Templates download/Banner

Starting with BlueSpice 4.3, an identical template "Bannerbox" is already preloaded. Therefore, importing this template is no longer necessary.

This template creates a page banner that you can include on portal pages, for example. You can see an example here in the Helpdesk on the page [Community](#).

Importing the template

The import file is included in the archive file *HW-banner.zip*. Unpack the zip file first.

On the page *Special:Import* follow these steps:

1. **Select file** and choose *HW-banner.xml*.
2. **Enter** an Interwiki prefix. Since this field is required, simply add *hw* (for hallowelt).
3. **Keep** the selection *Import to default locations*.
4. **Click** *Upload file...*

The template is now available in your wiki.

Pages included in the import

The xml import creates the following files in your wiki:

- Template:Banner
- Template:Banner/styles.css

Creating a banner

1. From the Visual Editor *Insert > Template* menu, add the template "Banner".

2. Click on the inserted template to view the available parameters for formatting the look of the banner.
