### Lunch talk: Multilingual wiki

#### Supporting a multilingual wiki

#### "Smart" language switchers

##### Language support

options to define which languages are used in the wiki

## Switching pages

a mechanism to automatically switch between the language versions of a page

## Tracking

a property that tracks the page language for each page (supported in BlueSpice pro)

fallback: categories track the page language (BlueSpice free)

## Support for display title

needed for the subpage-technique

## Switcher comparison

- **Languages:** subpages
- **InterLanguages:** unrelated pages

## User language support

### Based on system messages

- imported with language switcher template
- needs to be checked for `{{CONTENTLANGUAGE}}`

`{{int:message name}}`

- Translates the **interface** message into the user language
- `{{int:lang}}`

### Add or switch content

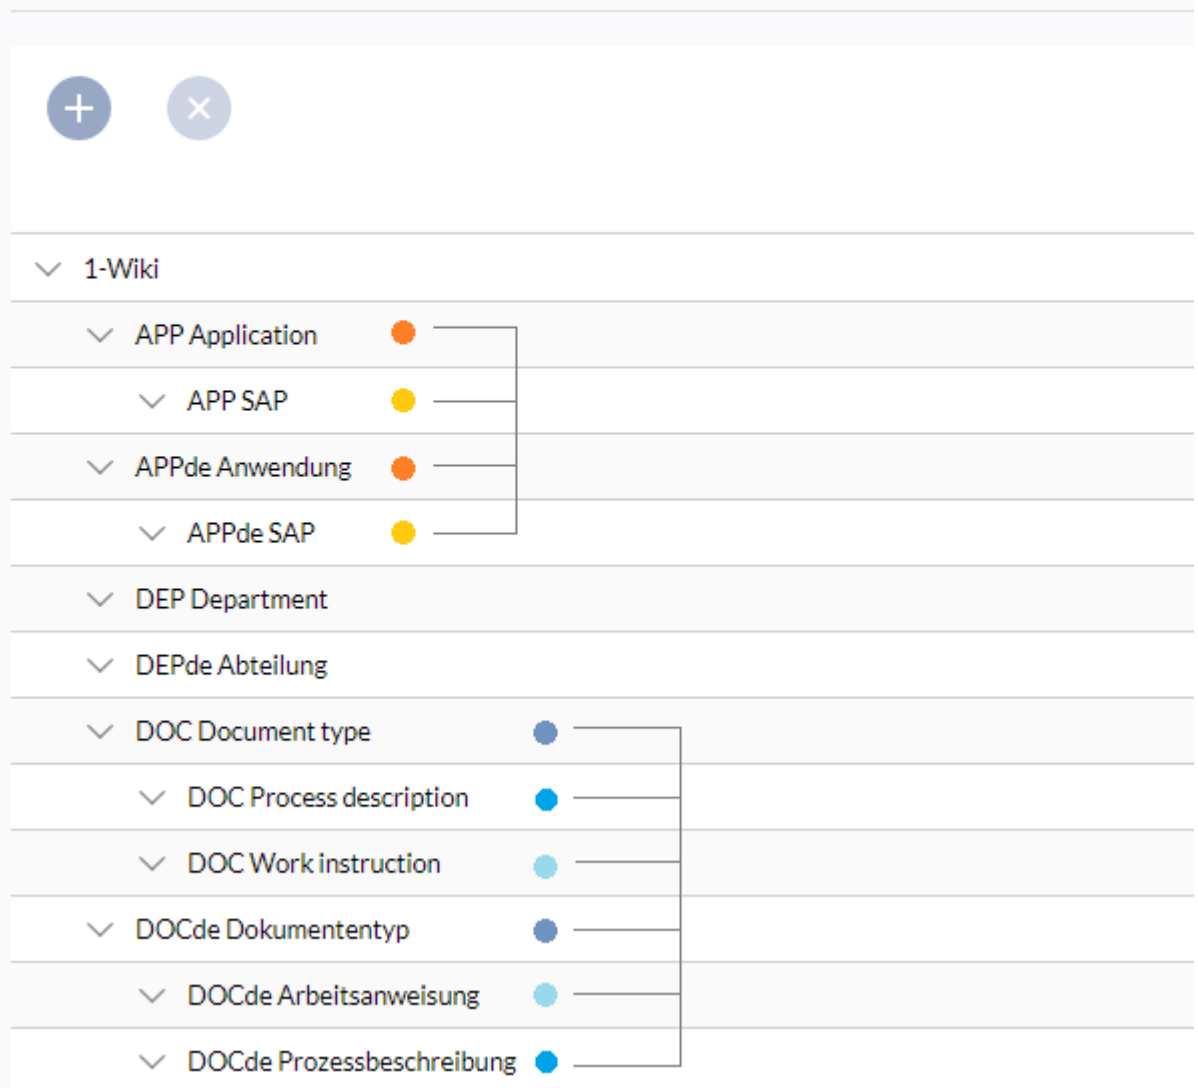

- Switch the entire page content
- Show additional content

## Support templates/forms

Switch labels

## Category system

### Category manager

## Further considerations

- Ad-hoc on-page translation (DeepL) -> duplicate page to make translation permanent
- Improvements to sidebar regarding language support
- MediaWiki translation extension
