitle=1|noborder=1|fontlarge=1}}
```

Output before and after:

Main levels of the TOC displayed in one row:

```
{{TOClimit|limit=1|nonum=1|notitle=1|noborder=0|fontlarge=0|inline=1}}
```

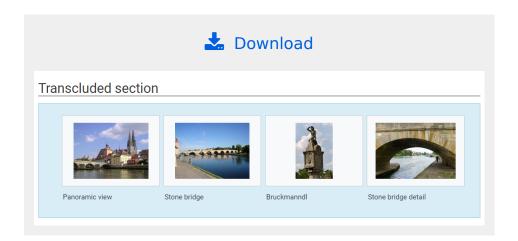

```
Header level 1 | Header level 1 | Header level 1 |

Inline-TOC
```

Templates download/Transclusion

This template allows to include a section from a wiki page on another page. It can be styled as a colored box.

Importing the template

The import file is included in the archive file *HW-transclusion-en.zip*. Unpack the zip file first.

On the page Special:Import follow these steps:

- 1. **Select file** and choose *HW-sectiontransclusion.xml*.
- 2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
- 3. **Keep** the selection *Import to default locations*.
- 4. Click Upload file....

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Transclusion
- Template:Transclusion/styles.css

Using the template

- 1. Add the template from the VisualEditor insert-dialog.
- 2. Fill in the form fields as needed.

Note: If, after importin the template to your wiki, the input fields are not displayed when you first integrate it into a wiki page, you need to open the template in the template namespace, make a change (e.g. insert spaces) and save the template. The input fields should now be displayed correctly.

File:HW-transclusion-templatedata-en.png

Input fields for transclusion

Input field	Description
Page to transclude into this document	Page name of the page containing the section (including the namespace prefix if the page is not in the main namespace).
Page section	Heading of the section you want to transclude. If a section contains sub-headings, these are included up to the next heading at the same level of the section.
Color style	If you want to apply a background color, you can select one here. Choices are: blue, green, grey, red, yellow
Background	If you don't like any of the color styles, you can enter your own color in hex format (e.g. # cce6ff).
Border	Creates a border color. Apply only when you use a custom background color instead of the color style (which already uses its own border color).
Padding	Distance from box to box content. Default value: 20px. You can set this to any other pixel-value or simple enter 0 for now padding.
